1 Overview

The Third Party AltEVV interface is intended for Third Party EVV Vendors to provide program visit data to the Sandata Aggregator. This includes clients, employees, visits, and their associated calls as well as the ability to send data related to visit modifications. Visits are considered to be completed when all required information has been supplied for the visit and all visit exceptions have been remediated. Sandata will verify that visits received pass all program edit rules on receipt. Note that the expectation is that all visit changes will be supplied along with the final completed visit.

The addendum to the generic specification is intended to document all required data elements and attributes that have values specific to your program. All expected values, formatting and validation rules should be identified for each element, where applicable.

Complete Third Party AltEVV interface transmission guidelines may be found in the generic specification provided during Implementation.

1.1 Intended Audience

The intended audience of this document is:

- Project Management and Technical teams at Sandata.
- Project Management and Technical teams who will be implementing this interface.

1.2 AltEVV Interface Transmission Guidelines

- File Format: JSON
- File Delivery: via RESTful API

1.3 Program Specific Assumptions & Business Policies

- Scope of Data: Completed visits

2 Data File Layout

The following tables reflect all required fields in the Third Party Alternative EVV System Specification. This document may be distributed to all providers and used as a guide in order to ensure data consistency across the network. This will also allow Sandata to properly read all incoming files and process the data accordingly.

Required Segment definitions:

- Data segments may be required or optional. When sending data included in a particular segment, all required fields must be provided.
- If a data segment is optional and will not be sent, you may disregard all data fields including those that are required. The concept of required fields only applies when any given data segment is being sent to Sandata.

Required Field definitions:

- Required – data element *must* be provided on import file, otherwise, the record will be rejected
- Optional – vendor may choose to send data element or not. Record will not be rejected if this field is null.
- Conditional – specific scenarios exist where this field is required, other scenarios where this field may not apply and should not be sent. Conditional rules (or scenarios) will be detailed in the field description.

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
<p>Provider Identification: Required. Note that this element will be required as part of the header information provided for all three types of transmissions. This information will be compared to the connection being used within the interface to ensure that the transmission is appropriate. If this match cannot be validated, the transmission will be rejected.</p> <p>As part of the implementation process, required fields may be adjusted and the available fields may be reduced based on the program specifics.</p>						
1	ProviderQualifier	Identifier being sent as the unique identifier for the provider.	20	String	Yes	Other
2	ProviderID	Unique identifier for the agency.	50	String	Yes	<p>The unique identifier for provider will be in one of two possible formats:</p> <ul style="list-style-type: none"> a) Location code (3 digit ID) + NPI (10 digits) b) Location code (3 digit ID) + API (8 char alphanum)

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
Client General Information: Required.						
1	ClientID	Assigned client_id. If a value is assigned by another system. Note that this value can be automatically assigned by Sandata EVV.	10	String	Optional	DO NOT SEND / SANDATA ASSIGNED
2	ClientFirstName	Client's First Name. Characters allowed: A-Z ' . - space	30	String	Yes	LIVE DATA
3	ClientMiddleInitial	Client's Middle Initial	1	String	Optional	LIVE DATA
4	ClientLastName	Client's Last Name. Characters allowed: A-Z ' . - space	30	String	Yes	LIVE DATA
5	ClientQualifier	Value being sent to unique identify the client.	20	String	Yes	ClientOtherID
6	ClientMedicaidID	Unique ID provided by the State Medicaid program to the client.	64	String	Yes	Client Medicaid ID value FORMAT: 10 DIGITS
7	ClientIdentifier	Payer assigned client identifier identified by ClientQualifier.	64	String	Yes	Client Medicaid ID value FORMAT: 10 DIGITS
8	MissingMedicaidID	Indicator that a patient is a newborn. If this value is provided, ClientMedicaidID will be ignored and will be valid as null.	5	String	Optional	True False
9	SequenceID	The Third Party EVV visit sequence ID to which the change applied.	16	Integer	Yes	If TIMESTAMP is used: YYYYMMDDHHMMSS (Numbers only; no characters)
10	ClientCustomID	Additional client user-defined ID. Commonly used to customize the built-in ClientID within the system. RULE: Must be provided if billing is in scope. May be equal to another ID provided.	24	String	Conditional	DO NOT PROVIDE
11	ClientOtherID	Additional client user-defined ID. Commonly used to store client's ID from another system. This value is used to match the client to an existing record during import. RULE: If ClientSSN is provided, this field is not required.	24	String	Conditional	FORMAT: 10 DIGITS CLIENT MEDICAID ID
12	ClientSSN	Client's social security number.	9	String	Conditional	DO NOT PROVIDE

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
		RULE: If the field is left empty, ClientOtherID must be populated.				
13	ClientTimezone	Client's primary time zone.	64	String	Yes	See Appendix 5 for valid values
Client Address: REQUIRED. At least one record for each beneficiary is required.						
1	ClientAddressType	Client address. Note that multiple of the same type of address can be provided.	12	String	Yes	Home Business Other
2	ClientAddressIsPrimary	One address must be designated as primary.	5	String	Yes	True False
3	ClientAddressLine1	Street Address Line 1 associated with this address. Characters allowed: Alphanumeric _ . ' - # , / space	30	String	Yes	LIVE DATA
4	ClientAddressLine2	Street address line 2 associated with this address. Characters allowed: Alphanumeric _ . ' - # , / space	30	String	Optional	LIVE DATA
5	ClientCounty	County associated with this address Characters allowed: A-Z ' . - space	25	String	Optional	LIVE DATA
6	ClientCity	City associated with this address. A-Z . - space	30	String	Yes	LIVE DATA
7	ClientState	State associated with this address.	2	String	Yes	Format: 2 char standard state abbreviation
8	ClientZip	Zip Code associated with this address. If additional 4 digits are not known, provide zeros.	9	String	Yes	Format: #####
9	ClientAddressLongitude	Calculated for each address.	20	Decimal	Optional	LIVE DATA
10	ClientAddressLatitude	Calculated for each address.	19	Decimal	Optional	LIVE DATA
Client Phone: Optional.						
1	ClientPhoneType	Client Phone. Note that multiple of the same type can be provided.	12	String	Optional	Home Mobile Business Other
2	ClientPhone	Client phone number.	10	String	Required	FORMAT: #####

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
Employee General Information: Optional.						
1	EmployeeQualifier	Value being sent to uniquely identify the employee.	20	String	Yes	EmployeeCustomID
2	EmployeeIdentifier	Employee identifier identified by EmployeeQualifier. If employee information is received from the payer, this information will be used to link the received Third Party EVV information with the payer information provided and should be defined as the same value.	9	String	Yes	Vendor Unique ID for the Employee (NOTE: 9 CHAR MAX)
3	EmployeeOtherID	Unique employee identifier in the external system.	64	String	Optional	DO NOT PROVIDE
4	SequenceID	The Third Party EVV visit sequence ID to which the change applied	16	Integer	Yes	If TIMESTAMP is used: YYYYMMDDHHMMSS (Numbers only; no characters)
5	EmployeeSSN	Employee Social Security Number. Employee SSN may be required depending on the program rules.	9	String	Yes	FORMAT: 0000#### Masked: Four zeros + Last 5 digits of SSN
6	EmployeeLastName	Employee's Last Name Characters allowed: A-Z ' . – space	30	String	Yes	LIVE DATA
7	EmployeeFirstName	Employee's First Name Characters allowed: A-Z ' . – space	30	String	Yes	LIVE DATA
8	EmployeeEmail	Employee's Email Address	64	String	Optional	Format: xxx@xxx.xxx Validation Rules: @ and extension (.xxx) are required to validate an address.
9	EmployeeManagerEmail	Email of the employee's manager	64	String	Optional	Format: xxx@xxx.xxx Validation Rules: @ and extension (.xxx) are required to validate an address.
10	EmployeeAPI	Employee client's alternate provider identifier or Medicaid ID	25	String	Optional	DO NOT PROVIDE
11	EmployeePosition	Valid values include: HHA, HCA, RN, LPN, PCA If multiple positions, send primary.	3	String	Optional	HHA HCA RN LPN PCA

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
12	EmployeeHireDate	Employee's date of hire.	10	Date	Optional	Format: YYYY-MM-DD
13	EmployeeEndDate	Employee's HR recorded end date.	10	Date	Optional	Format: YYYY-MM-DD
Visit General Information: Required.						
1	VisitOtherID	Visit identifier in the external system	50	String	Yes	LIVE DATA
2	SequenceID	The Third Party EVV visit sequence ID assigned to this record.	16	Integer	Yes	If TIMESTAMP is used: YYYYMMDDHHMMSS (Numbers only; no characters)
3	EmployeeQualifier	Value being sent to uniquely identify the employee.	20	String	Yes	EmployeeCustomID
4	EmployeeOtherID	Unique employee identifier in the external system, if any.	64	String	Optional	DO NOT PROVIDE
5	EmployeeIdentifier	Employee identifier identified by EmployeeQualifier. If employee information is received from the payer, this information will be used to link the received Third Party EVV information with the payer information provided and should be defined as the same value.	9	String	Yes	Vendor Unique ID for the Employee (NOTE: 9 CHAR MAX)
6	GroupCode	This visit was part of a group visit. Group Code is used to reassemble all members of the group.	6	String	Optional	LIVE DATA
7	ClientIDQualifier	Value being sent to unique identify the client.	20	String	Yes	ClientOtherID
8	ClientID	Identifier used in the client element.	64	String	Yes	FORMAT: 10 DIGITS ClientMedicaidID value
9	ClientOtherID	Additional client user-defined ID. Commonly used to store client's ID from another system. RULE: Provide this value if also included in the Client_General segment.	24	String	Conditional	FORMAT: 10 DIGITS ClientMedicaidID value
10	VisitCancelledIndicator	True/false – allows a visit to be cancelled / deleted based on defined rules.	5	String	Yes	True False
11	PayerID	Sandata EVV assigned ID for the payer.	64	String	Yes	See Appendix 1 PayerID column
12	PayerProgram	The program associated to the visit.	9	String	Yes	See Appendix 1 ProgramID column
13	ProcedureCode	This is the billable procedure code which would be mapped to the associated service.	5	String	Yes	See Appendix 2 HCPCS column
14	Modifier1	Modifier for the HCPCS code for the 837. Up to 4 of these are allowed.	2	String	Optional	See Appendix 2 Modifier columns
15	Modifier2	Modifier for the HCPCS code for the 837. Up to 4 of these are allowed.	2	String	Optional	See Appendix 2 Modifier columns
16	Modifier3	Modifier for the HCPCS code for the 837. Up to 4 of these are allowed.	2	String	Optional	See Appendix 2 Modifier columns

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
17	Modifier4	Modifier for the HCPCS code for the 837. Up to 4 of these are allowed.	2	String	Optional	See Appendix 2 Modifier columns
18	VisitTimeZone	Visit primary time zone. Should be provided if the visit is occurring in a time zone other than that of the client.	64	String	Yes	See Appendix 5 TimeZoneCode column
19	ScheduleStartTime	Activity / Schedule start date and time. This field is generally required but may be omitted if the schedule is denoting services that can happen at any time within the service date	20	DateTime	Optional	FORMAT: YYYY-MM-DDTHH:MM:SSZ
20	ScheduleEndTime	Activity / Schedule end date and time. This field is generally required but may be omitted if the schedule is denoting services that can happen at any time within the service date	20	DateTime	Optional	FORMAT: YYYY-MM-DDTHH:MM:SSZ
21	AdjinDateTime	Adjusted in date/time if entered manually. Otherwise the actual date/time received. Adjusted times are used when a visit was captured with or recorded with incorrect times. For instance, a caregiver forgets to sign out of a current visit for several hours. The agency can “adjust” the time to reflect the actual visit times. In Sandata systems when visit time is adjusted the system will update the adjusted time In and out for that record.	20	DateTime	Optional	FORMAT: YYYY-MM-DDTHH:MM:SSZ
22	AdjOutDateTime	Adjusted out date/time if entered manually. Otherwise the actual date/time received. Adjusted times are used when a visit was captured with or recorded with incorrect times. For instance, a caregiver forgets to sign out of a current visit for several hours. The agency can “adjust” the time to reflect the actual visit times. In Sandata systems when visit time is adjusted the system will update the adjusted time In and out for that record.	20	DateTime	Optional	FORMAT: YYYY-MM-DDTHH:MM:SSZ
23	BillVisit	True/False. If the visit is going to be billed, should be sent as Y. Otherwise N.	5	String	Optional	True False
24	HoursToBill	Hours that are going to be billed.	99.999	Decimal	Optional	LIVE DATA

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
25	HoursToPay	If payroll is in scope for the payer program, the hours to pay.	99.999	Decimal	Optional	LIVE DATA
26	Memo	Associated free form text	512	String	Optional	LIVE DATA
Calls: If calls are not provided, adjusted times must be included in the parent visit element. Calls include any type of clock in or clock out depending on system capabilities. Note that some vendor systems may not record some visit activity as calls. If this is the case, the call element can be omitted. Sandata will treat visit information without calls as manually entered. This is an OPTIONAL segment.						
1	CallExternalID	Call identifier in the external system	16	String	Yes	LIVE DATA
2	CallDateTime	Event date time. Must be at least to the second.	20	Date Time	Yes	FORMAT: YYYY-MM-DDTHH:MM:SSZ
3	CallAssignment	Description of the call for EVV purposes.	10	String	Yes	Time In Time Out Other
4	GroupCode	This visit was part of a group visit. Group Code is used to reassemble all members of the group. This is a unique identifier sent from the vendor system which is associated to all members of the group visit.	6	String	Optional	LIVE DATA
5	CallType	The type of device used to create the event. Any call with GPS data collected should be identified as Mobile. FVV should be used for any type of Fixed verification device.	20	String	Yes	Telephony Mobile FVV Manual Other
6	ProcedureCode	This is the billable procedure code which would be mapped to the associated service.	5	String		See Appendix 2 HCPCS column
7	ClientIdentifierOnCall	ClientIdentifier entered during the call with the member.	10	String	Yes	LIVE DATA
8	MobileLogin	Login used if a mobile application is in use for GPS calls. RULE: Required if CallType = Mobile.	64	String	Conditional	LIVE DATA
9	CallLatitude	GPS latitude recorded during event. Latitude has a range of -90 to 90 with a 15 digit precision. RULE: Required for CallType = Mobile Exception Info: If CallLatitude and CallLongitude are outside of the 1 mile radius for the visit location in the ClientAddress section, you will receive the GPS Distance Exception.	19	Decimal	Conditional	LIVE DATA
10	CallLongitude	GPS longitude recorded during event. Longitude has a range of -180 to 180 with a 15 digit precision.	20	Decimal	Conditional	LIVE DATA

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
		<p>RULE: Required for CallType = Mobile.</p> <p>Exception Info: If the CallLatitude and CallLongitude is outside of the 1 mile radius for one of the address's listed in the ClientAddress section, you will receive the GPS Distance Exception.</p>				
11	Location	<p>Location of the visit – this is a free text field. Characters allowed: Alphanumeric _ . ' - # , / space</p>	25	String	Optional	LIVE DATA
12	TelephonyPIN	<p>PIN for telephony. Identification for the employee using telephony.</p> <p>RULE: Required if CallType = Telephony.</p>	9	String	Conditional	LIVE DATA
13	OriginatingPhoneNumber	<p>Originating phone number for telephony.</p> <p>RULE: Required if CallType = Telephony.</p>	10	String	Conditional	FORMAT: #####
Visit Exception Acknowledgement: This is a CONDITIONAL segment and must be sent when exceptions exist.						
1	ExceptionID	ID for the exception being acknowledged.	2	String	Required	See Appendix 4 ExceptionCode column
2	ExceptionAcknowledged	True/False	5	String	Optional	True False
Visit Changes: This is a CONDITIONAL segment. If there are any updates to records, VisitExceptionAcknowledgments or manual entries, this segment must be sent for each change to the visit record.						
1	SequenceID	The Third Party EVV visit sequence ID to which the change applied	16	String	Yes	If TIMESTAMP is used: YYYYMMDDHHMMSS (Numbers only; no characters)
2	ChangeMadeBy	The unique identifier of the user, system or process that made the change. This could be a system identifier for the user or an email. Could also be a system process, in which case it should be identified.	64	String	Yes	LIVE DATA
3	ChangeDateTime	Date and time when change is made. At least to the second.	20	Date Time	Yes	FORMAT: YYYY-MM-DDTHH:MM:SSZ
4	GroupCode	This visit was part of a group visit. GroupCode is used to reassemble all members of the group.	6	String	Optional	LIVE DATA
5	ReasonCode	Reason Code associated with the change.	4	String	Optional	See Appendix 3 ReasonCode column

Index	Element [Column Name]	Description	Max Length	Type	Required?	Expected Value(s) Format / Validation Rules
6	ChangeReasonMemo	Reason/Description of the change being made if entered. Note that this is a conditional field only required when a visit modification is made and where a reason note is required. If the reason note is required and one is not provided, this visit modification would be rejected.	256	String	Conditional	See Appendix 3 NoteRequired? Column
7	ResolutionCode	If the program is implemented to use resolution codes and a resolution code is required for each visit modification change, then this field is required in order for the visit modification record not to be rejected. Currently this is the only resolution code available for use.	4	String	Conditional	"A" = Written Documentation Maintained
Tasks: If you wish to match tasks from the original system to those allowed from the Task Appendix you can transfer those using this section. This is an OPTIONAL segment.						
1	TaskID	TaskID, this taskID must map to the Task IDs used for the agency in the Sandata system	4	String	Yes	See Appendix 6 Task ID column for specific values
2	TaskReading	Task reading	6	String	Optional	LIVE DATA
3	TaskRefused	True, False	5	String	Optional	True False

Appendices

1 Payers & Programs

Payer ID	Program/Waiver Name	Program ID	Programs & Waivers Covered
DHBFFS	North Carolina Department of Health Benefits - FFS	PCS	Personal Care Services
DHBFFS	North Carolina Department of Health Benefits - FFS	CAPC	Community Alternatives Program for Children
DHBFFS	North Carolina Department of Health Benefits - FFS	CAPDA	Community Alternatives Program for Disabled Adults
DHBFFS	North Carolina Department of Health Benefits - FFS	CAPCD	Community Alternatives Program for Disabled Adults - Consumer Directed

2 Services & Modifiers

Payer	Program	HCPCS	Mod1	Mod2	Mod3	Mod4	Description
DHBFFS	PCS	99509	HA				PCS Under Twenty-One
DHBFFS	PCS	99509	HB				PCS Adults
DHBFFS	CAPDA	S5125					Attendant care service 15m
DHBFFS	CAPDA	S5125	UN				Attend care Cong 15m
DHBFFS	CAPDA	S5150					In-Home Respite 15m
DHBFFS	CAPC	S5125					CAPC In-Home Aide
DHBFFS	CAPC	S5150					In-Home Respite 15m
DHBFFS	CAPC	T1019					PNA Asst 15m
DHBFFS	CAPC	T1004					Ped In-Home Respite 15m
DHBFFS	CAPC	S9122	TF				In-Home Respite Cong 15m
DHBFFS	CAPC	S9122	TG				PNA Respite Cong 15m
DHBFFS	CAPC	T2027					Personal Care Assist 15m
DHBFFS	CAPC	T2027	TF				Personal Care Asst Cong
DHBFFS	CAPCD	S5135					Personal Care Assist 15m
DHBFFS	CAPCD	S5135	UN				Personal Care Assist Cong 15m
DHBFFS	CAPCD	S5125	UN				Attend care Cong 15m
DHBFFS	CAPCD	S5125					Attendant care service 15m
DHBFFS	CAPCD	S5150					In-Home Respite 15m

3 Reason Codes

Reason Code	Description	Note Required?
1	Caregiver Error	Yes
2	Beneficiary Suspended	Yes
3	Mobile Device Issue	Yes
4	Telephony Issue	Yes
5	Beneficiary in Hospital	Yes
6	Unsafe Environment	Yes
7	Beneficiary Refused Service	Yes
8	Beneficiary No Show	Yes
9	Caregiver No Show	Yes
10	FVV Device not Available	Yes
11	Legally Responsible Party Refused Service	Yes
12	Other	Yes

4 Exceptions

When visits are sent to Sandata via the Alt-EVV API, the Sandata system will calculate “exceptions” based on the incoming data. Business rules are applied to the visit based on the configuration details for a particular customer. These rules may trigger visits to be flagged with exceptions, denoting business rules that are not being met. Visits with exceptions may not be deemed “Approved” or “Verified”, and thus may be excluded from additional processing, such as claims validation or data exports.

Users of the Alt-EVV API have the opportunity to “Acknowledge” the exceptions. This tells the Sandata system that the visit is complete despite the presence of exceptions. Thus, the visit can be treated as “Approved” or “Verified”, so long as all calculated exceptions are marked as “Acknowledged”.

Exception Code	Exception Name	Description
0	Unknown Clients	Exception for a visit that was performed for a client that is not yet entered or not found in the EVV system.
1	Unknown Employees	(Telephonic only) Exception for a visit that was performed by a caregiver who was not yet entered or not found in the EVV system (At the time the visit was recorded).
3	Visits Without In-Calls	Exception thrown when a visit is recorded without an "in" call that began the visit.
4	Visits Without Out Calls	Exception thrown when a visit is recorded without an "out" call that completed the visit.
23	Missing Service	Exception when the service provided during a visit is not recorded or present in the system.
34	Invalid Service	Exception when the service selected for a visit is not valid for the program / recipient of care.

5 Time Zones

Time Zone Code

US/Pacific

6 Tasks

TaskID	Category	Task Description
0010	Bathing / Personal Hygiene	Tub bath or shower
0020	Bathing / Personal Hygiene	Upper body
0030	Bathing / Personal Hygiene	Lower body
0040	Bathing / Personal Hygiene	Tub/shower transfer/position
0050	Bathing / Personal Hygiene	Bed bath
0060	Bathing / Personal Hygiene	Sponge bath
0070	Bathing / Personal Hygiene	Additional transfer (reposition in bed, change occupied bed)
0080	Bathing / Personal Hygiene	Shampoo/hair care
0090	Bathing / Personal Hygiene	Skin care (includes wash face/hands, foot care)
0100	Bathing / Personal Hygiene	Nail care
0110	Bathing / Personal Hygiene	Mouth/oral/denture care
0120	Bathing / Personal Hygiene	Shave
0130	Dressing	Don clothing/shoes/socks
0140	Dressing	Remove clothing/shoes/socks
0150	Dressing	Clothing and shoe fasteners
0160	Dressing	Assist with TEDS
0170	Dressing	Assist with braces/splints
0180	Dressing	Assist with binders
0190	Dressing	Assist with prosthetics
0200	Mobility	Transfer to/from bedr

TaskID	Category	Task Description
0210	Mobility	Ambulation room to room
0220	Mobility	Assist with stairs
0230	Mobility	Passive/active ROM
0240	Mobility	Turn/reposition
0250	Toileting	Remove/pull up/fasten garments
0260	Toileting	Hygiene after toileting
0270	Toileting	Transfer to/from BSC or toilet
0280	Eating	Assist with cutting food
0290	Eating	Assist with feeding
0300	Eating	Assist with utensil usage
0310	Eating	Lift limb to mouth
0320	Eating	Tube feeding
0330	Eating	Clean meal service area
0340	Eating	Clean utensils/dishes, empty trash
0350	Eating	Open packages
0360	Eating	Equipment set up and clean up
0370	Eating	Heat/assemble food
0380	Mobility	Transfer to/from chair
0390	Transfer	To/from bed
0400	Transfer	To/from chair
0410	Transfer	To/from toilet
0420	Transfer	To/from scooter
0430	Transfer	To/from stroller
0440	Transfer	To/from wheelchair
0450	Transfer	to/from vehicle
0460	Personal Hygiene	Shampoo/hair care
0470	Personal Hygiene	Skin care (includes wash face/hands, foot care)
0480	Personal Hygiene	Make up
0490	Personal Hygiene	Nail care/trimming
0500	Personal Hygiene	Mouth/oral/denture care

TaskID	Category	Task Description
0510	Personal Hygiene	Shaving
0520	Additional Tasks	Errands to assist with ADLs (CAP only)
0530	Additional Tasks	BP monitoring
0540	Additional Tasks	Blood glucose monitoring
0550	Additional Tasks	Medication self-administration reminders
0560	Additional Tasks	Break up and remove fecal impaction
0570	Additional Tasks	IV fluid assistive activities
0580	Additional Tasks	O2 therapy
0590	Additional Tasks	Ostomy care/irrigation
0600	Additional Tasks	Sterile dressing change (wound over 48 hours old)
0610	Additional Tasks	Suctioning, nasopharyngeal
0620	Additional Tasks	Suctioning, oropharyngeal
0630	Additional Tasks	Tracheostomy care
0640	Additional Tasks	Urinary catheterization/irrigation
0650	Additional Tasks	Wound irrigation
0660	Additional Tasks	Tube feeding and G-tube management

7 Abbreviations

Abbreviation	Name
ANI	Automatic Number Identification
BYOD	Bring Your Own Device
CDS	Consumer Directed Services
EVV	Electronic Visit Verification
FI	Fiscal Intermediary
GPS	Global Positioning System
IVR	Interactive Voice Response – the underlying system used for telephony
MVV	Mobile Visit Verification
PA	Prior Authorization
PIN	Personal Identity Number
SMC	Sandata Mobile Connect
SSN	Social Security Number
TVV	Telephonic Visit Verification

8 Terminology

Sandata Terminology	Other Possible References
Agency	Agency Provider Provider Account Billing Agency

UAT:

<https://uat-api.sandata.com/interfaces/intake/clients/rest/api/v1.1>

<https://uat-api.sandata.com/interfaces/intake/employees/rest/api/v1.1>

<https://uat-api.sandata.com/interfaces/intake/visits/rest/api/v1.1>

The endpoints accept JSON data and support the HTTP POST method.

Authentication Header

The API endpoints utilize Basic Authentication. Therefore, a valid “Authorization” header must be sent with each request. This header is simply a Base 64 encoded representation of the username and password in the format “username:password”.

The credentials are determined and distributed during implementation.

An example header for “user@example.com” with password “secret” would be:

Authorization: Basic dXNlckBleGFtcGxImNvbTpzZWNYZXQ=

Account Header

In addition to the “Authorization” header, a header denoting the callers EVV “Account” must be sent. The credentials provided are specific to an account, and all data sent must also correspond to that account, or the request will be rejected.

An example of this header would be:

Account: 12345

Alternatively, for MCO customers and other vendors sending data on behalf of multiple EVV accounts, the “EntityGuid” header is used. This ID will be provided by Sandata during implementation.

An example of this header would be:

EntityGuid: 12345

Content-Type Header

As with all RESTful API requests, the “Content-Type” header should also be included:

Content-Type: application/json

Workflow

Interacting with the APIs is a two-step process:

For each element being sent (Client, Employee, Visit), the data for must be received successfully and fully processed before the next type of data can be sent. i.e.

- Step 1 – Send a POST request with the data to the API
- Step 2 – Utilize the “Status” API to check that processing completed successfully
- Step 3 – Send the next type of data

If the call for Status check results in a messageSummary of “The result for the input UUID is not ready yet. Please try again.”, then the sender process must “sleep” and recheck Status until the Status API call returns a messageSummary of either “All records updated successfully.” Or ...”Records uploaded, please check errors/warnings and try again.”

It’s important to note that the processing of a previously sent type of data MUST complete prior submitting the API call for the next type of data.

Clients and Employees should be sent prior to sending visits. This is necessary in order to ensure that client/employee data exists in the Sandata system when a visit is received, in order to avoid errors on visit processing due to missing client and/or employee data.

Details are as follows:

- The first step is to POST the data being sent to the URLs mentioned above in the “API Location” section. When data is sent, the Sandata system will validate the input meets the business requirements, process the data, and return a response.
- The response sends back some key pieces of information. This includes any errors that may have been flagged, as well as a UUID, generated by Sandata, which uniquely identifies the request. See example responses below in the “Sample Response” section.
- After this response is sent, the Sandata system begins processing the data into the system. Since the initial POST has already received a response, callers must use a second endpoint to check on the status of their request.
- To this end, each API is accompanied by an additional endpoint for checking status. This endpoint is reached simply by appending “/status” to the URLs in the “API Location” section above. Calls to this endpoint must utilize the HTTP GET method and send in the UUID that is returned in the response to the POST call.

An example GET request for status for clients, would be sent as follows:

<https://api.sandata.com/interfaces/intake/clients/rest/api/v1.1/status?uuid=8d7c31f7-4a09-41a9-8edd-f9819def58f1>

Sample data can be found below.

In summary, the caller would POST data to the API, receive a response with a UUID, then utilize the “status” endpoint via GET in order to determining if processing was completed and successful.

An example workflow when sending employees, clients, and visits would be:

1. Send POST request with employee data; receive UUID.
2. Utilize UUID to query employee “Status” API; if still processing, sleep and recheck.
3. Once “Status” API for employees indicates processing is finished, send POST request with client data; receive UUID.
4. Utilize UUID to query client “Status” API; if still processing, sleep and recheck.
5. Once “Status” API for client indicates processing is finished, send POST request with visit data; receive UUID.
6. Utilize UUID to query visit “Status” API; if still processing, sleep and recheck.
7. Once “Status” API for visits indicates processing is finished, all data has been transmitted.

Sample POST Data

Below find sample POST bodies for each entity, as well as sample responses in both successful and unsuccessful situations. Note that, based on implementation, not all fields are required to be present. In addition, certain implementations may include custom fields that are not represented in the samples. Please refer to the addendum for a full set of fields and their details.

JSON Employee

```
[{
  "ProviderIdentification": {
    "ProviderQualifier": "SandataID",
    "ProviderID": "123456"
  },
}
```

```
"EmployeeQualifier": "EmployeeSSN",
"EmployeeIdentifier": "999999999",
"EmployeeOtherID": "2222",
"SequenceID": 99811930002,
"EmployeeSSN": "999999999",

```

Sample Responses

See some sample responses below. Note that the samples are provided for employee, but the same pattern is followed for both client and visit.

Employee POST (Successful)

```
{
  "id": "7f6dcd1a-ec5e-4efd-a2d4-1049756016a5",
  "status": "SUCCESS",
  "messageSummary": "The result for the input UUID is not ready yet. Please try again.",
  "data": {
    "uuid": "7f6dcd1a-ec5e-4efd-a2d4-1049756016a5",
    "account": "12345",
    "message": "The result for the input UUID is not ready yet. Please try again.",
```

```
    "reason": "Transaction Received."
  }
}
```

Employee POST (Validation Error)

```
{
  "id": "ea76e9a1-9b29-4f3d-af1c-6b573eb29b76",
  "status": "FAILED",
  "messageSummary": "[1] Records uploaded, please check errors/warnings and try again.",
  "data": [
    {
      "ProviderIdentification": {
        "ProviderID": "123456",
        "ProviderQualifier": "SandataID",
        "ErrorCode": null,
        "ErrorMessage": null
      },
      "EmployeeIdentifier": "999999999",
      "EmployeeOtherID": "2222",
      "SequenceID": 99811930002,
      "EmployeeQualifier": "EmployeeSSN",
      "EmployeeSSN": "999999999",
      "EmployeeLastName": "Employee",
      "EmployeeFirstName": "Test",
    }
  ]
}
```

```
"EmployeeEmail": "dummy@sandata.com",
"EmployeeManagerEmail": "dummymanager@sandata.com",
"EmployeeAPI": "111111111",
"EmployeePosition": "AKN",
"ErrorCode": null,
"ErrorMessage": "ERROR: The EmployeePosition expected format is not correct. The record should satisfy this regular
expression ['HHA|HCA|RN|LPN|PCA']. Invalid Value='AKN'. The record is being rejected."
}
]
}
```

Employee GET (Status)

A sample response to a status GET request that has finished processing is:

```
{
  "id": "73b7a9d7-a79a-45cc-9def-cb789c111f4b",
  "status": "SUCCESS",
  "messageSummary": "All records updated successfully.",
  "data": {
    "uuid": "73b7a9d7-a79a-45cc-9def-cb789c111f4b",
    "account": null,
    "message": "All records updated successfully.",
    "reason": "Transaction Received."
  }
}
```

If the request is not yet finished being processed, the “messageSummary” will be “The result for the input UUID is not ready yet. Please try again.”

```
{
  "id": "873a1d97-0681-402e-8268-b6cad8f2b4b7",
  "status": "SUCCESS",
  "messageSummary": "The result for the input UUID is not ready yet. Please try again.",
  "data": {
    "uuid": "873a1d97-0681-402e-8268-b6cad8f2b4b7",
    "account": "12345",
    "message": "The result for the input UUID is not ready yet. Please try again.",
    "reason": "Transaction Received."
  }
}
```

If the request was processed but failed business rules, an example status would be:

```
{
  "id": "e5de964b-9803-4051-b89b-8a89926e4983",
  "status": "SUCCESS",
  "messageSummary": "[2] Records uploaded, please check errors/warnings and try again.",
  "data": [
    {
```

```
"ProviderIdentification": {  
  "ProviderID": "123456",  
  "ProviderQualifier": "SandataID",  
  "ErrorCode": null,  
  "ErrorMessage": null  
},  
"EmployeeIdentifier": "999999999",  
"EmployeeOtherID": "2222",  
"SequenceID": 99811930002,  
"EmployeeQualifier": "EmployeeSSN",  
"EmployeeSSN": "999999999",  
"EmployeeLastName": "Employee",  
"EmployeeFirstName": "Test",  
"EmployeeEmail": "dummy@sandata.com",  
"EmployeeManagerEmail": "dummymanager@sandata.com",  
"EmployeeAPI": "111111111",  
"EmployeePosition": "RN",  
"ErrorCode": "-709",  
"ErrorMessage": "Version number is duplicated or older than current"  
}  
]  
}
```
