North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Immune Globulins	90291	Cytomegalovirus immune globulin (CMV-IgIV), human, for intravenous use	50 mL	1/1/2000	Cytogam®	cytomegalovirus immune globulin intravenous, human	Indicated for the prophylaxis of cytomegalovirus disease associated with transplantation of kidney, lung, liver, pancreas, and heart. In transplants of these organs other than kidney from CMV seropositive donors into seronegative recipients, prophylactic CMV-IGIV should be considered in combination with ganciclovir.	25.2	N/A	N/A	N/A	Y	Y	3/2024: Rebating Labeler Required field updated to align with policy that submitted NDCs must come from rebating labelers. Update not due to a change in policy.	3/28/2024
Immune Globulins	90371	Hepatitis B Immune Globulin (HBIg), human, for intramuscular use	1 mL	1/1/2000	HyperHEP B® S/D, Nabi-HB®	hepatitis b immune globulin, (human)	Indicated for treatment of acute exposure to blood containing HBsAg, perinatal exposure of infants born to HBsAg-positive mothers, sexual exposure to HBsAg-positive persons and household exposure to persons with acute HBV infection in the following settings: • Acute Exposure to Blood Containing HBsAg: Following either parenteral exposure (needlestick, bite, sharps), direct mucous membrane contact (accidental splash), or oral ingestion (pipetting accident), involving HBsAg-positive materials such as blood, plasma, or serum. • Perinatal Exposure of Infants Born to HBsAg-positive Mothers: Infants born to mothers positive for HBsAg with or without HBeAg. • Sexual Exposure to HBsAg-positive Persons: Sexual partners of HBsAg-positive persons. • Household Exposure to Persons with Acute HBV Infection: Infants less than 12 months old whose mother or primary caregiver is positive for HBsAg. Other household contacts with an identifiable blood exposure to the index patient.	18	N/A	N/A	N/A	Y	Y	3/2024: Rebating Labeler Required field updated to align with policy that submitted NDCs must come from rebating labelers. Update not due to a change in policy.	3/28/2024
Immune Globulins	90375	Rabies Immune Globulin (RIg), human, for intramuscular and/or subcutaneous use	150 IU	1/1/2000	HyperRAB® S/D, HyperRAB®	rabies immune globulin, (human) treated with solvent/detergent, for infiltration and intramuscular administration rabies immune globulin, (human) solution for infiltration and intramuscular injection	HyperRAB S/D: Rabies vaccine and HyperRAB S/D should be given to all persons suspected of exposure to rabies with one exception: persons who have been previously immunized with rabies vaccine and have a confirmed adequate rabies antibody titer should receive only vaccine. HyperRAB S/D should be administered as promptly as possible after exposure, but can be administered up to the eighth day after the first dose of vaccine is given. HyperRAB: Indicated for post exposure prophylaxis, along with rabies vaccine, for all persons suspected of exposure to rabies. Limitations of use: -Persons previously immunized with rabies vaccine that have a confirmed adequate rabies antibody titer should receive only vaccine. -For unvaccinated persons, the combination of HyperRAB and vaccine is recommended for both bite and nonbite exposures regardless of the time interval between exposure and initiation of post-exposure prophylaxis. -Beyond 7 days (after the first vaccine dose), HyperRAB is not indicated since an antibody response to vaccine is presumed to have occurred.	20	N/A	N/A	N/A	Y	Y		4/8/2020
Immune Globulins	90376	Rabies Immune Globulin, heat-treated (RIg-HT), human, for intramuscular and/or subcutaneous use	150 IU	1/1/2000	Imogam® Rabies – HT	rabies immune globulin (human) USP, heat treated	Indicated for individuals suspected of exposure to rabies, particularly severe exposure, with one exception: persons who have been previously immunized with rabies vaccine prepared from human diploid cells (HDCV) in a pre-exposure or post exposure treatment series should receive only vaccine. Persons who have been previously immunized with rabies vaccines other than HDCV, RVA (Rabies Vaccine Adsorbed), or PCEC (Purified Chick Embryo Cell Vaccine) vaccines should have confirmed adequate rabies antibody titers if they are to receive only vaccine.	20	N/A	N/A	N/A	Y	Y		9/21/2018
Immune Globulins	90377	Rabies immune globulin, heat- and solvent/detergent-treated (RIg-HT S/D), human, for intramuscular and/or subcutaneous use	150 IU	1/1/2021	Kedrab™	rabies immune globulin (human) solution for intramuscular injection	Indicated for passive, transient post-exposure prophylaxis of rabies infection to persons of all ages when given immediately after contact with a rabid or possibly rabid animal. Kedrab should be administered concurrently with a full course of rabies vaccine. • Do not exceed the recommended dose of Kedrab because this can partially suppress active production of rabies. • Do not administer additional doses of Kedrab, even if the antibody response to vaccination is delayed.	20	N/A	N/A	N/A	Y	Y		9/21/2022
Vaccines	90380	Respiratory syncytial virus, monoclonal antibody, seasonal dose; 0.5 mL dosage, for intramuscular use	0.5 mL	7/17/2023	Beyfortus™	nirsevimab-alip injection, for intramuscular use (0.5 mL dosage)	Indicated for the prevention of RSV lower respiratory tract disease in: • Neonates and infants born during or entering their first RSV season. • Children up to 24 months of age who remain vulnerable to severe RSV disease through their second RSV season.	1	N/A	24 months	N/A	Y	N		9/28/2023
Vaccines	90381	Respiratory syncytial virus, monoclonal antibody, seasonal dose; 1 mL dosage, for intramuscular use	1 mL	7/17/2023	Beyfortus™	nirsevimab-alip injection, for intramuscular use (1 mL dosage)	Indicated for the prevention of RSV lower respiratory tract disease in: • Neonates and infants born during or entering their first RSV season. • Children up to 24 months of age who remain vulnerable to severe RSV disease through their second RSV season.	2	N/A	24 months	N/A	Y	N		9/28/2023
Immune Globulins	90389	Tetanus Immune Globulin (TIg), human, for intramuscular use	250 units (1 mL)	1/1/2000	HyperTET® S/D	tetanus immune globulin (human)	Indicated for prophylaxis against tetanus following injury in patients whose immunization is incomplete or uncertain. It is also indicated, although evidence of effectiveness is limited, in the regimen of treatment of active cases of tetanus.	2	N/A	N/A	N/A	Y	Y		6/4/2019
Immune Globulins	90396	Varicella-zoster Immune Globulin (VZIG), human, for intramuscular use (Code Price is per 1 vial = 125 units)	125 units (1 vial)	1/1/2000	Varizig®	varicella zoster immune globulin (human) for intramuscular administration only	Indicated for post exposure prophylaxis in high risk individuals. High risk groups include: • immunocompromised children and adults, • newborns of mothers with varicella shortly before or after delivery, • premature infants, • infants less than one year of age, • adults without evidence of immunity, • pregnant women. Administration is intended to reduce the severity of varicella.	10	N/A	N/A	N/A	Y	Y		7/3/2018
Vaccines	90585	Bacillus Calmette-Guerin Vaccine (BCG) for tuberculosis, live, for percutaneous use.	50 mg	1/1/2000	BCG Vaccine	bacillus Calmette-Guérin vaccine (BCG) for tuberculosis, live, for percutaneous use.	Indicated for the prevention of tuberculosis (TB) in people not previously infected with Mycobacterium tuberculosis, who are at high risk for exposure.	1	N/A	N/A	N/A	Y	N		7/2/2018
Vaccines	90589	Chikungunya virus vaccine, live attenuated, for intramuscular use	0.5 mL (1 dose)	1/1/2024	Ixchiq	Chikungunya vaccine, live solution for intramuscular injection	Chikungunya Vaccine is indicated for the prevention of disease caused by chikungunya virus (CHIKV) in individuals 18 years of age and older who are at increased risk of exposure to CHIKV.	1	18 years	N/A	N/A	Y	N		3/22/2024

Vaccines	90611	Smallpox and monkeypox vaccine, attenuated vaccinia virus, live, non-replicating, preservative free, 0.5 mL dosage, suspension, for subcutaneous use	0.5 mL	7/26/2022	Jynneos™	smallpox and monkeypox vaccine, live, non-replicating suspension for subcutaneous and intradermal injection	FDA-Approved Indications: Indicated for prevention of smallpox and monkeypox disease in adults 18 years of age and older determined to be at high risk for smallpox or monkeypox infection. Emergency Use Authorization: The US Food and Drug Administration (FDA) has issued an Emergency Use Authorization (EUA) for the emergency use of Jynneos for: • active immunization by subcutaneous injection for prevention of monkeypox disease in individuals less than 18 years of age determined to be at high risk for monkeypox infection, and • active immunization by intradermal injection for prevention of monkeypox disease in individuals 18 years of age and older determined to be at high risk for monkeypox infection. Justification for Emergency Use of Jynneos During the Monkeypox Public Health Emergency There is currently an outbreak of monkeypox disease caused by monkeypox virus, an orthopoxvirus related to variola (the virus that causes smallpox disease). Following a 3-17 day incubation period, individuals infected with monkeypox virus develop painful lesions that progress sequentially through macular, papular, vesicular, and pustular stages, followed by scabbing over and desquamation. Lesions may occur anywhere on the body and may be limited to a single site or may be disseminated across many sites. Individuals may or may not experience prodromal symptoms (e.g., chills, lymphadenopathy, malaise, myalgias, or headache). Respiratory symptoms (e.g., sore throat, nasal congestion, or cough) can also occur. The clinical presentation of monkeypox disease is typically milder than smallpox disease but can be fatal, particularly in severely immunocompromised individuals who do not receive antiviral therapy. During the current monkeypox outbreak, monkeypox cases and exposures have occurred in individuals across a wide range of ages, including infants and children. Jynneos is not approved for these uses.	2	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	N	Indication Specific Age Restrictions: FDA-Approved Indications: 18 years of age and older Emergency Use Authorization: N/A	5/31/2024
Vaccines	90619	Meningococcal conjugate vaccine, serogroups A, C, W, Y, quadrivalent, tetanus toxoid carrier (MenACWY-TT), for intramuscular use	0.5 mL	7/1/2019	MenQuadfi™	meningococcal [Groups A, C, Y, W] conjugate vaccine, solution for intramuscular injection	Indicated for active immunization for the prevention of invasive meningococcal disease caused by Neisseria meningitidis serogroups A, C, W, and Y. MenQuadfi vaccine is approved for use in individuals 2 years of age and older. MenQuadfi does not prevent N. meningitidis serogroup B disease.	1	2 years	N/A	N/A	Y	N		8/5/2021
Vaccines	90620	Meningococcal recombinant protein and outer membrane vesicle vaccine, serogroup B (MenB-4C), 2 dose schedule, for intramuscular use	0.5 mL	2/1/2015	Bexsero®	meningococcal group b vaccine suspension for intramuscular injection	Indicated for active immunization to prevent invasive disease caused by Neisseria meningitidis serogroup B. Bexsero is approved for use in individuals 10 through 25 years of age.	2	10 years	25 years	N/A	Y	N	12/2023: Maximum age restriction updated to align with FDA-approved and ACIP-recommended maximum age effective 10/1/2023.	1/26/2024
Vaccines	90621	Meningococcal recombinant lipoprotein vaccine, serogroup B (MenB-FHbp), 2 or 3 dose schedule, for intramuscular use	0.5 mL	2/1/2015	Trumenba®	meningococcal group b vaccine suspension for intramuscular injection	Indicated for active immunization to prevent invasive disease caused by Neisseria meningitidis serogroup B. Trumenba is approved for use in individuals 10 through 25 years of age.	2	10 years	25 years	N/A	Y	N	12/2023: Maximum age restriction updated to align with FDA-approved and ACIP-recommended maximum age effective 10/1/2023.	1/26/2024
Vaccines	90623	Meningococcal pentavalent vaccine, conjugated Men A, C, W, Y- tetanus toxoid carrier, and Men B-FHbp, for intramuscular use	0.5 mL	1/1/2024	Penbraya™	meningococcal groups A, B, C, W, and Y vaccine, suspension for intramuscular injection	Meningococcal groups A, B, C, W, and Y vaccine, suspension for intramuscular injection is indicated for active immunization to prevent invasive disease caused by *Neisseria meningitidis* serogroups A, B, C, W, and Y. Penbraya is approved for use in individuals 10 through 25 years of age.	1	10 years	25 years	N/A	Y	N	7/2024: Addition to VFC effective 7/18/2024 per DHB request 7/23/2024.	7/29/2024
Vaccines	90625	Cholera vaccine, live, adult dosage, 1 dose schedule, for oral use	1 adult dosage (100 mL)	1/1/2016	Vaxchora®	cholera vaccine, live, oral suspension for oral administration	Indicated for active immunization against disease caused by Vibrio cholerae serogroup O1. Vaxchora is approved for use in persons 2 through 64 years of age traveling to cholera-affected areas. Limitations of Use: • The effectiveness of Vaxchora has not been established in persons living in cholera-affected areas. • The effectiveness of Vaxchora has not been established in persons who have pre-existing immunity due to previous exposure to V. cholerae or receipt of a cholera vaccine. • Vaxchora has not been shown to protect against disease caused by V. cholerae serogroup O139 or other non-O1 serogroups.	1	2 years	64 years	N/A	Y	N		10/27/2023
Vaccines	90626	Tick-borne encephalitis virus vaccine, inactivated; 0.25 mL dosage, for intramuscular use	0.25 mL	7/1/2021	TicoVac™	tick-borne encephalitis vaccine, suspension for intramuscular injection (0.25 mL dose)	Tick-borne encephalitis vaccine is indicated for active immunization to prevent tick-borne encephalitis (TBE). It is approved for use in individuals 1 year of age and older.	1	1 year	15 years	N/A	Y	N	1/2024: Coverage effective 11/10/2023 6/2024: Rebating Labeler Required field updated to align with policy that submitted vaccine NDCs do not need to come from rebating labelers. Update not due to a change in policy.	6/7/2024

Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Vaccines	90678	Respiratory syncytial virus vaccine, preF, subunit, bivalent, for intramuscular use	0.5 mL	1/1/2023	Abrysvo™	respiratory syncytial virus vaccine solution for intramuscular injection	Indicated for: - active immunization for the prevention of lower respiratory tract disease (LRTD) caused by respiratory syncytial virus (RSV) in individuals 60 years of age and older. - active immunization of pregnant individuals at 32 through 36 weeks gestational age for the prevention of lower respiratory tract disease (LRTD) and severe LRTD caused by respiratory syncytial virus (RSV) in infants from birth through 6 months of age.	1	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	N	Indication specific age restrictions: • Active immunization for the prevention of LRTD caused by RSV: 60 years of age and older • Active immunization of pregnant individuals at 32 through 36 weeks gestational age for the prevention of LRTD and severe LRTD caused by RSV in infants from birth through 6 months of age: use after menarche 1/2024: Addition to VFC Effective 1/2/2024 per DHB Request 12/21/2023	1/26/2024
Vaccines	90679	Respiratory syncytial virus vaccine, preF, recombinant, subunit, adjuvanted, for intramuscular use	0.5 mL	5/3/2023	Arexvy	respiratory syncytial virus vaccine, adjuvanted suspension for intramuscular injection	Indicated for active immunization for the prevention of lower respiratory tract disease (LRTD) caused by respiratory syncytial virus in: - individuals 60 years of age and older; - individuals 50 through 59 years of age who are at increased risk for LRTD caused by RSV.	1	60 years	N/A	N/A	Y	N		7/29/2024
Vaccines	90680	Rotavirus vaccine, pentavalent (RV5), 3 dose schedule, live, for oral use	2 mL	7/1/2005	RotaTeq®	rotavirus vaccine, live, oral, pentavalent	Indicated for the prevention of rotavirus gastroenteritis in infants and children caused by types G1, G2, G3, G4, and G9 when administered as a 3-dose series to infants between the ages of 6 to 32 weeks.	2	6 weeks	8 months	N/A	Y	N	ACIP recommends for 6 weeks of age to 8 months of age	3/30/2023
Vaccines	90681	Rotavirus vaccine, human, attenuated (RV1), 2 dose schedule, live, for oral use	1 mL	1/1/2008	Rotarix	rotavirus vaccine, live, oral	Indicated for the prevention of rotavirus gastroenteritis caused by G1 and non-G1 types (G3, G4, and G9). Rotarix is approved for use in infants 6 weeks to 24 weeks of age.	2	6 weeks	8 months	N/A	Y	N	ACIP recommends for 6 weeks of age to 8 months of age	3/30/2023
Vaccines	90683	Respiratory syncytial virus vaccine, mRNA lipid nanoparticles, for intramuscular use	0.5 mL	1/1/2024	mRESVIA™	respiratory syncytial virus vaccine injectable suspension, for intramuscular use	Respiratory Syncytial Virus Vaccine is a vaccine indicated for active immunization for the prevention of lower respiratory tract disease (LRTD) caused by respiratory syncytial virus (RSV) in individuals 60 years of age and older.	1	60 years	N/A	N/A	Y	N		7/29/2024
Vaccines	90690	Typhoid vaccine, live, oral	4 capsules	1/1/2000	Vivotif®	typhoid vaccine live oral Ty21a	Indicated for immunization of adults and children greater than 6 years of age against disease caused by Salmonella typhi. Routine typhoid vaccination is not recommended in the United States of America. Selective immunization against typhoid fever is recommended for the following groups: 1) travelers to areas in which there is a recognized risk of exposure to S. typhi, 2) persons with intimate exposure (e.g. household contact) to a S. typhi carrier, and 3) microbiology laboratorians who work frequently with S. typhi. There is no evidence to support the use of typhoid vaccine to control common source outbreaks, disease following natural disasters or in persons attending rural summer camps.	1	6 years	N/A	N/A	Y	N		10/27/2023
Vaccines	90691	Typhoid vaccine, Vi capsular polysaccharide (ViCPs), for intramuscular use	0.5 mL	1/1/2000	Typhim Vi®	typhoid vi polysaccharide vaccine	Indicated for active immunization for the prevention of typhoid fever caused by S typhi and is approved for use in persons two years of age or older. Immunization with Typhim Vi vaccine should occur at least two weeks prior to expected exposure to S typhi. Typhim Vi vaccine is not indicated for routine immunization of individuals in the United States (US). Selective immunization against typhoid fever is recommended under the following circumstances: 1) travelers to areas where a recognized risk of exposure to typhoid exists, particularly ones who will have prolonged exposure to potentially contaminated food and water, 2) persons with intimate exposure (ie, continued household contact) to a documented typhoid carrier, and 3) workers in microbiology laboratories who frequently work with S typhi. An optimal reimmunization schedule has not been established. Reimmunization every two years under conditions of repeated or continued exposure to the S typhi organism is recommended at this time.	1	2 years	N/A	N/A	Y	N		10/27/2023
Vaccines	90696	Diphtheria, tetanus toxoids, acellular pertussis vaccine and inactivated poliovirus vaccine, (DTaP-IPV), when administered to children 4 years through 6 years of age, for intramuscular use	0.5 mL	1/1/2008	Kinrix®, Quadracel™	diphtheria and tetanus toxoids, acellular pertussis adsorbed and inactivated poliovirus vaccine, suspension for intramuscular injection	• Kinrix: A single dose of Kinrix is indicated for active immunization against diphtheria, tetanus, pertussis, and poliomyelitis as the fifth dose in the diphtheria, tetanus, and acellular pertussis (DTaP) vaccine series and the fourth dose in the inactivated poliovirus vaccine (IPV) series in children 4 through 6 years of age whose previous DTaP vaccine doses have been with INFANRIX and/or PEDIARIX for the first three doses and INFANRIX for the fourth dose. • Quadracel: Indicated for active immunization against diphtheria, tetanus, pertussis and poliomyelitis. A single dose of Quadracel is approved for use in children four through six years of age as a fifth dose in the diphtheria, tetanus, pertussis vaccination (DTaP) series, and as a fourth or fifth dose in the inactivated poliovirus vaccination (IPV) series, in children who have received four doses of Pentacel and/or Daptacel vaccine.	1	4 years	6 years	N/A	Y	N		7/2/2018

Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Category	HCPCS Code	HCPCS Description	HCPCS Code Billing Unit	HCPCS Effective Date	Brand Name	Generic Name	FDA Approved Indications (See Package Insert for full FDA approved indication descriptions)	NC Suggested Max Monthly Units	Minimum Age	Maximum Age	Gender Restrictions	NDC Required	Rebating Labeler Required	Comments	Last Modified Date
Drugs	J0278	Injection, amikacin sulfate, 100 mg	100 mg	1/1/2006	N/A	amikacin sulfate injection, solution	Indicated in the short-term treatment of serious infections due to susceptible strains of Gram-negative bacteria, including Pseudomonas species, Escherichia coli, species of indole-positive and indole-negative Proteus, Providencia species, Klebsiella-Enterobacter-Serratia species, and Acinetobacter (Mima-Herellea) species. Clinical studies have shown amikacin sulfate injection to be effective in bacterial septicemia (including neonatal sepsis); in serious infections of the respiratory tract, bones and joints, central nervous system (including meningitis) and skin and soft tissue; intra-abdominal infections (including peritonitis); and in burns and postoperative infections (including post-vascular surgery). Clinical studies have shown amikacin also to be effective in serious complicated and recurrent urinary tract infections due to those organisms.	150	N/A	N/A	N/A	Y	Y		4/10/2019
Drugs	J0280	Injection, aminophylline, up to 250mg	up to 250 mg	1/1/2000	N/A	aminophylline injection	Indicated as an adjunct to inhaled beta-2 selective agonists and systemically administered corticosteroids for the treatment of acute exacerbations of the symptoms and reversible airflow obstruction associated with asthma and other chronic lung diseases, e.g., emphysema and chronic bronchitis.	217	N/A	N/A	N/A	Y	Y		9/25/2018
Drugs	J0285	Injection, amphotericin B, 50 mg	50 mg	1/1/2000	N/A	amphotericin B for injection	Amphotericin B for injection is specifically intended to treat potentially life-threatening fungal infections: aspergillosis, cryptococcosis (torulosis), North American blastomycosis, systemic candidiasis, coccidioidomycosis, histoplasmosis, zygomycosis including mucormycosis due to susceptible species of the genera absidia, mucor and rhizopus, and infections due to related susceptible species of conidiobolus and basidiobolus, and sporotrichosis. May be useful to treat American mucocutaneous leishmaniasis, but it is not the drug of choice as primary therapy.	93	N/A	N/A	N/A	Y	Y		9/25/2018
Drugs	J0287	Injection, amphotericin B lipid complex, 10 mg	10 mg	1/1/2003	Abelcet®	amphotericin B lipid complex injection	Indicated for the treatment of invasive fungal infections in patients who are refractory to or intolerant of conventional amphotericin B therapy.	2,170	N/A	N/A	N/A	Y	Y		5/6/2019
Drugs	J0289	Injection, amphotericin B liposome, 10 mg	10 mg	1/1/2003	AmBisome®	amphotericin B liposome for injection	Indicated for: • Empirical therapy for presumed fungal infection in febrile, neutropenic patients • Treatment of patients with Aspergillus species, Candida species, and/or Cryptococcus species infections refractory to amphotericin B desoxycholate, or in patients where renal impairment or unacceptable toxicity precludes the use of amphotericin B desoxycholate • Treatment of Cryptococcal Meningitis in HIV-infected patients • Treatment of visceral leishmaniasis. In immunocompromised patients with visceral leishmaniasis treated with AmBisome, relapse rates were high following initial clearance of parasites.	2,604	1 month	N/A	N/A	Y	Y		4/10/2019
Drugs	J0290	Injection, ampicillin sodium, 500 mg	500 mg	1/1/2000	N/A	ampicillin sodium for injection, for intravenous or intramuscular use	Indicated in the treatment of infections caused by susceptible strains of the designated organisms in the following conditions: • Respiratory Tract Infections caused by Streptococcus pneumoniae, Staphylococcus aureus (penicillinase and nonpenicillinase-producing), H. influenzae, and Group A beta-hemolytic streptococci. • Bacterial Meningitis caused by E. coli, Group B streptococci, and other Gram-negative bacteria (Listeria monocytogenes, N. meningitidis). The addition of an aminoglycoside with ampicillin may increase its effectiveness against Gram-negative bacteria. • Septicemia and Endocarditis caused by susceptible Gram-positive organisms including Streptococcus spp., penicillin G-susceptible staphylococci, and enterococci. Gram-negative sepsis caused by E. coli, Proteus mirabilis and Salmonella spp. responds to ampicillin. Endocarditis due to enterococcal strains usually respond to intravenous therapy. The addition of an aminoglycoside may enhance the effectiveness of ampicillin when treating streptococcal endocarditis. • Urinary Tract Infections caused by sensitive strains of E. coli and Proteus mirabilis. • Gastrointestinal Infections caused by Salmonella typhi (typhoid fever), other Salmonella spp., and Shigella spp. (dysentery) usually respond to oral or intravenous therapy.	1,736	N/A	N/A	N/A	Y	Y		4/10/2019
Drugs	J0291	Injection, plazomicin, 5 mg	5 mg	10/1/2019	Zemdri™	plazomicin injection, for intravenous use	• Indicated for the treatment of patients 18 years of age or older with complicated urinary tract infections (cUTI) including pyelonephritis. • As only limited clinical safety and efficacy data are available, reserve Zemdri for use in patients who have limited or no alternative treatment options. • To reduce the development of drug-resistant bacteria and maintain effectiveness of Zemdri and other antibacterial drugs, Zemdri should be used only to treat infections that are proven or strongly suspected to be caused by susceptible microorganisms.	2,940	18 years	N/A	N/A	Y	Y		10/3/2019
Drugs	J0295	Injection, ampicillin sodium/sulbactam sodium, per 1.5 gm	per 1.5 gm	1/1/2000	Unasyn®	ampicillin sodium and sulbactam sodium injection, powder, for solution	Indicated for the treatment of infection due to susceptible strains of the designated microorganisms in the conditions listed below: • Skin and skin structure infections caused by beta-lactamase producing strains of Staphylococcus aureus, Escherichia coli, Klebsiella spp. (including K. pneumoniae), Proteus mirabilis, Bacteroides fragilis, Enterobacter spp., and Acinetobacter calcoaceticus. • Intra-abdominal infections: caused by beta-lactamase producing strains of Escherichia coli, Klebsiella spp. (including K. pneumoniae), Bacteroides spp. (including B. fragilis), and Enterobacter spp. • Gynecological Infections caused by beta-lactamase producing strains of Escherichia coli, and Bacteroides spp. (including B. fragilis). • While Unasyn is indicated only for the conditions listed above, infections caused by ampicillin-susceptible organisms are also amenable to treatment with Unasyn due to its ampicillin content. Therefore, mixed infections caused by ampicillin-susceptible organisms and beta-lactamase producing organisms susceptible to Unasyn should not require the addition of another antibacterial. • Appropriate culture and susceptibility tests should be performed before treatment in order to isolate and identify the organisms causing infection and to determine their susceptibility to Unasyn.	168	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific: • Skin and skin structure infections: 1 year of age and older • Intra-abdominal infections: 18 years of age and older	6/7/2019
Drugs	J0300	Injection, amobarbital, up to 125mg	up to 125 mg	1/1/2000	Amytal®	amobarbital sodium for injection	Indicated for use as a: • Sedative • Hypnotic, for the short-term treatment of insomnia, since it appears to lose its effectiveness for sleep induction and sleep maintenance after 2 weeks • Preanesthetic	112	6 years	N/A	N/A	Y	Y		4/10/2019

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Category	HCPCS Code	HCPCS Description	HCPCS Code Billing Unit	HCPCS Effective Date	Brand Name	Generic Name	FDA Approved Indications (See Package Insert for full FDA approved indication descriptions)	NC Suggested Max Monthly Units	Minimum Age	Maximum Age	Gender Restrictions	NDC Required	Rebating Labeler Required	Comments	Last Modified Date
Drugs	J0330	Injection, succinylcholine chloride, up to 20mg	up to 20 mg	1/1/2000	Anectine®, Quelicin™	succinylcholine chloride injection	Indicated as an adjunct to general anesthesia, to facilitate tracheal intubation, and to provide skeletal muscle relaxation during surgery or mechanical ventilation.	8	N/A	N/A	N/A	Y	Y		9/21/2018
Drugs	J0349	Injection, rezafungin, 1 mg	1 mg	10/1/2023	Rezzayo™	rezafungin for injection, for intravenous use	Indicated in patients 18 years of age or older who have limited or no alternative options for the treatment of candidemia and invasive candidiasis. Limitations of Use: Rezzayo has not been studied in patients with endocarditis, osteomyelitis, and meningitis due to *Candida.*	1,000	18 years	N/A	N/A	Y	Y		9/28/2023
Drugs	J0360	Injection, hydralazine HCl, up to 20mg	up to 20 mg	1/1/2000	N/A	hydralazine hydrochloride injection	Indicated for severe essential hypertension when the drug cannot be given orally or when there is an urgent need to lower blood pressure.	75	N/A	N/A	N/A	Y	Y		6/4/2019
Drugs	J0401	Injection, aripiprazole (abilify maintena), 1 mg	1 mg	1/1/2014	Abilify Maintena®	aripiprazole extended-release injectable suspension, for intramuscular use	Indicated for the treatment of schizophrenia in adults. Indicated for maintenance monotherapy treatment of bipolar I disorder in adults.	800	18 years	N/A	N/A	Y	Y		6/24/2024
Drugs	J0402	Injection, aripiprazole (abilify asimtufii), 1 mg	1 mg	1/1/2024	Abilify Asimtufii®	aripiprazole extended-release injectable suspension, for intramuscular use	Indicated: • for the treatment of schizophrenia in adults • as maintenance monotherapy treatment of bipolar I disorder in adults	960	18 years	N/A	N/A	Y	Y		12/21/2023
Drugs	J0456	Injection, azithromycin, 500 mg	500 mg	1/1/2000	Zithromax®	azithromycin for intravenous infusion	Indicated for mild to moderate infections caused by designated, susceptible bacteria in community-acquired pneumonia in adults and pelvic inflammatory disease.	10	16 years	N/A	N/A	Y	Y		9/25/2018
Drugs	J0461	Injection, atropine sulfate, 0.01 mg	0.01 mg	1/1/2010	N/A	atropine sulfate injection for intravenous, intramuscular, subcutaneous, intraosseous, or endotracheal use	Indicated for temporary blockade of severe or life threatening muscarinic effects.	27,900	N/A	N/A	N/A	Y	Y		10/4/2018
Drugs	J0470	Injection, dimercaprol, per 100mg	per 100 mg	1/1/2000	BAL in oil™	dimercaprol injection	Indicated in the treatment of: • Arsenic, gold and mercury poisoning. • Acute lead poisoning when used concomitantly with Edetate Calcium Disodium Injection. Dimercaprol is effective for use in acute poisoning by mercury salts if therapy is begun within one or two hours following ingestion. It is not very effective for chronic mercury poisoning. Dimercaprol is of questionable value in poisoning by other heavy metals such as antimony and bismuth. It should not be used in iron, cadmium, or selenium poisoning because the resulting dimercaprol-metal complexes are more toxic than the metal alone, especially to the kidneys.	252	N/A	N/A	N/A	Y	Y		6/7/2019
Drugs	J0475	Injection, baclofen, 10 mg	10 mg	1/1/2000	Gablofen®, Lioresal® Intrathecal	baclofen injection	Indicated for use in the management of severe spasticity of cerebral or spinal origin in adult and pediatric patients age 4 years and above. • Baclofen intrathecal should be reserved for patients unresponsive to oral baclofen therapy, or those who experience intolerable central nervous system side effects at effective doses. • Patients should first respond to a screening dose of intrathecal baclofen prior to consideration for long term infusion via an implantable pump. • Spasticity due to traumatic brain injury: wait at least one year after injury before considering baclofen intrathecal therapy.	8	4 years	N/A	N/A	Y	Y	5/2023: NC Suggested Max Monthly Units updated to align with NCTracks, which has been set to 8 units/month since 9/1/2018.	9/13/2023
Drugs	J0476	Injection, baclofen, 50 mcg, for intrathecal trial	50 mcg	1/1/2000	Gablofen®, Lioresal® Intrathecal	baclofen injection, for intrathecal trial	Management of severe spasticity caused by spinal cord lesions or multiple sclerosis. Baclofen also is used intrathecally in patients with spasticity of cerebral origin, including those with cerebral palsy and acquired brain injury. Baclofen injection is designated an orphan drug by the FDA for the management of spasticity in patients with cerebral palsy.	5	N/A	N/A	N/A	Y	Y		5/21/2019
Biologicals	J0485	Injection, belatacept, 1 mg	1 mg	1/1/2013	Nulojix®	belatacept for injection, for intravenous use	Prophylaxis of organ rejection in adult patients receiving a kidney transplant. Use in combination with basiliximab induction, mycophenolate mofetil, and corticosteroids. Limitations of Use: • Use only in patients who are EBV seropositive. • Use has not been established for the prophylaxis of organ rejection in transplanted organs other than the kidney.	6,000	18 years	N/A	N/A	Y	Y		6/6/2019
Biologicals	J0490	Injection, belimumab, 10 mg	10 mg	1/1/2012	Benlysta®	belimumab injection, for intravenous use	Indicated for the treatment of patients aged 5 years and older with active, autoantibody-positive, systemic lupus erythematosus who are receiving standard therapy. Indicated for the treatment of patients aged 5 years and older with active lupus nephritis who are receiving standard therapy. Limitations of Use: The efficacy of Benlysta has not been evaluated in patients with severe active central nervous system lupus. Use of Benlysta is not recommended in this situation.	420	5 years	N/A	N/A	Y	Y		8/16/2022
Biologicals	J0491	Injection, anifrolumab-fnia, 1 mg	1 mg	4/1/2022	Saphnelo™	anifrolumab-fnia injection, for intravenous use	Indicated for the treatment of adult patients with moderate to severe systemic lupus erythematosus (SLE), who are receiving standard therapy. Limitations of Use: The efficacy of Saphnelo has not been evaluated in patients with severe active lupus nephritis or severe active central nervous system lupus. Use of Saphnelo is not recommended in these situations.	600	18 years	N/A	N/A	Y	Y		3/21/2022
Drugs	J0500	Injection, dicyclomine HCl, up to 20mg	up to 20 mg	1/1/2000	Bentyl®	dicyclomine hydrochloride injection for intramuscular use	Indicated for the treatment of functional bowel/irritable bowel syndrome.	8	18 years	N/A	N/A	Y	Y		4/10/2019
Drugs	J0515	Injection, benztropine mesylate, per 1 mg	1 mg	1/1/2000	Cogentin®	benztropine mesylate injection	Indicated: - for use as an adjunct in the therapy of all forms of parkinsonism. - for use in the control of extrapyramidal disorders (except tardive dyskinesia) due to neuroleptic drugs (e.g., phenothiazines).	248	3 years	N/A	N/A	Y	Y		11/17/2021

Category	HCPCS Code	HCPCS Description	HCPCS Code Billing Unit	HCPCS Effective Date	Brand Name	Generic Name	FDA Approved Indications (See Package Insert for full FDA approved indication descriptions)	NC Suggested Max Monthly Units	Minimum Age	Maximum Age	Gender Restrictions	NDC Required	Rebating Labeler Required	Comments	Last Modified Date
Drugs	J0558	Injection, penicillin G benzathine and penicillin G procaine, 100,000 units	100,000 units	1/1/2011	Bicillin® C-R	penicillin G benzathine and penicillin G procaine injectable suspension	Indicated for the treatment of moderately severe infections due to penicillin G–susceptible microorganisms that are susceptible to serum levels common to this particular dosage form. Therapy should be guided by bacteriological studies (including susceptibility testing) and by clinical response. Bicillin C-R is indicated in the treatment of the following in adults and pediatric patients: • Moderately severe to severe infections of the upper-respiratory tract, scarlet fever, erysipelas, and skin and soft-tissue infections due to susceptible streptococci. NOTE: Streptococci in Groups A, C, G, H, L, and M are very sensitive to penicillin G. Other groups, including Group D (enterococci), are resistant. Penicillin G sodium or potassium is recommended for streptococcal infections with bacteremia. • Moderately severe pneumonia and otitis media due to susceptible Streptococcus pneumoniae. NOTE: Severe pneumonia, empyema, bacteremia, pericarditis, meningitis, peritonitis, and arthritis of pneumococcal etiology are better treated with penicillin G sodium or potassium during the acute stage. • When high, sustained serum levels are required, penicillin G sodium or potassium, either IM or IV, should be used. This drug should not be used in the treatment of venereal diseases, including syphilis, gonorrhea, yaws, bejel, and pinta.	96	N/A	N/A	N/A	Y	Y		8/24/2018
Drugs	J0561	Injection, penicillin G benzathine, 100,000 units	100,000 units	1/1/2011	Bicillin® L-A	penicillin G benzathine injectable suspension	Indicated for the treatment of infections due to penicillin G-sensitive microorganisms that are susceptible to the low and very prolonged serum levels common to this particular dosage form. Therapy should be guided by bacteriological studies (including sensitivity tests) and by clinical response. The following infections will usually respond to adequate dosage of intramuscular penicillin G benzathine: mild to moderate upper respiratory infections due to susceptible streptococci, venereal infections (syphilis, yaws, bejel, and pinta) and prophylaxis of rheumatic fever and chorea.	96	N/A	N/A	N/A	Y	Y		8/24/2018
Biologicals	J0565	Injection, bezlotoxumab, 10 mg	10 mg	1/1/2018	Zinplava™	bezlotoxumab injection, for intravenous use	Indicated to reduce recurrence of *Clostridioides difficile* infection (CDI) in adult and pediatric patients 1 year of age or older who are receiving antibacterial drug treatment for CDI and are high risk for CDI recurrence. Limitation of use: Zinplava is not indicated for the treatment of CDI. Zinplava is not an antibacterial drug. Zinplava should only be used in conjunction with antibacterial drug treatment of CDI.	140	1 year	N/A	N/A	Y	Y		6/19/2023
Biologicals	J0567	Injection, cerliponase alfa, 1 mg	1 mg	1/1/2019	Brineura®	cerliponase alfa injection, for intraventricular use	Indicated to slow the loss of ambulation in symptomatic pediatric patients 3 years of age and older with late infantile neuronal ceroid lipofuscinosis type 2 (CLN2), also known as tripeptidyl peptidase 1 (TPP1) deficiency.	900	3 years	N/A	N/A	Y	Y		7/2/2018
Drugs	J0577	Injection, buprenorphine extended-release (brixadi), less than or equal to 7 days of therapy	1 syringe	4/1/2024	Brixadi™	buprenorphine extended-release injection for subcutaneous use CIII (weekly)	Indicated for the treatment of moderate to severe opioid use disorder in patients who have initiated treatment with a single dose of a transmucosal buprenorphine product or who are already being treated with buprenorphine. Brixadi should be used as part of a complete treatment plan that includes counseling and psychosocial support.	5	18 years	N/A	N/A	Y	Y		3/22/2024
Drugs	J0578	Injection, buprenorphine extended-release (brixadi), greater than 7 days and up to 28 days of therapy	1 syringe	4/1/2024	Brixadi™	buprenorphine extended-release injection for subcutaneous use CIII (monthly)	Indicated for the treatment of moderate to severe opioid use disorder in patients who have initiated treatment with a single dose of a transmucosal buprenorphine product or who are already being treated with buprenorphine. Brixadi should be used as part of a complete treatment plan that includes counseling and psychosocial support.	2	18 years	N/A	N/A	Y	Y		3/22/2024
Biologicals	J0584	Injection, burosumab-twza 1 mg	1 mg	1/1/2019	Crysvita®	burosumab-twza injection, for subcutaneous use	Indicated for: • The treatment of X-linked hypophosphatemia (XLH) in adult and pediatric patients 6 months of age and older. • The treatment of FGF23-related hypophosphatemia in tumor-induced osteomalacia (TIO) associated with phosphaturic mesenchymal tumors that cannot be curatively resected or localized in adult and pediatric patients 2 years of age and older.	540	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • XLH: 6 months of age and older • TIO: 2 years of age and older	7/28/2020
Biologicals	J0585	Injection, onabotulinumtoxinA, 1 unit	1 unit	1/1/2000	Botox®	onabotulinumtoxinA for injection, for intramuscular, intradetrusor, or intradermal use	Indicated for: • Treatment of overactive bladder (OAB) with symptoms of urge urinary incontinence, urgency, and frequency, in adults who have an inadequate response to or are intolerant of an anticholinergic medication • Treatment of urinary incontinence due to detrusor overactivity associated with a neurologic condition [e.g., spinal cord injury (SCI), multiple sclerosis (MS)] in adults who have an inadequate response to or are intolerant of an anticholinergic medication • Treatment of neurogenic detrusor overactivity (NDO) in pediatric patients 5 years of age and older who have an inadequate response to or are intolerant of anticholinergic medication. • Prophylaxis of headaches in adult patients with chronic migraine (≥15 days per month with headache lasting 4 hours a day or longer) • Treatment of spasticity in patients 2 years of age and older. • Treatment of cervical dystonia in adult patients, to reduce the severity of abnormal head position and neck pain • Treatment of severe axillary hyperhidrosis that is inadequately managed by topical agents in adult patients • Treatment of blepharospasm associated with dystonia in patients 12 years of age and older • Treatment of strabismus in patients 12 years of age and older Important Limitations: Safety and effectiveness of Botox have not been established for: • Prophylaxis of episodic migraine (14 headache days or fewer per month) • Treatment of hyperhidrosis in body areas other than axillary	600 in 90 day interval	N/A	N/A	N/A	Y	Y	1/2023: NC Suggested Max Monthly Units updated to align with NCTracks, which has been set to 600 units in 90 days since 1/1/2019. 9/2023: NC Suggested Max Monthly Units updated from 3 month interval to 90 day interval to align with NCTracks. 11/2023: Edited 1/2023 and 9/2023 comments for clarity.	11/3/2023

- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Biologicals	J0638	Injection, canakinumab, 1 mg	1 mg	1/1/2011	Ilaris®	canakinumab injection, for subcutaneous use	Indicated for the treatment of: - Periodic Fever Syndromes: • Cryopyrin-Associated Periodic Syndromes (CAPS), in adults and children 4 years of age and older including: Familial Cold Autoinflammatory Syndrome (FCAS) and Muckle-Wells Syndrome (MWS). • Tumor Necrosis Factor Receptor Associated Periodic Syndrome (TRAPS) in adult and pediatric patients. • Hyperimmunoglobulin D Syndrome (HIDS)/Mevalonate Kinase Deficiency (MKD) in adult and pediatric patients. • Familial Mediterranean Fever (FMF) in adult and pediatric patients. - Active Still's Disease: • Active Systemic Juvenile Idiopathic Arthritis (SJIA) in patients aged 2 years and older. • Adult-Onset Still's Disease (AOSD) - Gout flares in adults in whom non-steroidal anti-inflammatory drugs (NSAIDs) and colchicine are contraindicated, are not tolerated, or do not provide an adequate response, and in whom repeated courses of corticosteroids are not appropriate.	600	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • SJIA, AOSD, TRAPS, HIDS/MKD, and FMF: 2 years of age and older • CAPS (FCAS and MWS): 4 years of age and older • Gout flares: 18 years of age and older	9/28/2023
Drugs	J0640	Injection, leucovorin calcium, per 50 mg	50 mg	1/1/2000	N/A	leucovorin calcium for injection for intravenous or intramuscular use	Indicated: • After high dose methotrexate therapy in osteosarcoma. • To diminish the toxicity and counteract the effects of impaired methotrexate elimination and of inadvertent overdosages of folic acid antagonists. • In the treatment of megaloblastic anemias due to folic acid deficiency when oral therapy is not feasible. • For use in combination with 5-fluorouracil to prolong survival in the palliative treatment of patients with advanced colorectal cancer. Leucovorin should not be mixed in the same infusion as 5-fluorouracil because a precipitate may form.	80	N/A	N/A	N/A	Y	Y		7/2/2018
Drugs	J0641	Injection, levoleucovorin, not otherwise specified, 0.5 mg	0.5 mg	1/1/2009	Fusilev®	levoleucovorin injection solution for intravenous use	Indicated for: • Rescue after high-dose methotrexate therapy in osteosarcoma. • Diminishing the toxicity and counteracting the effects of impaired methotrexate elimination and of inadvertent overdosage of folic acid antagonists. • Use in combination chemotherapy with 5-fluorouracil in the palliative treatment of patients with advanced metastatic colorectal cancer. Limitations of Use: Fusilev is not approved for pernicious anemia and megaloblastic anemias. Improper use may cause a hematologic remission while neurologic manifestations continue to progress.	10,000	N/A	N/A	N/A	Y	Y		10/3/2019
Drugs	J0642	Injection, levoleucovorin (khapzory), 0.5 mg	0.5 mg	10/1/2019	Khapzory™	levoleucovorin for injection, for intravenous use	Indicated for: • Rescue after high-dose methotrexate therapy in patients with osteosarcoma. • Diminishing the toxicity associated with overdosage of folic acid antagonists or impaired methotrexate elimination. • Treatment of patients with metastatic colorectal cancer in combination with fluorouracil. Limitations of Use: Khapzory is not indicated for the treatment of pernicious anemia and megaloblastic anemia secondary to lack of vitamin B12 because of the risk of progression of neurologic manifestations despite hematologic remission.	4,800	N/A	N/A	N/A	Y	Y		10/3/2019
Drugs	J0665	Injection, bupivacaine, not otherwise specified, 0.5 mg	0.5 mg	7/1/2023	Marcaine™, Sensorcaine®	bupivacaine hydrochloride injection, for infiltration, perineural, caudal, epidural, or retrobulbar use and bupivacaine hydrochloride in dextrose injection for subarachnoid injection	Bupivacaine hydrochloride injection: • Indicated in adults for the production of local or regional anesthesia or analgesia for surgery, dental and oral surgery procedures, diagnostic and therapeutic procedures, and for obstetrical procedures. For each type of block indicated to produce local or regional anesthesia or analgesia, specific concentrations and presentations are recommended. • Limitations of Use: Not all blocks are indicated for use with bupivacaine given clinically significant risks associated with use. Bupivacaine hydrochloride in dextrose injection: • Indicated in adults for subarachnoid injection for the production of subarachnoid block (spinal anesthesia).	4,000	Formulation-specific age restrictions (see comments)	N/A	N/A	Y	Y	Formulation-specific age restrictions: • Bupivacaine hydrochloride injection: 12 years of age and older • Bupivacaine hydrochloride in dextrose injection: 18 years of age and older	10/26/2023
Drugs	J0670	Injection, mepivacaine hydrochloride, per 10 mL	10 mL	1/1/2000	Carbocaine™, Polocaine®, Polocaine® MPF	mepivacaine hydrochloride injection	Carbocaine, Polocaine and Polocaine MPF: Indicated for production of local or regional analgesia and anesthesia by local infiltration, peripheral nerve block techniques, and central neural techniques including epidural and caudal blocks.	50	N/A	N/A	N/A	Y	Y		4/10/2019
Drugs	J0687	Injection, cefazolin sodium (wg critical care), not therapeutically equivalent to j0690, 500 mg	500 mg	7/1/2024	N/A	cefazolin for injection, for intravenous use (WG Critical Care)	Cefazolin for injection is indicated for perioperative prophylaxis in adult patients. To reduce the development of drug-resistant bacteria and maintain the effectiveness of Cefazolin for Injection and other antibacterial drugs, Cefazolin for Injection should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	496	18 years	N/A	N/A	Y	Y		6/24/2024

Drugs	J0688	Injection, cefazolin sodium (hikma), not therapeutically equivalent to j0690, 500 mg	500 mg	1/1/2024	N/A	cefazolin for injection, for intravenous use (Hikma)	Cefazolin for injection is a cephalosporin antibacterial indicated for: • Treatment of the following infections caused by susceptible isolates of the designated microorganisms in adult and pediatric patients 1 month of age and older for whom appropriate dosing with this formulation can be achieved: o Respiratory tract infections o Urinary tract infections o Skin and skin structure infections o Biliary tract infections o Bone and joint infections o Genital infections o Septicemia o Endocarditis • Perioperative prophylaxis in adult patients To reduce the development of drug-resistant bacteria and maintain the effectiveness of cefazolin for injection and other antibacterial drugs, cefazolin for injection should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	496	1 month	N/A	N/A	Y	Y		6/25/2024
Drugs	J0689	Injection, cefazolin sodium (baxter), not therapeutically equivalent to j0690, 500 mg	500 mg	1/1/2023	N/A	cefazolin in dextrose injection, for intravenous use (Baxter)	Indicated for: • Treatment of the following infections caused by susceptible isolates of the designated microorganisms in adult and pediatric patients for whom appropriate dosing with this formulation can be achieved: o Respiratory tract infections o Urinary tract infections o Skin and skin structure infections o Biliary tract infections o Bone and joint infections o Genital infections o Septicemia o Endocarditis • Perioperative prophylaxis in adults and pediatric patients aged 10 to 17 years old for whom appropriate dosing with this formulation can be achieved. To reduce the development of drug-resistant bacteria and maintain the effectiveness of cefazolin injection and other antibacterial drugs, cefazolin injection should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	496	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • Treatment of infections caused by susceptible isolates of the designated microorganisms: 1 month and older • Perioperative prophylaxis: 10 years of age and older	6/25/2024
Drugs	J0690	Injection, cefazolin sodium, 500 mg	500 mg	1/1/2000	N/A	cefazolin sodium for injection	Indicated for the treatment of the following serious infections when due to susceptible organisms: • Respiratory Tract Infections: Due to S. pneumoniae, Klebsiella species, H. influenzae, S. aureus (penicillin-sensitive and penicillin-resistant), and group A beta-hemolytic streptococci. Injectable benzathine penicillin is considered the drug of choice in treatment and prevention of streptococcal infections, including the prophylaxis of rheumatic fever. Cefazolin is effective in the eradication of streptococci from the nasopharynx; however, data establishing the efficacy of cefazolin in the subsequent prevention of rheumatic fever are not available at present. • Urinary Tract Infections: Due to E. coli, P. mirabilis, Klebsiella species, and some strains of enterobacter and enterococci. • Skin and Skin Structure Infections: Due to S. aureus (penicillin-sensitive and penicillin-resistant), group A beta-hemolytic streptococci, and other strains of streptococci. • Biliary Tract Infections: Due to E. coli, various strains of streptococci, P. mirabilis, Klebsiella species, and S. aureus. • Bone and Joint Infections: Due to S. aureus. • Genital Infections: (i.e., prostatitis, epididymitis) due to E. coli, P. mirabilis, Klebsiella species, and some strains of enterococci. • Septicemia: Due to S. pneumoniae, S. aureus (penicillin-sensitive and penicillin-resistant), P. mirabilis, E. coli, and Klebsiella species. • Endocarditis: Due to S. aureus (penicillin-sensitive and penicillin-resistant) and group A betahemolytic streptococci. Perioperative Prophylaxis: The prophylactic administration of cefazolin preoperatively, intraoperatively, and postoperatively may reduce the incidence of certain postoperative infections in patients undergoing surgical procedures which are classified as contaminated or potentially contaminated (e.g., vaginal hysterectomy, and cholecystectomy in high-risk patients such as those older than 70 years, with acute cholecystitis, obstructive jaundice, or common duct bile stones). The perioperative use of cefazolin may also be effective in surgical patients in whom infection at the operative site would present a serious risk (e.g., during open heart surgery and prosthetic arthroplasty).	496	1 month	N/A	N/A	Y	Y		6/25/2024
Drugs	J0691	Injection, lefamulin, 1 mg	1 mg	7/1/2020	Xenleta™	lefamulin injection, for intravenous use	Indicated for the treatment of adults with community-acquired bacterial pneumonia (CABP) caused by the following susceptible microorganisms: Streptococcus pneumoniae, Staphylococcus aureus (methicillin-susceptible isolates), Haemophilus influenzae, Legionella pneumophila, Mycoplasma pneumoniae, and Chlamydophila pneumoniae. To reduce the development of drug resistant bacteria and maintain the effectiveness of Xenleta and other antibacterial drugs, Xenleta should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	2,100	18 years	N/A	N/A	Y	Y		6/17/2020
Drugs	J0692	Injection, cefepime HCl, 500 mg	500 mg	1/1/2002	Maxipime™	cefepime hydrochloride injection for intravenous or intramuscular use	Indicated for the treatment of the following infections caused by susceptible strains of the designated microorganisms: • Moderate to severe pneumonia • Empiric therapy for febrile neutropenic patients • Uncomplicated and complicated urinary tract infections (including pyelonephritis) • Uncomplicated skin and skin structure infections • Complicated intra-abdominal infections (used in combination with metronidazole) in adults	120	2 months	N/A	N/A	Y	Y		8/5/2021

Drugs	J0694	Injection, cefoxitin sodium, 1 gram	1 g	1/1/2000	N/A	cefoxitin for injection	Indicated for the treatment of serious infections caused by susceptible strains of the designated microorganisms in the diseases listed below. • Lower respiratory tract infections: including pneumonia and lung abscess, caused by Streptococcus pneumoniae, other streptococci (excluding enterococci, e.g., Enterococcus faecalis [formerly Streptococcus faecalis]), Staphylococcus aureus (including penicillinase-producing strains), Escherichia coli, Klebsiella species, Haemophilus influenzae, and Bacteroides species. • Urinary tract infections caused by Escherichia coli, Klebsiella species, Proteus mirabilis, Morganella morganii, Proteus vulgaris and Providencia species (including P. rettgeri). • Intra-abdominal infections, including peritonitis and intra-abdominal abscess, caused by Escherichia coli, Klebsiella species, Bacteroides species including Bacteroides fragilis, and Clostridium species. • Gynecological infections: including endometritis, pelvic cellulitis, and pelvic inflammatory disease caused by Escherichia coli, Neisseria gonorrhoeae (including penicillinase-producing strains), Bacteroides species including B. fragilis, Clostridium species, Peptococcus niger, Peptostreptococcus species, and Streptococcus agalactiae. Cefoxitin, like cephalosporins, has no activity against Chlamydia trachomatis. Therefore, when cefoxitin is used in the treatment of patients with pelvic inflammatory disease and C. trachomatis is one of the suspected pathogens, appropriate anti-chlamydial coverage should be added. • Septicemia: caused by Streptococcus pneumoniae, Staphylococcus aureus (including penicillinase producing strains), Escherichia coli, Klebsiella species, and Bacteroides species including B. fragilis. • Bone and joint infections: caused by Staphylococcus aureus (including penicillinase-producing strains). • Skin and skin structure infections: caused by Staphylococcus aureus (including penicillinase producing strains), Staphylococcus epidermidis, Streptococcus pyogenes and other streptococci (excluding enterococci e.g., Enterococcus faecalis [formerly Streptococcus faecalis]), Escherichia coli, Proteus mirabilis, Klebsiella species, Bacteroides species including B. fragilis, Clostridium species, Peptococcus niger, and Peptostreptococcus species. Indicated for the prophylaxis of infection in patients undergoing uncontaminated gastrointestinal surgery, vaginal hysterectomy, abdominal hysterectomy, or cesarean section	372	3 months	N/A	N/A	Y	Y		9/27/2018
Drugs	J0695	Injection, ceftolozane 50 mg and tazobactam 25 mg	75 mg	1/1/2016	Zerbaxa®	ceftolozane and tazobactam for injection, for intravenous use	Indicated in patients 18 years or older for the treatment of the following infections caused by designated susceptible microorganisms: • Complicated intra-abdominal infections (cIAI), used in combination with metronidazole. • Complicated urinary tract infections (cUTI), including pyelonephritis. • Hospital-acquired Bacterial Pneumonia and Ventilator-associated Bacterial Pneumonia (HABP/VABP) Indicated in pediatric patients (birth to less than 18 years old) for the treatment of the following infections caused by designated susceptible microorganisms: • Complicated Intra-abdominal Infections (cIAI), used in combination with metronidazole • Complicated Urinary Tract Infections (cUTI), including pyelonephritis To reduce the development of drug-resistant bacteria and maintain the effectiveness of Zerbaxa and other antibacterial drugs, Zerbaxa should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	1,680	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	cIAI and cUTI: N/A HABP/VABP: 18 years of age and older	5/9/2022
Drugs	J0696	Injection, ceftriaxone sodium, per 250 mg	250 mg	1/1/2000	Rocephin®	ceftriaxone sodium injection	Indicated for the treatment of the following infections when caused by susceptible organisms: • Lower Respiratory Tract Infections: Caused by Streptococcus pneumoniae, Staphylococcus aureus, Haemophilus influenzae, Haemophilus parainfluenzae, Klebsiella pneumoniae, Escherichia coli, Enterobacter aerogenes, Proteus mirabilis or Serratia marcescens. • Acute Bacterial Otitis Media: Caused by Streptococcus pneumoniae, Haemophilus influenzae (including beta-lactamase producing strains) or Moraxella catarrhalis (including beta-lactamase producing strains). • Skin and Skin Structure Infections: Caused by Staphylococcus aureus, Staphylococcus epidermidis, Streptococcus pyogenes, Viridans group streptococci, Escherichia coli, Enterobacter cloacae, Klebsiella oxytoca, Klebsiella pneumoniae, Proteus mirabilis, Morganella morganii , Pseudomonas aeruginosa, Serratia marcescens, Acinetobacter calcoaceticus, Bacteroides fragilis or Peptostreptococcus species. • Urinary Tract Infections: Caused by Escherichia coli, Proteus mirabilis, Proteus vulgaris, Morganella morganii or Klebsiella pneumoniae. • Uncomplicated Gonorrhea (cervical/urethral and rectal): Caused by Neisseria gonorrhoeae, including both penicillinase- and nonpenicillinase-producing strains, and pharyngeal gonorrhea caused by nonpenicillinase-producing strains of Neisseria gonorrhoeae. • Pelvic Inflammatory Disease: Caused by Neisseria gonorrhoeae. Ceftriaxone sodium, like other cephalosporins, has no activity against Chlamydia trachomatis. Therefore, when cephalosporins are used in the treatment of patients with pelvic inflammatory disease and Chlamydia trachomatis is one of the suspected pathogens, appropriate antichlamydial coverage should be added. • Bacterial Septicemia: Caused by Staphylococcus aureus, Streptococcus pneumoniae, Escherichia coli, Haemophilus influenzae or Klebsiella pneumoniae. • Bone and Joint Infections: Caused by Staphylococcus aureus, Streptococcus pneumoniae, Escherichia coli, Proteus mirabilis, Klebsiella pneumoniae or Enterobacter species. • Intra-abdominal Infections: Caused by Escherichia coli, Klebsiella pneumoniae, Bacteroides fragilis, Clostridium species (Note: most strains of Clostridium difficile are resistant) or Peptostreptococcus species. • Meningitis: Caused by Haemophilus influenzae, Neisseria meningitidis or Streptococcus pneumoniae. Ceftriaxone has also been used successfully in a limited number of cases of meningitis and shunt infection	496	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	See package insert for specific neonate contraindication.	10/4/2018

Drugs	J0702	Injection, betamethasone acetate 3 mg and betamethasone sodium phosphate 3 mg	1 mL	1/1/2000	Celestone® Soluspan®	betamethasone sodium phosphate and betamethasone acetate injectable suspension	When oral therapy is not feasible, the intramuscular use of Celestone Soluspan is indicated as follows: • Allergic States: Control of severe or incapacitating allergic conditions intractable to adequate trials of conventional treatment in asthma, atopic dermatitis, contact dermatitis, drug hypersensitivity reactions, perennial or seasonal allergic rhinitis, serum sickness, transfusion reactions. • Dermatologic Diseases: Bullous dermatitis herpetiformis, exfoliative erythroderma, mycosis fungoides, pemphigus, severe erythema multiforme (Stevens-Johnson syndrome). • Endocrine Disorders: Congenital adrenal hyperplasia, hypercalcemia associated with cancer, nonsuppurative thyroiditis. Hydrocortisone or cortisone is the drug of choice in primary or secondary adrenocortical insufficiency. Synthetic analogs may be used in conjunction with mineralocorticoids where applicable; in infancy mineralocorticoid supplementation is of particular importance. • Gastrointestinal Diseases: To tide the patient over a critical period of the disease in regional enteritis and ulcerative colitis. • Hematologic Disorders: Acquired (autoimmune) hemolytic anemia, Diamond-Blackfan anemia, pure red cell aplasia, selected cases of secondary thrombocytopenia. • Miscellaneous: Trichinosis with neurologic or myocardial involvement, tuberculous meningitis with subarachnoid block or impending block when used with appropriate antituberculous chemotherapy. • Neoplastic Diseases: For palliative management of leukemias and lymphomas. • Nervous System: Acute exacerbations of multiple sclerosis; cerebral edema associated with primary or metastatic brain tumor or craniotomy. • Ophthalmic Diseases: Sympathetic ophthalmia, temporal arteritis, uveitis and ocular inflammatory conditions unresponsive to topical corticosteroids. • Renal Diseases: To induce diuresis or remission of proteinuria in idiopathic nephrotic syndrome or that due to lupus erythematosus. • Respiratory Diseases: Berylliosis, fulminating or disseminated pulmonary tuberculosis when used concurrently with appropriate antituberculous chemotherapy, idiopathic eosinophilic pneumonias, symptomatic sarcoidosis. • Rheumatic Disorders: As adjunctive therapy for short-term administration (to tide the patient over an acute episode or exacerbation) in acute gouty arthritis; acute rheumatic carditis; ankylosing spondylitis;	155	N/A	N/A	N/A	Y	Y		9/25/2018
Drugs	J0703	Injection, cefepime hydrochloride (b braun), not therapeutically equivalent to maxipime, 500 mg	500 mg	1/1/2023	N/A	cefepime for injection and dextrose injection for intravenous use (B. Braun)	Indicated in the treatment of the following infections caused by susceptible strains of the designated microorganisms: • Pneumonia • Empiric therapy for febrile neutropenic patients • Uncomplicated and complicated urinary tract infections • Uncomplicated skin and skin structure infections • Complicated intra-abdominal infections (used in combination with metronidazole) To reduce the development of drug-resistant bacteria and maintain the effectiveness of Cefepime for Injection and Dextrose Injection and other antibacterial drugs, Cefepime for Injection and Dextrose Injection should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	120	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication-specific age restrictions: • Complicated intra-abdominal infections: 17 years of age and older • All other indications: 2 months of age and older	12/12/2022
Drugs	J0712	Injection, ceftaroline fosamil, 10 mg	10 mg	1/1/2012	Teflaro®	ceftaroline fosamil for injection, for intravenous use	Indicated for the treatment of the following infection caused by designated susceptible bacteria: • Community-acquired bacterial pneumonia (CABP) in adult and pediatric patients 2 months of age and older • Acute bacterial skin and skin structure infections (ABSSSI) in adult and pediatric patients (at least 34 weeks gestational age and 12 days postnatal age)	1,680	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific: CABP: 2 months of age and older ABSSSI: 34 weeks gestational age and 12 days postnatal age and older	10/28/2019
Drugs	J0713	Injection, ceftazidime, per 500 mg	per 500 mg	1/1/2000	Tazicef®	ceftazidime for injection, for intravenous or intramuscular use	Indicated for the treatment of patients with infections caused by susceptible strains of the designated organisms in the following diseases: • Lower Respiratory Tract Infections: including pneumonia, caused by Pseudomonas aeruginosa and other Pseudomonas spp.; Haemophilus influenzae, including ampicillin-resistant strains; Klebsiella spp.; Enterobacter spp.; Proteus mirabilis; Escherichia coli; Serratia spp.; Citrobacter spp.; Streptococcus pneumoniae; and Staphylococcus aureus (methicillin-susceptible strains). • Skin and Skin-Structure Infections: caused by Pseudomonas aeruginosa; Klebsiella spp.; Escherichia coli; Proteus spp., including Proteus mirabilis and indole-positive Proteus; Enterobacter spp.; Serratia spp.; Staphylococcus aureus (methicillin-susceptible strains); and Streptococcus pyogenes (group A beta-hemolytic streptococci). • Urinary Tract Infections: both complicated and uncomplicated, caused by Pseudomonas aeruginosa; Enterobacter spp.; Proteus spp., including Proteus mirabilis and indole-positive Proteus; Klebsiella spp.; and Escherichia coli. • Bacterial Septicemia: caused by Pseudomonas aeruginosa, Klebsiella spp., Haemophilus influenzae, Escherichia coli, Serratia spp., Streptococcus pneumoniae, and Staphylococcus aureus (methicillinsusceptible strains). • Bone and Joint Infections: caused by Pseudomonas aeruginosa, Klebsiella spp., Enterobacter spp., and Staphylococcus aureus (methicillin-susceptible strains). • Gynecologic Infections: including endometritis, pelvic cellulitis, and other infections of the female genital tract caused by Escherichia coli. • Intra-abdominal Infections: including peritonitis caused by Escherichia coli, Klebsiella spp., and Staphylococcus aureus (methicillin-susceptible strains) and polymicrobial infections caused by aerobic and anaerobic organisms and Bacteroides spp. (many strains of Bacteroides fragilis are resistant). • Central Nervous System Infections: including meningitis, caused by Haemophilus influenzae and Neisseria meningitidis. Ceftazidime has also been used successfully in a limited number of cases of meningitis due to Pseudomonas aeruginosa and Streptococcus pneumoniae.	372	N/A	N/A	N/A	Y	Y		5/21/2019
Drugs	J0714	Injection, ceftazidime and avibactam, 0.5 g/0.125 g	0.625 g	1/1/2016	Avycaz®	ceftazidime and avibactam for injection, for intravenous use	Indicated for the treatment of the following infections caused by designated susceptible Gram-negative microorganisms in adult and pediatric patients (at least 31 weeks gestational age): • Complicated Intra-abdominal Infections (cIAI), used in combination with metronidazole • Complicated Urinary Tract Infections (cUTI), including Pyelonephritis • Hospital-acquired Bacterial Pneumonia and Ventilator-associated Bacterial Pneumonia (HABP/VABP)	168	31 weeks gestational age	N/A	N/A	Y	Y		2/27/2024

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Biologicals	J0716	Injection, centruroides immune f(ab)2, up to 120 milligrams	up to 120 mg (1 vial)	1/1/2013	Anascorp®	centruroides (scorpion) immune F(ab')² (equine) injection lyophilized for solution, for intravenous use only	Antivenom indicated for treatment of clinical signs of scorpion envenomation.	N/A	N/A	N/A	N/A	Y	Y		4/10/2019
Biologicals	J0717	Injection, certolizumab pegol, 1 mg	1 mg	1/1/2014	Cimzia®	certolizumab pegol for injection, for subcutaneous use	Indicated for: • Reducing signs and symptoms of Crohn's disease and maintaining clinical response in adult patients with moderately to severely active disease who have had an inadequate response to conventional therapy. • Treatment of adults with moderately to severely active rheumatoid arthritis. • Treatment of adult patients with active psoriatic arthritis. • Treatment of adults with active ankylosing spondylitis. • Treatment of adults with moderate-to-severe plaque psoriasis who are candidates for systemic therapy or phototherapy. • Treatment of adults with active non-radiographic axial spondyloarthritis who have objective signs of inflammation.	1,200	18 years	N/A	N/A	Y	Y		5/1/2019
Drugs	J0720	Injection, chloramphenicol sodium succinate, up to 1 g	up to 1 g	1/1/2000	N/A	chloramphenicol sodium succinate for injection, for intravenous administration	**Chloramphenicol must be used only in those serious infections for which less potentially dangerous drugs are ineffective or contraindicated. (See package insert for recommendations and warnings associated with chloramphenicol.) Indicated for: • Acute infections caused by Salmonella typhi. In treatment of typhoid fever some authorities recommend that chloramphenicol be administered at therapeutic levels for 8 to 10 days after the patient has become afebrile to lessen the possibility of relapse. It is not recommended for the routine treatment of the typhoid carrier state. • Serious infections caused by susceptible strains in accordance with the concepts expressed in the package insert: - Salmonella species - H. influenzae, specifically meningeal infections - Rickettsia - Lymphogranuloma-psittacosis group - Various gram-negative bacteria causing bacteremia, meningitis or other serious gram-negative infections. - Other susceptible organisms which have been demonstrated to be resistant to all other appropriate antimicrobial agents. • Cystic fibrosis regimens	217	N/A	N/A	N/A	Y	Y		10/4/2018
Biologicals	J0725	Injection, chorionic gonadotropin, per 1,000 USP units	1,000 USP units	1/1/2000	Novarel®, Pregnyl®	chorionic gonadotropin for injection	Indicated for: • Prepubertal cryptorchidism not due to anatomic obstruction. In general, HCG is thought to induce testicular descent in situations when descent would have occurred at puberty. HCG thus may help to predict whether or not orchiopexy will be needed in the future. Although, in some cases, descent following HCG administration is permanent, in most cases the response is temporary. Therapy is usually instituted between the ages of 4 and 9. • Selected cases of hypogonadotropic hypogonadism (hypogonadism secondary to a pituitary deficiency) in males. • Induction of ovulation and pregnancy in the anovulatory, infertile woman in whom the cause of anovulation is secondary and not due to primary ovarian failure, and who has been appropriately pretreated with human menotropins.	60	4 years	N/A	N/A	Y	Y		6/19/2023
Drugs	J0735	Injection, clonidine hydrochloride, 1 mg	1 mg	1/1/2000	Duraclon®	clonidine hydrochloride injection solution	Indicated in combination with opiates for the treatment of severe pain in cancer patients that is not adequately relieved by opioid analgesics alone. Epidural clonidine is more likely to be effective in patients with neuropathic pain than somatic or visceral pain.	See Comments	N/A	N/A	N/A	Y	Y	Maximum daily and monthly doses are individualized and patient specific.	10/4/2018
Drugs	J0739	Injection, cabotegravir, 1 mg, FDA approved prescription, only for use as HIV pre-exposure prophylaxis (not for use as treatment for HIV)	1 mg	1/1/2000	Apretude	cabotegravir extended-release injectable suspension, for intramuscular use	Indicated in at-risk adults and adolescents weighing at least 35 kg for PrEP to reduce the risk of sexually acquired HIV-1 infection.	1,200	12 years	N/A	N/A	Y	Y		1/4/2024
Drugs	J0740	Injection, cidofovir, 375 mg	375 mg	1/1/2000	Vistide®	cidofovir injection for intravenous infusion	Indicated for the treatment of cytomegalovirus (CMV) retinitis in patients with acquired immunodeficiency syndrome (AIDS).	6	18 years	N/A	N/A	Y	Y		9/27/2018
Drugs	J0741	Injection, cabotegravir and rilpivirine, 2mg/3mg	2 mg/3 mg	10/1/2021	Cabenuva™	cabotegravir extended-release injectable suspension; rilpivirine extended-release injectable suspension, co-packaged for intramuscular use	Indicated as a complete regimen for the treatment of HIV-1 infection in adults and adolescents 12 years of age and older and weighing at least 35 kg to replace the current antiretroviral regimen in those who are virologically suppressed (HIV-1 RNA less than 50 copies per mL) on a stable antiretroviral regimen with no history of treatment failure and with no known or suspected resistance to either cabotegravir or rilpivirine.	600	12 years	N/A	N/A	Y	Y		4/21/2022
Drugs	J0742	Injection, imipenem 4 mg, cilastatin 4 mg and relebactam 2 mg	10 mg	7/1/2020	Recarbrio™	imipenem, cilastatin, and relebactam for injection, for intravenous use	Indicated in patients 18 years of age and older who have limited or no alternative treatment options, for the treatment of the following infections caused by susceptible gram-negative bacteria: • Complicated urinary tract infections, including pyelonephritis (cUTI) • Complicated intra-abdominal infections (cIAI) • Hospital-acquired bacterial pneumonia and ventilator-associated bacterial pneumonia (HABP/VABP) To reduce the development of drug-resistant bacteria and maintain the effectiveness of Recarbrio and other antibacterial drugs, Recarbrio should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	7,000	18 years	N/A	N/A	Y	Y		7/28/2020

Drugs	J0877	Injection, daptomycin (hospira), not therapeutically equivalent to j0878, 1 mg	1 mg	1/1/2023	N/A	daptomycin for injection, for intravenous use (Hospira)	Indicated for the treatment of: • Complicated skin and skin structure infections (cSSSI) in adult patients • Staphylococcus aureus bloodstream infections (bacteremia), in adult patients including those with right-sided infective endocarditis Limitations of Use: • This Daptomycin for Injection product is not approved for use in pediatric patients. • Daptomycin for Injection is not indicated for the treatment of pneumonia. • Daptomycin for Injection is not indicated for the treatment of left-sided infective endocarditis due to S. aureus. • Daptomycin for Injection is not recommended in pediatric patients younger than one year of age due to the risk of potential effects on muscular, neuromuscular, and/or nervous systems (either peripheral and/or central) observed in neonatal dogs. To reduce the development of drug-resistant bacteria and maintain the effectiveness of Daptomycin for Injection and other antibacterial drugs, Daptomycin for Injection should be used to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	27,900	18 years	N/A	N/A	Y	Y		6/25/2024
Drugs	J0878	Injection, daptomycin, 1 mg	1 mg	1/1/2005	Cubicin®	daptomycin injection, for intravenous use	Indicated for the treatment of: - Complicated skin and skin structure infections (cSSSI) in adult and pediatric patients (1 to 17 years of age). - Staphylococcus aureus bloodstream infections (bacteremia), in adult patients including those with right-sided infective endocarditis. - Indicated for the treatment of Staphylococcus aureus bloodstream infections (bacteremia) in pediatric patients (1 to 17 years of age). Limitations of Use: - Cubicin is not indicated for the treatment of pneumonia. - Cubicin is not indicated for the treatment of left-sided infective endocarditis due to S. aureus. - Cubicin is not recommended in pediatric patients younger than one year of age due to the risk of potential effects on muscular, neuromuscular, and/or nervous systems (either peripheral and/or central) observed in neonatal dogs.	31,000	1 year	N/A	N/A	Y	Y		6/25/2024
Drugs	J0879	Injection, difelikefalin, 0.1 microgram, (for esrd on dialysis)	0.1 mcg	4/1/2002	Korsuva™	difelikefalin injection, for intravenous use	Indicated for the treatment of moderate-to-severe pruritus associated with chronic kidney disease (CKD-aP) in adults undergoing hemodialysis (HD). Limitation of Use: Korsuva has not been studied in patients on peritoneal dialysis and is not recommended for use in this population.	19,500	18 years	N/A	N/A	Y	Y		4/21/2022
Biologicals	J0881	Injection, darbepoetin alfa, 1 microgram (non-ESRD use)	1 mcg	1/1/2006	Aranesp®	darbepoetin alfa injection, for intravenous or subcutaneous use (non-ESRD use)	Indicated for the treatment of anemia due to: • Chronic Kidney Disease (CKD) in patients on dialysis and patient not on dialysis. • The effects of concomitant myelosuppressive chemotherapy, and upon initiation, there is a minimum of two additional months of planned chemotherapy. Limitations of Use: Aranesp has not been shown to improve quality of life, fatigue, or patient well-being. Aranesp is not indicated for use: • In patients with cancer receiving hormonal agents, biologic products, or radiotherapy, unless also receiving concomitant myelosuppressive chemotherapy. • In patients with cancer receiving myelosuppressive chemotherapy when the anticipated outcome is cure. • In patients with cancer receiving myelosuppressive chemotherapy in whom the anemia can be managed by transfusion. • As a substitute for RBC transfusions in patients who require immediate correction of anemia.	1,575	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • CKD: None • Cancer: 18 years of age and older	4/10/2019
Biologicals	J0882	Injection, darbepoetin alfa, 1 microgram (for ESRD on dialysis)	1 mcg	1/1/2006	Aranesp®	darbepoetin alfa injection, for intravenous or subcutaneous use (ESRD use on dialysis)	Indicated for the treatment of anemia due to: • Chronic Kidney Disease (CKD) in patients on dialysis and patients not on dialysis. • The effects of concomitant myelosuppressive chemotherapy, and upon initiation, there is a minimum of two additional months of planned chemotherapy. Limitations of Use: Aranesp has not been shown to improve quality of life, fatigue, or patient well-being. Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Drugs	J1190	Injection, dexrazoxane hydrochloride, per 250 mg	250 mg	1/1/2000	Totect®, Zinecard®	dexrazoxane for injection	Zinecard: Indicated for reducing the incidence and severity of cardiomyopathy associated with doxorubicin administration in women with metastatic breast cancer who have received a cumulative doxorubicin dose of 300 mg/m² and who will continue to receive doxorubicin therapy to maintain tumor control. Do not use with doxorubicin initiation. Totect: Indicated for the treatment of extravasation resulting from IV anthracycline chemotherapy. • Reducing the incidence and severity of cardiomyopathy associated with doxorubicin administration in women with metastatic breast cancer who have received a cumulative doxorubicin dose of 300 mg/m2 and who will continue to receive doxorubicin therapy to maintain tumor control. Do not use Totect with doxorubicin initiation.	20	18 years	N/A	Zinecard: Females Only Totect: Extravasation: N/A Cardiomyopathy: Females only	Y	Y		12/28/2020
Drugs	J1200	Injection, diphenhydramine HCl, up to 50 mg	50 mg	1/1/2000	N/A	diphenhydramine hydrochloride injection	Diphenhydramine in the injectable form is effective in adults and pediatric patients, other than premature infants and neonates, for the following conditions when diphenhydramine in the oral form is impractical: • Antihistaminic: For amelioration of allergic reactions to blood or plasma, in anaphylaxis as an adjunct to epinephrine and other standard measures after the acute symptoms have been controlled, and for other uncomplicated allergic conditions of the immediate type when oral therapy is impossible or contraindicated. • Motion Sickness: For active treatment of motion sickness. • Antiparkinsonism: For use in parkinsonism, when oral therapy is impossible or contraindicated, as follows: parkinsonism in the elderly who are unable to tolerate more potent agents; mild cases of parkinsonism in other age groups, and in other cases of parkinsonism in combination with centrally acting anticholinergic agents.	248	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Contraindicated in newborns or premature infants.	10/4/2018
Drugs	J1202	Miglustat, oral, 65 mg	65 mg	4/1/2024	Opfolda™	miglustat capsules, for oral use	Miglustat capsule is indicated, in combination with Pombiliti, for the treatment of adult patients with late-onset Pompe disease (lysosomal acid alpha-glucosidase [GAA] deficiency) weighing ≥40 kg and who are not improving on their current enzyme replacement therapy (ERT).	12	18 years	N/A	N/A	Y	Y		3/22/2024
Biologicals	J1203	Injection, cipaglucosidase alfa-atga, 5 mg	5 mg	4/1/2024	Pombiliti™	cipaglucosidase alfa-atga for injection, for intravenous use	Indicated, in combination with Opfolda, an enzyme stabilizer, for the treatment of adult patients with late-onset Pompe disease (lysosomal acid alpha-glucosidase [GAA] deficiency) weighing ≥40 kg and who are not improving on their current enzyme replacement therapy (ERT).	1,701	18 years	N/A	N/A	Y	Y		3/22/2024
Drugs	J1205	Injection, chlorothiazide sodium, per 500 mg	500 mg	1/1/2000	N/A	chlorothiazide sodium for injection	Indicated as adjunctive therapy in edema associated with congestive heart failure, hepatic cirrhosis, and corticosteroid and estrogen therapy.	100	18 years	N/A	N/A	Y	Y		9/27/2018
Drugs	J1212	Injection, DMSO, dimethyl sulfoxide, 50%, 50 mL	50 mL	1/1/2000	RIMSO-50®	dimethyl sulfoxide (DMSO) irrigation	Indicated for symptomatic relief of patients with interstitial cystitis.	3	N/A	N/A	N/A	Y	Y		10/4/2018
Drugs	J1230	Injection, methadone HCl, up to 10 mg	up to 10 mg	1/1/2000	N/A	methadone hydrochloride injection	Indicated for: • The management of pain severe enough to require an opioid analgesic and for which alternative treatment options are inadequate. Limitations of Use: Because of the risks of addiction, abuse, and misuse with opioids, even at recommended doses, reserve methadone injection for use in patients for whom alternative treatment options (e.g. non-opioid analgesics or opioid combination products): o Have not been tolerated, or are not expected to be tolerated. o Have not provided adequate analgesia, or not expected to provide adequate analgesia. • Use in temporary treatment of opioid dependence in patients unable to take oral medication. Limitations of Use: Injectable methadone products are not approved for the outpatient treatment of opioid dependence. In this patient population, parenteral methadone is to be used only for patients unable to take oral medication, such as hospitalized patients.	93	18 years	N/A	N/A	Y	Y		10/26/2018
Drugs	J1240	Injection, dimenhydrinate, up to 50 mg	up to 50 mg	1/1/2000	N/A	dimenhydrinate injection	Indicated for prevention and treatment of nausea, vomiting and vertigo of motion sickness.	372	N/A	N/A	N/A	Y	Y		6/10/2019
Drugs	J1245	Injection, dipyridamole, per 10 mg	per 10 mg	1/1/2000	N/A	dipyridamole injection	As an alternative to exercise in thallium myocardial perfusion imaging for the evaluation of coronary artery disease in patients who cannot exercise adequately.	6	18 years	N/A	N/A	Y	Y		6/10/2019
Drugs	J1250	Injection, dobutamine hydrochloride, per 250 mg	250 mg	1/1/2000	N/A	dobutamine injection	Indicated: • When parenteral therapy is necessary for inotropic support in the short-term treatment of adults with cardiac decompensation due to depressed contractility resulting either from organic heart disease or from cardiac surgical procedures. • In patients who have atrial fibrillation with rapid ventricular response, a digitalis preparation should be used prior to institution of therapy with dobutamine.	930	18 years	N/A	N/A	Y	Y		10/4/2018
Drugs	J1265	Injection, dopamine hydrochloride, 40 mg	40 mg	1/1/2006	N/A	dopamine hydrochloride	Indicated for the correction of hemodynamic imbalances present in the shock syndrome due to myocardial infarction, trauma, endotoxic septicemia, open-heart surgery, renal failure, and chronic cardiac decompensation as in congestive failure.	6,355	18 years	N/A	N/A	Y	Y		10/4/2018
Drugs	J1270	Injection, doxercalciferol, 1 mcg	1 mcg	1/1/2002	Hectorol®	doxercalciferol injection	Indicated for the treatment of secondary hyperparathyroidism in adult patients with chronic kidney disease on dialysis.	90	18 years	N/A	N/A	Y	Y		10/4/2018
Drugs	J1290	Injection, ecallantide, 1 mg	1 mg	1/1/2011	Kalbitor®	ecallantide injection for subcutaneous use	Indicated for treatment of acute attacks of hereditary angioedema in patients 12 years of age and older.	120	12 years	N/A	N/A	Y	Y		10/10/2018
Biologicals	J1300	Injection, eculizumab, 10 mg	10 mg	1/1/2008	Soliris®	eculizumab injection, for intravenous use	Indicated for: • Treatment of patients with paroxysmal nocturnal hemoglobinuria (PNH) to reduce hemolysis. • Treatment of patients with atypical hemolytic uremic syndrome (aHUS) to inhibit complement-mediated thrombotic microangiopathy. • Treatment of adult patients with generalized Myasthenia Gravis (gMG) who are anti-acetylcholine receptor (AchR) antibody positive. • Treatment of neuromyelitis optica spectrum disorder (NMOSD) in adult patients who are anti-aquaporin-4 (AQP4) antibody positive. Limitation of Use: Soliris is not indicated for the treatment of patients with Shiga toxin E. coli related hemolytic uremic syndrome (STEC-HUS).	480	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • PNH: 18 years of age and older • aHUS: None • Myasthenia Gravis: 18 years of age and older	7/26/2019
Drugs	J1301	Injection, edaravone, 1 mg	1 mg	1/1/2019	Radicava®	edaravone injection, for intravenous use	Indicated for the treatment of amyotrophic lateral sclerosis (ALS).	1,020	18 years	N/A	N/A	Y	Y		10/10/2018

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Biologicals	J1302	Injection, sutimlimab-jome, 10 mg	10 mg	10/1/2022	Enjaymo™	sutimlimab-jome injection, for intravenous use	Indicated for the treatment of hemolysis in adults with cold agglutinin disease (CAD).	2,310	18 years	N/A	N/A	Y	Y		2/23/2023
Biologicals	J1303	Injection, ravulizumab-cwvz, 10 mg	10 mg	10/1/2019	Ultomiris™	ravulizumab-cwvz injection, for intravenous use	Indicated for: - the treatment of adult and pediatric patients one month of age and older with paroxysmal nocturnal hemoglobinuria (PNH). - the treatment of adults and pediatric patients one month of age and older with atypical hemolytic uremic syndrome (aHUS) to inhibit complement-mediated thrombotic microangiopathy (TMA). Limitations of Use: Ultomiris is not indicated for the treatment of patients with Shiga toxin E. coli related hemolytic uremic syndrome (STEC-HUS). - the treatment of adult patients with generalized myasthenia gravis (gMG) who are anti-acetylcholine receptor (AChR) antibody-positive. - the treatment of adult patients with neuromyelitis optica spectrum disorder (NMOSD) who are anti-aquaporin-4 (AQP4) antibody positive.	660	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	PNH and aHUS: 1 month of age and older gMG and NMOSD: 18 years of age and older	5/3/2024
Drugs	J1304	Injection, tofersen, 1 mg	1 mg	1/1/2024	Qalsody™	tofersen injection, for intrathecal use	Indicated for the treatment of amyotrophic lateral sclerosis (ALS) in adults who have a mutation in the superoxide dismutase 1 (SOD1) gene.	300	18 years	N/A	N/A	Y	Y		12/22/2023
Biologicals	J1305	Injection, evinacumab-dgnb, 5mg	5 mg	10/1/2021	Evkeeza™	evinacumab-dgnb injection, for intravenous use	Indicated as an adjunct to other low-density lipoprotein-cholesterol (LDL-C) lowering therapies for the treatment of adult and pediatric patients, aged 5 years and older, with homozygous familial hypercholesterolemia (HoFH). Limitations of Use: • The safety and effectiveness of Evkeeza have not been established in patients with other causes of hypercholesterolemia, including those with heterozygous familial hypercholesterolemia (HeFH). • The effects of Evkeeza on cardiovascular morbidity and mortality have not been determined.	894	5 years	N/A	N/A	Y	Y		4/25/2023
Drugs	J1306	Injection, inclisiran, 1 mg	1 mg	1/1/2000	Leqvio®	inclisiran injection, for subcutaneous use	Indicated as an adjunct to diet and maximally tolerated statin therapy for the treatment of adults with heterozygous familial hypercholesterolemia (HeFH) or clinical atherosclerotic cardiovascular disease (ASCVD), who require additional lowering of low-density lipoprotein cholesterol (LDL-C).	284	18 years	N/A	N/A	Y	Y		9/13/2023
Biologicals	J1322	Injection, elosulfase alfa, 1 mg	1 mg	1/1/2015	Vimizim®	elosulfase alfa injection, for intravenous use	Indicated for patients with Mucopolysaccharidosis type IVA (MPS IVA; Morquio A syndrome).	1,400	5 years	N/A	N/A	Y	Y		6/8/2019
Biologicals	J1323	Injection, elranatamab-bcmm, 1 mg	1 mg	4/1/2024	Elrexfio™	elranatamab-bcmm injection, for subcutaneous use	Indicated for the treatment of adult patients with relapsed or refractory multiple myeloma who have received at least four prior lines of therapy including a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 monoclonal antibody.	380	18 years	N/A	N/A	Y	Y		4/12/2024
Drugs	J1325	Injection, epoprostenol, 0.5 mg	0.5 mg	1/1/2000	Flolan®, Veletri®	epoprostenol for injection, for intravenous use	Indicated for the treatment of pulmonary arterial hypertension (PAH) (WHO Group I) to improve exercise capacity. Studies establishing effectiveness included predominantly (97%) patients with NYHA Functional Class III-IV symptoms and etiologies of idiopathic or heritable PAH (49%) or PAH associated with connective tissue diseases (51%).	248	18 years	N/A	N/A	Y	Y		6/4/2019
Drugs	J1335	Injection, ertapenem sodium, 500 mg	500 mg	1/1/2004	Invanz®	ertapenem injection for intravenous or intramuscular use	Indicated in adult patients and pediatric patients (3 months of age and older) for the treatment of the following moderate to severe infections caused by susceptible bacteria: • Complicated intra-abdominal infections. • Complicated skin and skin structure infections, including diabetic foot infections without osteomyelitis. • Community-acquired pneumonia. • Complicated urinary tract infections including pyelonephritis. • Acute pelvic infections including postpartum endomyometritis, septic abortion and post surgical gynecologic infections. Indicated in adults for the prophylaxis of surgical site infection following elective colorectal surgery.	28	3 months	N/A	N/A	Y	Y		10/10/2018
Drugs	J1364	Injection, erythromycin lactobionate, per 500 mg	500 mg	1/1/2000	Erythrocin™	erythromycin lactobionate for injection	Indicated in the treatment of infections caused by susceptible strains of the designated organisms in the diseases listed below when oral administration is not possible or when the severity of the infection requires immediate high serum levels of erythromycin. Intravenous therapy should be replaced by oral administration at the appropriate time. • Upper respiratory tract infections of mild to moderate degree caused by Streptococcus pyogenes (Group A beta-hemolytic streptococci); Streptococcus pneumoniae (Diplococcus pneumoniae); Haemophilus influenzae (when used concomitantly with adequate doses of sulfonamides, since many strains of H. influenzae are not susceptible to the erythromycin concentrations ordinarily achieved). • Lower respiratory tract infections of mild to moderate severity caused by Streptococcus pyogenes (Group A beta-hemolytic streptococci); Streptococcus pneumoniae (Diplococcus pneumoniae). • Respiratory tract infections due to Mycoplasma pneumoniae. • Skin and skin structure infections of mild to moderate severity caused by Streptococcus pyogenes and Staphylococcus aureus (resistant staphylococci may emerge during treatment). • Diphtheria: As an adjunct to antitoxin infections due to Corynebacterium diphtheriae to prevent establishment of carriers and to eradicate the organism in carriers. • Erythrasma: In the treatment of infections due to Corynebacterium minutissimum. • Acute pelvic inflammatory disease caused by Neisseria gonorrhoeae: Erythrocin Lactobionate-IV (erythromycin lactobionate for injection, USP) followed by erythromycin stearate or erythromycin base orally, as an alternative drug in treatment of acute pelvic inflammatory disease caused by N. gonorrhoeae in female patients with a history of sensitivity to penicillin. • Before treatment of gonorrhea, patients who are suspected of also having syphilis should have a microscopic examination for T. pallidum (by immunofluorescence or darkfield) before receiving erythromycin and monthly serologic tests for a minimum of 4 months thereafter. • Legionnaires' Disease caused by Legionella pneumophila. Although no controlled clinical efficacy studies have been conducted, in vitro and limited preliminary clinical data suggest that erythromycin may be effective in treating Legionnaires' Disease.	248	N/A	N/A	N/A	Y	Y		10/10/2018

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Category	HCPCS Code	HCPCS Description	HCPCS Code Billing Unit	HCPCS Effective Date	Brand Name	Generic Name	FDA Approved Indications (See Package Insert for full FDA approved indication descriptions)	NC Suggested Max Monthly Units	Minimum Age	Maximum Age	Gender Restrictions	NDC Required	Rebating Labeler Required	Comments	Last Modified Date
Immune Globulins	J1559	Injection, immune globulin (Hizentra), 100 mg	100 mg	1/1/2011	Hizentra®	immune globulin subcutaneous (human), 20% liquid	• Indicated as replacement therapy for primary immunodeficiency (PI) in adults and pediatric patients 2 years of age and older. This includes, but is not limited to, the humoral immune defect in congenital agammaglobulinemia, common variable immunodeficiency, X-linked agammaglobulinemia, Wiskott-Aldrich syndrome and severe combined immunodeficiencies. • Indicated as maintenance therapy for the treatment of adult patients with chronic inflammatory demyelinating polyneuropathy (CIDP) to prevent relapse of neuromuscular disability and impairment.	2,800	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • PI - 2 years of age and older • CDIP - 18 years of age and older	7/16/2018
Immune Globulins	J1560	Injection, gamma globulin, intramuscular, over 10 cc (always use for any amount injected over 10cc and place number of units)	10 cc	1/1/2000	GamaSTAN® S/D, GamaSTAN®	immune globulin (human), solution for intramuscular injection greater than 10 cc	Indicated: • For prophylaxis following exposure to hepatitis A. • To prevent or modify measles in a susceptible person exposed fewer than 6 days previously. • To modify varicella. • To modify rubella in exposed women who will not consider a therapeutic abortion. • Not indicated for routine prophylaxis or treatment of viral hepatitis type B, rubella, poliomyelitis, mumps or varicella.	17	18 years	N/A	N/A	Y	Y		9/21/2018
Immune Globulins	J1561	Injection, immune globulin, (Gamunex-C/Gammaked), non-lyophilized (e.g. liquid), 500 mg	500 mg	1/1/2013	Gammaked™, Gamunex®-C	immune globulin injection (human), 10% caprylate/chromatography purified	Gamunex-C is indicated for: • Primary Humoral Immunodeficiency (PI) in patients 2 years of age and older • Idiopathic Thrombocytopenic Purpura (ITP) in adults and children • Chronic Inflammatory Demyelinating Polyneuropathy (CIDP) in adults Gammaked is indicated for: • Primary Humoral Immunodeficiency (PI) in patients 2 years of age and older • Idiopathic Thrombocytopenic Purpura (ITP) • Chronic Inflammatory Demyelinating Polyneuropathy (CIDP)	840	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • Primary Humoral Immunodeficiency (PI): 2 years of age and older • Idiopathic Thrombocytopenic Purpura (ITP): None • Chronic Inflammatory Demyelinating Polyneuropathy (CIDP): 18 years of age and older	9/12/2018
Immune Globulins	J1566	Injection, immune globulin, intravenous, lyophilized (e.g. powder), not otherwise specified, 500mg	500 mg	1/1/2006	Carimune NF®, Gammagard S/D	immune globulin intravenous (human), lyophilized, nanofiltered - Carimune NF immune globulin intravenous (human), solvent detergent treated - Gammagard S/D	Carimune NF: Indicated for the maintenance treatment of patients with primary immunodeficiencies (PID), e.g., common variable immunodeficiency, X-linked agammaglobulinemia, severe combined immunodeficiency. Gammagard S/D: Indicated for the treatment of Primary Immunodeficiency (PI) in adults and pediatric patients two years of age or older, prevention of bacterial infections in hypogammaglobulinemia and/or recurrent bacterial infections associated with B-cell Chronic Lymphocytic Leukemia (CLL), prevention and/or control of bleeding in adult Chronic Idiopathic Thrombocytopenic Purpura (ITP) patients and prevention of coronary artery aneurysms associated with Kawasaki syndrome in pediatric patients.	952	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • Carimune NF: - PID: None - ITP: None • Gammagard S/D: - PI: 2 years of age and older - Chronic ITP: 18 years of age and older - Kawasaki Disease: None - CLL: None	9/8/2021
Immune Globulins	J1568	Injection, immune globulin, (Octagam), intravenous, non-lyophilized (e.g. liquid), 500 mg	500 mg	1/1/2008	Octagam®	immune globulin intravenous (human) liquid solution for intravenous administration	Octagam 5%: Indicated for the treatment of primary humoral immunodeficiency. Octagam 10%: Indicated for the treatment of: • Chronic immune thrombocytopenic purpura (ITP) in adults. • Dermatomyositis (DM) in adults.	• Octagam 5%: 336 units • Octagam 10%: 1,120 units	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Product specific age restrictions: • Octagam 5%: 6 years of age and older. • Octagam 10%: 18 years of age and older.	8/25/2021
Immune Globulins	J1569	Injection, immune globulin, (Gammagard liquid), non-lyophilized, (e.g. liquid), 500 mg	500 mg	1/1/2008	Gammagard Liquid	immune globulin infusion (human), 10% solution, for intravenous and subcutaneous administration	Indicated as a: - replacement therapy for primary humoral immunodeficiency (PI) in adult and pediatric patients two years of age or older - maintenance therapy to improve muscle strength and disability in adult patients with Multifocal Motor Neuropathy (MMN) - therapy to improve neuromuscular disability and impairment in adult patients with Chronic Inflammatory Demyelinating Polyneuropathy (CIDP) Limitations of Use: • Safety and effectiveness of Gammagard Liquid has not been studied in immunoglobulin-naïve patients with CIDP. • Gammagard Liquid maintenance therapy in CIDP has not been studied beyond 6 months.	840	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • PI: 2 years and older • MMN and CIDP: 18 years and older	2/27/2024
Drugs	J1570	Injection, ganciclovir sodium, 500 mg	500 mg	1/1/2000	Cytovene®-IV	ganciclovir sodium for injection, for intravenous use	Indicated for: • Treatment of CMV retinitis in immunocompromised individuals, including patients with acquired immunodeficiency syndrome (AIDS). • Prevention of CMV disease in adult transplant recipients at risk for CMV disease.	104	18 years	N/A	N/A	Y	Y		12/19/2022
Immune Globulins	J1571	Injection, hepatitis B immune globulin (Hepagam B), intramuscular, 0.5 mL	0.5 mL	1/1/2008	Hepagam B®	hepatitis b immune globulin intramuscular (human)	Indicated for post exposure prophylaxis in the following settings: • Acute Exposure to Blood Containing HBsAg • Perinatal Exposure of Infants Born to HBsAg-positive Mothers • Sexual Exposure to HBsAg-positive Persons • Household Exposure to Persons with Acute HBV Infection	34	N/A	N/A	N/A	Y	Y		9/12/2018
Immune Globulins	J1572	Injection, immune globulin, (Flebogamma/Flebogamma DIF), intravenous, non-lyophilized (e.g. liquid), 500 mg	500 mg	1/1/2008	Flebogamma®	immune globulin intravenous (human) for intravenous administration, 10% liquid preparation	Indicated for the treatment of: • Primary (inherited) Immunodeficiency (PI). • Chronic Primary Immune Thrombocytopenia (ITP) in patients 2 years of age and older.	560	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • Primary (inherited) Immunodeficiency (PI): None • Chronic Primary Immune Thrombocytopenia (ITP): In patients 2 years of age and older.	7/3/2018
Immune Globulins	J1573	Injection, hepatitis B immune globulin (Hepagam B), intravenous, 0.5 mL	0.5 mL	1/1/2008	HepaGam B®	hepatitis b immune globulin intravenous (human)	Indicated for the prevention of hepatitis B virus recurrence after liver transplantation in HBsAg-positive transplant patients (HepaGam B) – IV only.	1,290	N/A	N/A	N/A	y	Y		7/3/2018

Immune Globulins	J1576	Injection, immune globulin (panzyga), intravenous, non-lyophilized (e.g., liquid), 500 mg	500 mg	7/1/2023	Panzyga®	immune globulin intravenous, human - ifas	Indicated for the treatment of: • Primary humoral immunodeficiency (PI) in patients 2 years of age and older. • Chronic immune thrombocytopenia (ITP) in adults. • Chronic inflammatory demyelinating polyneuropathy (CIDP) in adults.	1,120	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • Primary humoral immunodeficiency (PI) - 2 years of age and older • Chronic immune thrombocytopenia (ITP) and chronic inflammatory demyelinating polyneuropathy (CIDP) - 18 years of age and older	6/22/2023
Drugs	J1580	Injection, garamycin, gentamicin, up to 80 mg	up to 80 mg	1/1/2000	Garamycin®	gentamicin sulfate injection, for intravenous infusion or intramuscular injection	• Indicated in the treatment of serious infections caused by susceptible strains of the following microorganisms: Pseudomonas aeruginosa, Proteus species (indolepositive and indole-negative), Escherichia coli, Klebsiella-Enterobacter-Serratia species, Citrobacter species, and Staphylococcus species (coagulase-positive and coagulase-negative). • Clinical studies have shown gentamicin to be effective in bacterial neonatal sepsis; bacterial septicemia; and serious bacterial infections of the central nervous system (meningitis), urinary tract, respiratory tract, gastrointestinal tract (including peritonitis), skin, bone and soft tissue (including burns). • Gentamicin sulfate may be considered as initial therapy in suspected or confirmed gram-negative infections, and therapy may be instituted before obtaining results of susceptibility testing. The decision to continue therapy with this drug should be based on the results of susceptibility tests, the severity of the infection, and the important additional concepts. If the causative organisms are resistant to gentamicin, other appropriate therapy should be instituted. • In serious infections when the causative organisms are unknown, gentamicin sulfate may be administered as initial therapy in conjunction with a penicillin-type or cephalosporin-type drug before obtaining results of susceptibility testing. If anaerobic organisms are suspected as etiologic agents, consideration should be given to using other suitable antimicrobial therapy in conjunction with gentamicin. Following identification of the organism and its susceptibility, appropriate antibiotic therapy should then be continued. • Gentamicin sulfate has been used effectively in combination with carbenicillin for the treatment of life-threatening infections caused by Pseudomonas aeruginosa. It has also been found effective when used in conjunction with a penicillin-type drug for the treatment of endocarditis caused by group D streptococci. • Gentamicin has also been shown to be effective in the treatment of serious staphylococcal infections. While not the antibiotic of first choice, gentamicin may be considered when penicillins or other less potentially toxic drugs are contraindicated and bacterial susceptibility tests and clinical judgment indicate its use. It may also be considered in mixed infections caused by susceptible strains of staphylococci and gram-negative organisms. • In the neonate with suspected bacterial sepsis or staphylococcal pneumonia, a penicillin-type drug is	279	N/A	N/A	N/A	Y	Y		6/4/2019
Biologicals	J1602	Injection, golimumab, 1 mg, for intravenous use	1 mg	1/1/2014	Simponi Aria®	golimumab injection, for intravenous use	Indicated for treatment of adult patients with: • Moderately to severely active Rheumatoid Arthritis (RA) in combination with methotrexate. • Active Ankylosing Spondylitis (AS). Indicated for treatment in patients 2 years of age and older with: • Active Psoriatic Arthritis (PsA). • Active polyarticular Juvenile Idiopathic Arthritis (pJIA)	560	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: Rheumatoid Arthritis and Ankylosing Spondylitis: 18 years of age and older Polyarticular Juvenile Idiopathic Arthritis and Psoriatic Arthritis: 2 years of age and older	10/21/2020
Drugs	J1610	Injection, glucagon hydrochloride, per 1 mg	1 mg	1/1/2000	GlucaGen®	glucagon for injection, for subcutaneous, intramuscular, or intravenous use	Indicated for: • Treatment of severe hypoglycemia. • Use as a diagnostic aid for use during radiologic examinations to temporarily inhibit movement of the gastrointestinal tract.	10	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • Treatment of severe hypoglycemia: None • Diagnostic aid: 18 years of age and old	10/26/2018

Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Drugs	J1720	Injection, hydrocortisone sodium succinate, up to 100 mg	up to 100 mg	1/1/2000	Solu-Cortef®	hydrocortisone sodium succinate for injection, for intravenous or intramuscular administration	When oral therapy is not feasible, and the strength, dosage form, and route of administration of the drug reasonably lend the preparation to the treatment of the condition, the intravenous or intramuscular use of Solu-Cortef is indicated as follows: • Allergic States: Control of severe or incapacitating allergic conditions intractable to adequate trials of conventional treatment in asthma, atopic dermatitis, contact dermatitis, drug hypersensitivity reactions, serum sickness, transfusion reactions. • Dermatologic Diseases: Bullous dermatitis herpetiformis, exfoliative erythroderma, mycosis fungoides, pemphigus, severe erythema multiforme (Stevens-Johnson syndrome). • Endocrine Disorders: Primary or secondary adrenocortical insufficiency (hydrocortisone or cortisone is the drug of choice; synthetic analogs may be used in conjunction with mineralocorticoids where applicable; in infancy, mineralocorticoid supplementation is of particular importance), congenital adrenal hyperplasia, hypercalcemia associated with cancer, nonsuppurative thyroiditis. • Gastrointestinal Diseases: To tide the patient over a critical period of the disease in regional enteritis (systemic therapy) and ulcerative colitis. • Hematologic Disorders: Acquired (autoimmune) hemolytic anemia, congenital (erythroid) hypoplastic anemia (Diamond Blackfan anemia), idiopathic thrombocytopenic purpura in adults (intravenous administration only; intramuscular administration is contraindicated), pure red cell aplasia, select cases of secondary thrombocytopenia. • Miscellaneous: Trichinosis with neurologic or myocardial involvement, tuberculous meningitis with subarachnoid block or impending block when used concurrently with appropriate antituberculous chemotherapy. • Neoplastic Diseases: For the palliative management of leukemias and lymphomas. • Nervous System: Acute exacerbations of multiple sclerosis; cerebral edema associated with primary or metastatic brain tumor, or craniotomy. • Ophthalmic Diseases: Sympathetic ophthalmia, uveitis and ocular inflammatory conditions unresponsive to topical corticosteroids. • Renal Diseases: To induce diuresis or remission of proteinuria in idiopathic nephrotic syndrome, or that due to lupus erythematosus	155	N/A	N/A	N/A	Y	Y		6/28/2021
Drugs	J1729	Injection, hydroxyprogesterone caproate, Not Otherwise Specified, 10 mg	10 mg	1/1/2018	N/A	hydroxyprogesterone caproate injection	Indicated in non-pregnant women: • For the treatment of advanced adenocarcinoma of the uterine corpus (Stage III or IV) • In the management of amenorrhea (primary and secondary) and abnormal uterine bleeding due to hormonal imbalance in the absence of organic pathology, such as submucous fibroids or uterine cancer • As a test for endogenous estrogen production and for the production of secretory endometrium and desquamation.	3,100	N/A	N/A	Indicated only for non-pregnant women.	Y	Y		6/4/2019
Drugs	J1738	Injection, meloxicam, 1 mg	1 mg	10/1/2020	Anjeso™	meloxicam injection, for intravenous use	Indicated for use in adults for the management of moderate-to-severe pain, alone or in combination with non-NSAID analgesics. Limitation of Use: Because of delayed onset of analgesia, Anjeso alone is not recommended for use when rapid onset of analgesia is required.	930	18 years	N/A	N/A	Y	Y		9/21/2020
Drugs	J1740	Injection, ibandronate sodium, 1 mg	1 mg	1/1/2007	Boniva®	ibandronate injection, for intravenous use	Indicated for the treatment of osteoporosis in postmenopausal women. Limitations of Use: Optimal duration of use has not been determined. For patients at low-risk form fracture, consider drug discontinuation after 3 to 5 years of use.	3	40 years	N/A	Females Only	Y	Y		10/18/2018
Drugs	J1742	Injection, ibutilide fumarate, 1 mg	1 mg	1/1/2000	Corvert®	ibutilide fumarate injection, for intravenous infusion	Indicated for the rapid conversion of atrial fibrillation or atrial flutter of recent onset to sinus rhythm. Patients with atrial arrhythmias of longer duration are less likely to respond to ibutilide. The effectiveness of ibutilide has not been determined in patients with arrhythmias of more than 90 days in duration.	10	18 years	N/A	N/A	Y	Y		10/18/2018
Drugs	J1743	Injection, idursulfase, 1 mg	1 mg	1/1/2008	Elaprase®	idursulfase injection, for intravenous use	Indicated for patients with Hunter syndrome (Mucopolysaccharidosis II, MPS II). Elaprase has been shown to improve walking capacity in patients 5 years and older. In patients 16 months to 5 years of age, no data are available to demonstrate improvement in disease-related symptoms or long term clinical outcome; however, treatment with Elaprase has reduced spleen volume similarly to that of adults and children 5 years of age and older. The safety and efficacy of Elaprase have not been established in pediatric patients less than 16 months of age.	360	16 months	N/A	N/A	Y	Y		6/4/2019
Biologicals	J1744	Injection, icatibant, 1 mg	1 mg	1/1/2013	Firazyr®	icatibant injection, for subcutaneous use	Indicated for the treatment of acute attacks of hereditary angioedema (HAE).	2700	18 years	N/A	N/A	Y	Y		6/4/2019

Drugs	J2250	Injection, midazolam hydrochloride, per 1 mg	1 mg	1/1/2000	N/A	midazolam hydrochloride injection for intravenous or intramuscular use	Indicated: • Intramuscularly or intravenously for preoperative sedation/anxiolysis/amnesia • Intravenously as an agent for sedation/anxiolysis/amnesia prior to or during diagnostic, therapeutic or endoscopic procedures, such as bronchoscopy, gastroscopy, cystoscopy, coronary angiography, cardiac catheterization, oncology procedures, radiologic procedures, suture of lacerations and other procedures either alone or in combination with other CNS depressants; • Intravenously for induction of general anesthesia, before administration of other anesthetic agents. With the use of narcotic premedication, induction of anesthesia can be attained within a relatively narrow dose range and in a short period of time. Intravenous midazolam can also be used as a component of intravenous supplementation of nitrous oxide and oxygen (balanced anesthesia); • Continuous intravenous infusion for sedation of intubated and mechanically ventilated patients as a component of anesthesia or during treatment in a critical care setting.	25	N/A	N/A	N/A	Y	Y		10/31/2018
Drugs	J2251	Injection, midazolam hydrochloride (wg critical care), not therapeutically equivalent to j2250, per 1 mg	1 mg	1/1/2023	N/A	midazolam in sodium chloride injection for intravenous use (WG Critical Care)	Indicated for: • Continuous intravenous infusion for sedation of intubated and mechanically ventilated adult, pediatric, and neonatal patients as a component of anesthesia or during treatment in a critical care setting.	500	N/A	N/A	N/A	Y	Y		12/12/2022
Drugs	J2260	Injection, milrinone lactate, per 5 mg	per 5 mg	1/1/2000	N/A	milrinone lactate injection	Indicated for the short-term intravenous treatment of patients with acute decompensated heart failure.	64	18 years	N/A	N/A	Y	Y		6/6/2019
Biologicals	J2267	Injection, mirikizumab-mrkz, 1 mg	1 mg	7/1/2024	Omvoh™	mirikizumab-mrkz injection, for intravenous or subcutaneous use	Mirikizumab-mrkz injection is indicated for the treatment of moderately to severely active ulcerative colitis in adults.	600	18 years	N/A	N/A	Y	Y		6/24/2024
Drugs	J2270	Injection, morphine sulfate, up to 10 mg	up to 10 mg	1/1/2000	N/A	morphine sulfate injection, up to 10 mg	Indicated for the management of pain severe enough to require an opioid analgesic and for which alternative treatments are inadequate. Limitations of Use: Because of the risks of addiction, abuse, and misuse with opioids, even at recommended doses, reserve Morphine Sulfate Injection, for use in patients for whom alternative treatment options [e.g., non-opioid analgesics or opioid combination products]: • Have not been tolerated, or are not expected to be tolerated, • Have not provided adequate analgesia, or are not expected to provide adequate analgesia Prior: Indicated for: • the relief of severe acute and chronic pain • to relieve preoperative apprehension • to facilitate anesthesia induction • the treatment of dyspnea associated with acute left ventricular failure and pulmonary edema • analgesia during labor • anxiety • anesthesia • to control postoperative pain.	527	N/A	N/A	N/A	Y	Y		6/7/2019
Drugs	J2272	Injection, morphine sulfate (fresenius kabi), not therapeutically equivalent to j2270, up to 10 mg	10 mg	1/1/2023	N/A	morphine sulfate injection, for intravenous or intramuscular use, CII (Fresenius Kabi)	Indicated for the management of pain severe enough to require an opioid analgesic and for which alternative treatments are inadequate. Limitations of Use Because of the risks of addiction, abuse, and misuse with opioids, even at recommended doses, reserve Morphine Sulfate Injection, for use in patients for whom alternative treatment options [e.g., non-opioid analgesics or opioid combination products]: • Have not been tolerated, or are not expected to be tolerated, • Have not provided adequate analgesia, or are not expected to provide adequate analgesia	527	18 years	N/A	N/A	Y	Y		12/12/2022
Drugs	J2274	Injection, morphine sulfate, preservative-free for epidural or intrathecal use, 10 mg	10 mg	1/1/2015	Duramorph®, Infumorph®, Mitigo	morphine sulfate injection preservative-free	• Mitigo: for use in continuous microinfusion devices and indicated only for intrathecal or epidural infusion in the management of intractable chronic pain severe enough to require an opioid analgesic and for which alternative treatments are inadequate. • Infumorph: for use in continuous microinfusion devices and indicated only for intrathecal or epidural infusion in the management of intractable chronic pain severe enough to require an opioid analgesic and for which alternative treatments are inadequate. • Duramorph: Indicated for: o the management of pain severe enough to require use of an opioid analgesic by intravenous administration and for which alternative treatments are not expected to be adequate. o the epidural or intrathecal management of pain without attendant loss of motor, sensory, or sympathetic function. o Limitation of Use: Duramorph is not for use in continuous microinfusion devices. Prior to 10/30/2018: Morphine sulfate (preservative-free sterile solution) is a systemic narcotic analgesic for administration by the intravenous, epidural, or intrathecal routes. It is used for the management of pain not responsive to non-narcotic analgesics. Morphine sulfate (preservative-free sterile solution) administered epidurally or intrathecally, provides pain relief for extended periods without attendant loss of motor, sensory, or sympathetic function. Infumorph® is indicated only for intrathecal or epidural infusion in the treatment of intractable chronic pain. It is not recommended for single-dose intravenous, intramuscular, or subcutaneous administration due to the large amount of morphine in the ampule and the associated risk of overdosage.	100	18 years	N/A	N/A	Y	Y		4/9/2022
Drugs	J2277	Injection, motixafortide, 0.25 mg	0.25 mg	4/1/2024	Aphexda™	motixafortide for injection, for subcutaneous use	Indicated in combination with filgrastim (G-CSF) to mobilize hematopoietic stem cells to the peripheral blood for collection and subsequent autologous transplantation in patients with multiple myeloma.	1,488	18 years	N/A	N/A	Y	Y		3/22/2024

Drugs	J2278	Injection, ziconotide, 1 microgram	1 mcg	1/1/2006	Prialt®	ziconotide solution, intrathecal infusion	Indicated for the management of severe chronic pain in patients for whom intrathecal therapy is warranted, and who are intolerant of or refractory to other treatment, such as systemic analgesics, adjunctive therapies, or intrathecal morphine.	620	18 years	N/A	N/A	Y	Y		9/21/2018
Drugs	J2300	Injection, nalbuphine hydrochloride, per 10 mg	10 mg	1/1/2000	N/A	nalbuphine hydrochloride injection, solution	Indicated for management of pain severe enough to require an opioid analgesic and for which alternative treatments are inadequate. Also can be used as a supplement to balanced anesthesia, for pre/post operative analgesia and obstetrical analgesia during labor and delivery. Limitations of Use: Because of the risks of addiction, abuse, and misuse with opioids, even at recommended doses, reserve nalbuphine injection for use in patients for whom alternative treatment options (e.g. non-opioid analgesics): • have not been tolerated, or are not expected to be tolerated. • have not provided adequate analgesia, or are not expected to provide adequate analgesia.	248	18 years	N/A	N/A	Y	Y		10/26/2018
Drugs	J2310	Injection, naloxone hydrochloride, per 1 mg	1 mg	1/1/2000	Narcan®	naloxone hydrochloride injection	Indicated for the complete or partial reversal of opioid depression, including respiratory depression, induced by natural and synthetic opioids including: propoxyphene, methadone, nalbuphine, butorphanol and pentazocine; It is also indicated for the diagnosis of suspected opioid tolerance or acute opioid overdose.	N/A	N/A	N/A	N/A	Y	Y		10/26/2018
Drugs	J2311	Injection, naloxone hydrochloride (zimhi), 1 mg	1 mg	1/1/2023	Zimhi™	naloxone hydrochloride injection for intramuscular or subcutaneous use	Indicated in adult and pediatric patients for the emergency treatment of known or suspected opioid overdose, as manifested by respiratory and/or central nervous system depression.	50	N/A	N/A	N/A	Y	Y		12/6/2022
Drugs	J2315	Injection, naltrexone, depot form, 1 mg	1 mg	1/1/2007	Vivitrol®	naltrexone for extended-release injectable suspension, for intramuscular use	• Indicated for the treatment of alcohol dependence in patients who are able to abstain from alcohol in an outpatient setting prior to initiation of treatment with Vivitrol. Patients should not be actively drinking at the time of initial Vivitrol administration. • Indicated for the prevention of relapse to opioid dependence, following opioid detoxification. • Vivitrol should be part of a comprehensive management program that includes psychosocial support.	760	18 years	N/A	N/A	Y	Y	9/1/2023: Generic Name updated to align with Prescribing Information.	9/13/2023
Biologicals	J2323	Injection, natalizumab, 1 mg	1 mg	1/1/2008	Tysabri®	natalizumab injection, for intravenous use	Indicated for treatment of: Multiple Sclerosis (MS) • Tysabri is indicated as monotherapy for the treatment of patients with relapsing forms of multiple sclerosis. Tysabri increases the risk of PML. When initiating and continuing treatment with Tysabri, physicians should consider whether the expected benefit of Tysabri is sufficient to offset this risk. See important information regarding the risk of PML with Tysabri. Crohn's Disease (CD) • Tysabri is indicated for inducing and maintaining clinical response and remission in adult patients with moderately to severely active Crohn's disease with evidence of inflammation who have had an inadequate response to, or are unable to tolerate, conventional CD therapies and inhibitors of TNF-α. Important Limitations: • In CD, Tysabri should not be used in combination with immunosuppressants or inhibitors of TNF-α.	600	18 years	N/A	N/A	Y	Y		10/26/2018
Drugs	J2326	Injection, nusinersen, 0.1 mg	0.1 mg	1/1/2018	Spinraza®	nusinersen injection, for intrathecal use	Indicated for the treatment of spinal muscular atrophy (SMA) in pediatric and adult patients.	360	N/A	N/A	N/A	Y	Y		5/6/2021
Biologicals	J2327	Injection, risankizumab-rzaa, intravenous, 1 mg	1 mg	1/1/2023	Skyrizi®	risankizumab-rzaa injection, for intravenous use	Indicated for the treatment of: • moderately to severely active Crohn's disease in adults. • moderately to severely active ulcerative colitis (UC) in adults.	2,400	18 years	N/A	N/A	Y	Y		7/29/2024
Biologicals	J2329	Injection, ublituximab-xiiy, 1mg	1 mg	7/1/2023	Briumvi™	ublituximab-xiiy injection, for intravenous use	Indicated for the treatment of relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.	600	18 years	N/A	N/A	Y	Y		6/22/2023
Drugs	J2353	Injection, octreotide, depot form for intramuscular injection, 1 mg	1 mg	1/1/2004	Sandostatin® LAR Depot	octreotide acetate for injectable suspension	Indicated for treatment in patients who have responded to and tolerated sandostatin injection subcutaneous injection for: • Acromegaly • Severe diarrhea/flushing episodes associated with metastatic carcinoid tumors • Profuse watery diarrhea associated with VIP-secreting tumors	40	18 years	N/A	N/A	Y	Y		7/16/2018
Drugs	J2354	Injection, octreotide, non-depot form for subcutaneous or intravenous injection, 25 mcg	25 mcg	1/1/2004	Sandostatin®	octreotide acetate, injection	Indicated: • To reduce blood levels of growth hormone and IGF-I (somatomedin C) in acromegaly patients who have had inadequate response to or cannot be treated with surgical resection, pituitary irradiation, and bromocriptine mesylate at maximally tolerated doses. • For the symptomatic treatment of patients with metastatic carcinoid tumors where it suppresses or inhibits the severe diarrhea and flushing episodes associated with the disease. • For the treatment of the profuse watery diarrhea associated with VIP-secreting tumors. Sandostatin studies were not designed to show an effect on the size, rate of growth or development of metastases.	1,860	18 years	N/A	N/A	Y	Y		7/16/2018
Drugs	J2358	Injection, olanzapine, long-acting, 1 mg	1 mg	1/1/2011	Zyprexa® Relprevv™	olanzapine pamoate for extended release injectable suspension	Indicated for the treatment of schizophrenia.	900	18 years	N/A	N/A	Y	Y		9/21/2018
Drugs	J2359	Injection, olanzapine, 0.5 mg	0.5 mg	10/1/2023	Zyprexa® Intramuscular	olanzapine injection, powder, for solution	Indicated for the treatment of acute agitation associated with schizophrenia and bipolar I mania.	1,860	13 years	N/A	N/A	Y	Y		9/28/2023
Drugs	J2360	Injection, orphenadrine citrate, up to 60 mg	up to 60 mg	1/1/2000	Norflex®	orphenadrine citrate injection	Indicated as an adjunct to rest, physical therapy, and other measures for the relief of discomfort associated with acute painful musculoskeletal conditions.	20	18 years	N/A	N/A	Y	Y		7/16/2018

Drugs	J2469	Injection, palonosetron HCl, 25 mcg	25 mcg	1/1/2005	Aloxi®	palonosetron HCl injection for intravenous use	Indicated in adults for: • Moderately emetogenic cancer chemotherapy -- prevention of acute and delayed nausea and vomiting associated with initial and repeat courses. • Highly emetogenic cancer chemotherapy -- prevention of acute nausea and vomiting associated with initial and repeat courses. • Prevention of postoperative nausea and vomiting (PONV) for up to 24 hours following surgery. Efficacy beyond 24 hours has not been demonstrated. Indicated in pediatric patients aged 1 month to less than 17 years for: • Prevention of acute nausea and vomiting associated with initial and repeat courses of emetogenic cancer chemotherapy, including highly emetogenic cancer chemotherapy.	50	1 month	N/A	N/A	Y	Y		7/16/2018
Drugs	J2501	Injection, paricalcitol, 1 mcg	1 mcg	1/1/2003	Zemplar®	paricalcitol injection	Indicated for the prevention and treatment of secondary hyperparathyroidism associated with stage 5 chronic kidney disease (CKD).	420	18 years	N/A	N/A	Y	Y		7/16/2018
Drugs	J2502	Injection, pasireotide long acting, 1 mg	1 mg	1/1/2016	Signifor® LAR	pasireotide for injectable suspension, for intramuscular use	Indicated for the treatment of: • Patients with acromegaly who have had an inadequate response to surgery and/or for whom surgery is not an option. • Patients with Cushing's disease for whom pituitary surgery is not an option or has not been curative.	120	18 years	N/A	N/A	Y	Y		7/26/2018
Biologicals	J2506	Injection, pegfilgrastim, excludes biosimilar, 0.5 mg	0.5 mg	1/1/2022	Neulasta®, Neulasta® Onpro®	pegfilgrastim injection, for subcutaneous use	Indicated to: - To decrease the incidence of infection, as manifested by febrile neutropenia, in patients with nonmyeloid malignancies receiving myelosuppressive anticancer drugs associated with a clinically significant incidence of febrile neutropenia. - Increase survival in patients acutely exposed to myelosuppressive doses of radiation (Hematopoietic Subsyndrome of Acute Radiation Syndrome). Limitations of Use: - Neulasta is not indicated for the mobilization of peripheral blood progenitor cells for hematopoietic stem cell transplantation.	36	N/A	N/A	N/A	Y	Y		12/14/2021
Biologicals	J2507	Injection, pegloticase, 1 mg	1 mg	1/1/2012	Krystexxa®	pegloticase injection, for intravenous infusion	Indicated for the treatment of chronic gout in adult patients refractory to conventional therapy.	24	18 years	N/A	N/A	Y	Y		6/4/2019
Biologicals	J2508	Injection, pegunigalsidase alfa-iwxj, 1 mg	1 mg	1/1/2024	Elfabrio®	pegunigalsidase alfa-iwxj injection, for intravenous use	Indicated for the treatment of adults with confirmed Fabry disease.	420	18 years	N/A	N/A	Y	Y		12/22/2023
Drugs	J2510	Injection, penicillin G procaine, aqueous, up to 600,000 units	up to 600,000 units	1/1/2000	N/A	penicillin G procaine injectable suspension	Indicated in the treatment of moderately severe infections in both adults and pediatric patients due to penicillin-G-susceptible microorganisms that are susceptible to the low and persistent serum levels common to this particular dosage form. Therapy should be guided by bacteriological studies (including susceptibility tests) and by clinical response. See package insert for list of infections and microorganisms.	52	N/A	N/A	N/A	Y	Y		8/24/2018
Drugs	J2515	Injection, pentobarbital sodium, per 50 mg	50 mg	1/1/2000	Nembutal®	pentobarbital sodium injection, USP	Indicated for use as: • Sedatives • Hypnotics, for the short-term treatment of insomnia, since they appear to lose their effectiveness for sleep induction and sleep maintenance after 2 weeks • Preanesthetics • Anticonvulsant, in anesthetic doses, in the emergency control of certain acute convulsive episodes, e.g., those associated with status epilepticus, cholera, eclampsia, meningitis, tetanus, and toxic reactions to strychnine or local anesthetics	150	N/A	N/A	N/A	Y	Y		8/24/2018
Drugs	J2540	Injection, penicillin G potassium, up to 600,000 units	600,000 units	1/1/2000	Pfizerpen®	penicillin G potassium for injection	Indicated in the therapy of severe infections caused by penicillin G-susceptible microorganisms when rapid and high penicillin levels are required. Therapy should be guided by bacteriological studies (including susceptibility tests) and by clinical response. See package insert for full list of microorganisms.	1,240	N/A	N/A	N/A	Y	Y		8/24/2018
Drugs	J2543	Injection, piperacillin sodium/tazobactam sodium, 1 g/0.125 g (1.125 g)	1.125 g	1/1/2000	Zosyn®	piperacillin and tazobactam for injection, for intravenous use	Indicated for treatment of: • Intra-abdominal infections • Skin and skin structure infections • Female pelvic infections • Community-acquired pneumonia • Nosocomial pneumonia • Usage To reduce the development of drug-resistant bacteria and maintain the effectiveness of Zosyn and other antibacterial drugs, Zosyn should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria.	224	2 months	N/A	N/A	Y	Y		4/10/2019
Drugs	J2545	Pentamidine isethionate, inhalation solution, FDA-approved final product, non-compounded, administered through DME, unit dose form, per 300 mg	300 mg	1/1/2000	NebuPent®	pentamidine isethionate inhalant (DME) for oral inhalation only	Indicated for the prevention of Pneumocystis jiroveci pneumonia (PJP) in high-risk, HIV-infected patients defined by one or both of the following criteria: • a history of one or more episodes of PJP • a peripheral CD4+ (T4 helper/inducer) lymphocyte count less than or equal to 200/mm3	2	16 years	N/A	N/A	Y	Y		8/24/2018
Drugs	J2547	Injection, peramivir, 1 mg	1 mg	1/1/2016	Rapivab®	peramivir injection, for intravenous use	Indicated for the treatment of acute uncomplicated influenza in patients 6 months and older who have been symptomatic for no more than two days. Limitations of Use: • Efficacy based on clinical trials in which the predominant influenza virus type was influenza A; a limited number of subjects infected with influenza B virus were enrolled. • Consider available information on influenza drug susceptibility patterns and treatment effects when deciding whether to use. • Efficacy could not be established in patients with serious influenza requiring hospitalization.	600	6 months	N/A	N/A	Y	Y		2/25/2021

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Category	HCPCS Code	HCPCS Description	HCPCS Code Billing Unit	HCPCS Effective Date	Brand Name	Generic Name	FDA Approved Indications (See Package Insert for full FDA approved indication descriptions)	NC Suggested Max Monthly Units	Minimum Age	Maximum Age	Gender Restrictions	NDC Required	Rebating Labeler Required	Comments	Last Modified Date
Drugs	J2550	Injection, promethazine HCl, up to 50 mg	up to 50 mg	1/1/2000	Phenergan	promethazine hydrochloride injection	Indicated for the following conditions: • Amelioration of allergic reactions to blood or plasma. • In anaphylaxis as an adjunct to epinephrine and other standard measures after the acute symptoms have been controlled. • For other uncomplicated allergic conditions of the immediate type when oral therapy is impossible or contraindicated. • For sedation and relief of apprehension and to produce light sleep from which the patient can be easily aroused. • Active treatment of motion sickness. • Prevention and control of nausea and vomiting associated with certain types of anesthesia and surgery. • As an adjunct to analgesics for the control of postoperative pain. • Preoperative, postoperative, and obstetric (during labor) sedation. • Intravenously in special surgical situations, such as repeated bronchoscopy, ophthalmic surgery, and poor-risk patients, with reduced amounts of meperidine or other narcotic analgesic as an adjunct to anesthesia and analgesia.	93	2 years	N/A	N/A	Y	Y		8/24/2018
Drugs	J2560	Injection, phenobarbital sodium, up to 120 mg	up to 120 mg	1/1/2000	N/A	phenobarbital sodium injection	Indicated for use as: • Sedative. Sedation is obtainable within an hour, and in adequate dosage, the duration of action is more than six hours. Included in the more common conditions in which the sedative action of this class of drugs is desired are anxiety-tension states, hyperthyroidism, essential hypertension, nausea and vomiting of functional origin, motion sickness, acute labyrinthitis, pylorospasm in infants, chorea and cardiac failure. Phenobarbital is also a useful adjunct in treatment of hemorrhage from the respiratory or gastrointestinal tract. Phenobarbital controls anxiety, decreases muscular activity and lessens nervous excitability in hyperthyroid patients. However, thyrotoxic individuals occasionally react poorly to barbiturates. • Hypnotic, for the short-term treatment of insomnia, since it appears to lose its effectiveness for sleep induction and sleep maintenance after 2 weeks. • Preanesthetic. • Long-term anticonvulsant, (phenobarbital, mephobarbital and metharbital) for the treatment of generalized tonic-clonic and cortical focal seizures. And, in the emergency control of certain acute convulsive episodes, e.g., those associated with status epilepticus, cholera, eclampsia, cerebral hemorrhage, meningitis, tetanus, and toxic reactions to strychnine or local anesthetics. Phenobarbital sodium may be administered intramuscularly or intravenously as an anticonvulsant for emergency use. When administered intravenously, it may require 15 or more minutes before reaching peak concentrations in the brain. Therefore, injecting phenobarbital sodium until the convulsions stop may cause the brain level to exceed that required to control the convulsions and lead to severe barbiturate-induced depression. • Phenobarbital is indicated in pediatric patients as an anticonvulsant and as a sedative, including its preoperative and postoperative use.	N/A	N/A	N/A	N/A	Y	Y		8/29/2018
Drugs	J2562	Injection, plerixafor, 1 mg	1 mg	1/1/2010	Mozobil®	plerixafor injection, solution for subcutaneous use	Indicated in combination with granulocyte-colony stimulating factor (G-CSF) to mobilize hematopoietic stem cells (HSCs) to the peripheral blood for collection and subsequent autologous transplantation in patients with non-Hodgkin's lymphoma and multiple myeloma.	160	18 years	N/A	N/A	Y	Y		6/6/2019
Drugs	J2590	Injection, oxytocin, up to 10 units	up to 10 units	1/1/2000	Pitocin®	oxytocin injection, USP synthetic	Indicated for: • Antepartum - The initiation or improvement of uterine contractions, where there is desirable and considered suitable for reasons of fetal or maternal concern, in order to achieve vaginal delivery. - Induction of labor in patients with a medical indication for the initiation of labor. - Stimulation or reinforcement of labor, as in selected cases of uterine inertia. - Adjunctive therapy in the management of incomplete or inevitable abortion. • Postpartum - Produce uterine contractions during the third stage of labor and to control postpartum bleeding or hemorrhage.	12	N/A	N/A	Females Only	Y	Y		7/16/2018
Drugs	J2597	Injection, desmopressin acetate, per 1 mcg	1 mcg	1/1/2000	DDAVP®	desmopressin acetate injection	Indicated for patients with hemophilia A with factor VIII coagulant activity levels greater than 5%, patients with mild to moderate classic von Willebrand's disease (Type 1) with factor VIII levels greater than 5%, as an antidiuretic replacement therapy in the management of central (cranial) diabetes insipidus and for the management of the temporary polyuria and polydipsia following head trauma or surgery int he pituitary region. DDAVP is ineffective for the treatment of nephrogenic diabetes insipidus.	660	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication age specific: Hemophilia A and von Willebrand's Disease: 3 months of age and older Diabetes Insipidus: 12 years of age and older	7/2/2018
Drugs	J2675	Injection, progesterone, per 50 mg	per 50 mg	1/1/2003	N/A	progesterone injection, in sesame oil for intramuscular use only	Indicated in amenorrhea and abnormal uterine bleeding caused by hormonal imbalance in the absence of organic pathology, such as submucous fibroids or uterine cancer.	2	18 years	N/A	Females Only	Y	Y		6/6/2019
Drugs	J2679	Injection, fluphenazine hcl, 1.25 mg	1.25 mg	1/1/2024	N/A	fluphenazine hydrochloride injection, solution	Fluphenazine Hydrochloride Injection, USP is indicated in the management of manifestations of psychotic disorders. • Fluphenazine hydrochloride has not been shown effective in the management of behavioral complications in patients with mental retardation.	248	18 years	N/A	N/A	Y	Y		12/22/2023
Drugs	J2680	Injection, fluphenazine decanoate, up to 25 mg	up to 25 mg	1/1/2000	N/A	fluphenazine decanoate injection	Intended for use in the management of patients requiring prolonged parenteral neuroleptic therapy (e.g. chronic schizophrenics). Fluphenazine decanoate has not been shown effective in the management of behavioral complications in patients with mental retardation.	8	12 years	N/A	N/A	Y	Y		6/4/2019
Drugs	J2690	Injection, procainamide HCl, up to 1 g	up to 1 g	1/1/2000	N/A	procainamide hydrochloride injection, solution	Indicated for the treatment of documented ventricular arrhythmias, such as sustained ventricular tachycardia, that, in the judgement of the physician, are life-threatening. Because of the proarrhythmic effects of procainamide, its use with lesser arrhythmias is generally not recommended. Treatment of patients with asymptomatic ventricular premature contractions should be avoided.	7	18 years	N/A	N/A	Y	Y		6/6/2019

Drugs	J2794	Injection, risperidone (risperdal consta), 0.5 mg	0.5 mg	1/1/2005	Risperdal Consta®	risperidone long-acting injection	Indicated: • for the treatment of schizophrenia. • as monotherapy or as adjunctive therapy to lithium or valproate for the maintenance treatment of Bipolar I Disorder.	300	N/A	N/A	N/A	Y	Y		10/3/2019
Drugs	J2795	Injection, ropivacaine hydrochloride, 1 mg	1 mg	1/1/2001	Naropin®	ropivacaine HCl injection	Indicated for the production of local or regional anesthesia for surgery and for acute pain management. Surgical Anesthesia: epidural block for surgery including cesarean section; major nerve block; local infiltration. Acute pain management: epidural continuous infusion or intermittent bolus, eg, postoperative or labor; local infiltration.	2,166	18 years	N/A	N/A	Y	Y		8/29/2018
Drugs	J2796	Injection, romiplostim, 10 micrograms	10 mcg	1/1/2010	Nplate®	romiplostim for injection, for subcutaneous use	Indicated for the treatment of thrombocytopenia in: • Adult patients with immune thrombocytopenia (ITP) who have had an insufficient response to corticosteroids, immunoglobulins, or splenectomy. • Pediatric patients 1 year of age and older with ITP for at least 6 months who have had an insufficient response to corticosteroids, immunoglobulins, or splenectomy. Nplate is indicated to increase survival in adults and in pediatric patients (including term neonates) acutely exposed to myelosuppressive doses of radiation (Hematopoietic Syndrome of Acute Radiation Syndrome [HSARS]). Limitations of Use: • Nplate is not indicated for the treatment of thrombocytopenia due to myelodysplastic syndrome (MDS) or any cause of thrombocytopenia other than ITP. • Nplate should be used only in patients with ITP whose degree of thrombocytopenia and clinical condition increases the risk for bleeding. • Nplate should not be used in an attempt to normalize platelet counts.	700	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication Specific Age Restrictions: ITP: 1 year of age and older HS-ARS: None	2/25/2021
Drugs	J2798	Injection, risperidone, (perseris), 0.5 mg	0.5 mg	10/1/2019	Perseris™	risperidone for extended-release injectable suspension, for subcutaneous use	Indicated for the treatment of schizophrenia in adults.	480	18 years	N/A	N/A	Y	Y		10/3/2019

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Drugs	J3090	Injection, tedizolid phosphate, 1 mg	1 mg	1/1/2016	Sivextro®	tedizolid phosphate for injection, for intravenous use	Indicated in adults and pediatric patients 12 years of age and older for the treatment of acute bacterial skin and skin structure infections (ABSSSI) caused by designated susceptible bacteria.	1,200	12 years	N/A	N/A	Y	Y		7/28/2020
Drugs	J3095	Injection, telavancin, 10 mg	10 mg	1/1/2011	Vibativ®	telavancin for injection, for intravenous use	Indicated for the treatment of the following infections in adult patients caused by designated susceptible bacteria: • Complicated skin and skin structure infections (cSSSI) • Hospital-acquired and ventilator-associated bacterial pneumonia (HABP/VABP) caused by susceptible isolates of Staphylococcus aureus. Vibativ should be reserved for use when alternative treatments are not suitable.	3,150	18 years	N/A	N/A	Y	Y		6/8/2019
Drugs	J3105	Injection, terbutaline sulfate, up to 1 mg	up to 1 mg	1/1/2000	N/A	terbutaline sulfate injection, solution	Indicated for the prevention and reversal of bronchospasm in patients 12 years of age and older with asthma and reversible bronchospasm associated with bronchitis and emphysema.	45	12 years	N/A	N/A	Y	Y		9/12/2018
Biologicals	J3111	Injection, romosozumab-aqqg, 1 mg	1 mg	10/1/2019	Evenity™	romosozumab-aqqg injection, for subcutaneous use	Indicated for the treatment of osteoporosis in postmenopausal women at high risk for fracture, defined as a history of osteoporotic fracture, or multiple risk factors for fracture; or patients who have failed or are intolerant to other available osteoporosis therapy. Limitations of Use: Limit duration of use to 12 monthly doses. If osteoporosis therapy remains warranted, continued therapy with an anti-resorptive agent should be considered	420	Not for use in premenopausal women.	N/A	Females Only	Y	Y		10/3/2019
Drugs	J3121	Injection, testosterone enanthate, 1 mg	1 mg	1/1/2015	N/A	testosterone enanthate injection, solution	Indicated for replacement therapy in conditions associated with a deficiency or absence of endogenous testosterone including primary hypogonadism (congenital or acquired), hypogonadotropic hypogonadism (congenital or acquired), and delayed puberty. Testosterone Enanthate injection may be used secondarily in women with advancing inoperable metastatic (skeletal) mammary cancer who are 1 – 5 years postmenopausal.	1,200	N/A	N/A	N/A	Y	Y		9/12/2018
Drugs	J3145	Injection, testosterone undecanoate, 1mg	1 mg	1/1/2015	Aveed®	testosterone undecanoate injection for intramuscular use	Indicated for testosterone replacement therapy in adult males for conditions associated with a deficiency or absence of endogenous testosterone: primary hypogonadism (congenital or acquired) or hypogonadotropic hypogonadism (congenital or acquired). Limitations of Use: • Safety and efficacy of Aveed in men with "age-related hypogonadism" have not been established. • Safety and efficacy of Aveed in males less than 18 years old have not been established.	1,500	18 years	N/A	Males Only	Y	Y		9/21/2018
Drugs	J3230	Injection, chlorpromazine HCl, up to 50 mg	50 mg	1/1/2000	N/A	chlorpromazine hydrochloride injection	Indicated for the treatment of schizophrenia; to control nausea and vomiting; for relief of restlessness and apprehension before surgery; for acute intermittent porphyria; as an adjunct in the treatment of tetanus; to control the manifestations of the manic type of manic-depressive illness; for relief of intractable hiccups; for the treatment of severe behavioral problems in children (1 to 12 years of age) marked by combativeness and/or explosive hyperexcitable behavior (out of proportion to immediate provocations), and in the short-term treatment of hyperactive children who show excessive motor activity with accompanying conduct disorders consisting of some or all of the following symptoms: impulsivity, difficulty sustaining attention, aggressivity, mood lability, and poor frustration tolerance.	248	6 months	N/A	N/A	Y	Y		9/27/2018
Biologicals	J3240	Injection, thyrotropin alpha, 0.9 mg, provided in 1.1 mg vial	0.9 mg	1/1/2003	Thyrogen®	thyrotropin alfa for injection, for intramuscular use	Indicated for: • Diagnostic: Use as an adjunctive diagnostic tool for serum thyroglobulin (Tg) testing with or without radioiodine imaging in the follow-up of patients with well-differentiated thyroid cancer who have previously undergone thyroidectomy. • Ablation: Use as an adjunctive treatment for radioiodine ablation of thyroid tissue remnants in patients who have undergone a near-total or total thyroidectomy for well-differentiated thyroid cancer and who do not have evidence of distant metastatic thyroid cancer. Limitations of Use: • Diagnostic: - Thyrogen-stimulated Tg levels are generally lower than, and do not correlate with Tg levels after thyroid hormone withdrawal. - Even when Thyrogen-Tg testing is performed in combination with radioiodine imaging , there remains a risk of missing a diagnosis of thyroid cancer or underestimating the extent of the disease. - Anti-Tg Antibodies may confound the Tg assay and render Tg levels uninterpretable. •Ablation: - The effect of Thyrogen on long term thyroid cancer outcomes has not been determined.	2	18 years	N/A	N/A	Y	Y		6/19/2023
Biologicals	J3241	Injection, teprotumumab-trbw, 10 mg	10 mg	10/1/2020	Tepezza®	teprotumumab-trbw for injection, for intravenous use	Indicated for the treatment of Thyroid Eye Disease regardless of Thyroid Eye Disease activity or duration.	600	18 years	N/A	N/A	Y	Y		5/25/2023
Drugs	J3243	Injection, tigecycline, 1 mg	1 mg	1/1/2007	Tygacil®	tigecycline for injection, for intravenous use	Indicated in patients 18 years of age and older for: • Complicated skin and skin structure infections • Complicated intra-abdominal infections • Community-acquired bacterial pneumonia Limitations of Use: Tygacil is not indicated for treatment of diabetic foot infection or hospital-acquired pneumonia, including ventilator-associated pneumonia.	1,450	18 years	N/A	N/A	Y	Y		9/21/2018

Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Drugs	J3370	Injection, vancomycin HCl, 500 mg	500 mg	1/1/2000	N/A	vancomycin hydrochloride for injection, USP for intravenous use	Indicated for the treatment of serious or severe infections caused by susceptible strains of methicillin-resistant (ß-lactam-resistant) staphylococci. It is indicated for penicillin-allergic patients, for patients who cannot receive or who have failed to respond to other drugs, including the penicillins or cephalosporins, and for infections caused by vancomycin-susceptible organisms that are resistant to other antimicrobial drugs. Vancomycin hydrochloride for injection is indicated for initial therapy when methicillin-resistant staphylococci are suspected, but after susceptibility data are available, therapy should be adjusted accordingly. To reduce the development of drug-resistant bacteria and maintain the effectiveness of vancomycin hydrochloride for injection USP and other antibacterial drugs, vancomycin hydrochloride for injection should be used only to treat or prevent infections that are proven or strongly suspected to be caused by susceptible bacteria. When culture and susceptibility information are available, they should be considered in selecting or modifying antibacterial therapy. In the absence of such data, local epidemiology and susceptibility patterns may contribute to the empiric selection of therapy. See package insert for list of infections.	124	N/A	N/A	N/A	Y	Y		6/8/2019
Drugs	J3371	Injection, vancomycin hcl (mylan), not therapeutically equivalent to j3370, 500 mg	500 mg	1/1/2023	N/A	vancomycin hydrochloride for injection, for intravenous use (Mylan)	Indicated in adult and pediatric patients (neonates and older) for the treatment of: • Septicemia • Infective Endocarditis • Skin and Skin Structure Infections • Bone Infections • Lower Respiratory Tract Infections To reduce the development of drug-resistant bacteria and maintain the effectiveness of Vancomycin Hydrochloride for Injection and other antibacterial drugs, Vancomycin Hydrochloride for Injection should be used only to treat or prevent infections that are proven or strongly suspected to be caused by susceptible bacteria.	124	N/A	N/A	N/A	Y	Y		12/6/2022
Drugs	J3372	Injection, vancomycin hcl (xellia), not therapeutically equivalent to j3370, 500 mg	500 mg	1/1/2023	N/A	vancomycin injection, for intravenous use (Xellia)	Indicated in adult and pediatric patients less than 18 years of age as follows: • Vancomycin Injection administered intravenously is indicated for the treatment of: • Septicemia • Infective Endocarditis • Skin and Skin Structure Infections • Bone Infections • Lower Respiratory Tract Infections Limitations of Use: • Vancomycin Injection administered intravenously is not approved for the treatment of C. difficile-associated diarrhea and enterocolitis caused by susceptible isolates of Staphylococcus aureus because it is not effective. • Vancomycin Injection administered orally is not approved for the treatment of septicemia, infective endocarditis, skin and skin structure infections, bone infections and lower respiratory tract infections because it is not effective. To reduce the development of drug-resistant bacteria and maintain the effectiveness of Vancomycin Injection and other antibacterial drugs, Vancomycin Injection should be used only to treat or prevent infections that are proven or strongly suspected to be caused by susceptible bacteria.	124	N/A	N/A	N/A	Y	Y		12/6/2022

Drugs	J3410	Injection, hydroxyzine HCl, up to 25 mg	up to 25 mg	1/1/2000	Vistaril®	hydroxyzine hydrochloride injection for intramuscular use	• The total management of anxiety, tension, and psychomotor agitation in conditions of emotional stress requires in most instances a combined approach of psychotherapy and chemotherapy. Hydroxyzine has been found to be particularly useful for this latter phase of therapy in its ability to render the disturbed patient more amenable to psychotherapy in long term treatment of the psychoneurotic and psychotic, although it should not be used as the sole treatment of psychosis or of clearly demonstrated cases of depression. • Also useful in alleviating the manifestations of anxiety and tension as in the preparation for dental procedures and in acute emotional problems. It has also been recommended for the management of anxiety associated with organic disturbances and as adjunctive therapy in alcoholism and allergic conditions with strong emotional overlay, such as in asthma, chronic urticaria, and pruritus. • Hydroxyzine hydrochloride intramuscular solution is useful in treating the following types of patients when intramuscular administration is indicated: --The acutely disturbed or hysterical patient. --The acute or chronic alcoholic with anxiety withdrawal symptoms or delirium tremens. --As pre-and postoperative and pre- and postpartum adjunctive medication to permit reduction in narcotic dosage, allay anxiety and control emesis. • Hydroxyzine hydrochloride has also demonstrated effectiveness in controlling nausea and vomiting, excluding nausea and vomiting of pregnancy. • Hydroxyzine benefits the cardiac patient by its ability to allay the associated anxiety and apprehension attendant to certain types of heart disease. Hydroxyzine is not known to interfere with the action of digitalis in any way and may be used concurrently with this agent.	240	N/A	N/A	N/A	Y	Y		10/26/2018
Drugs	J3420	Injection, vitamin B-12 cyanocobalamin, up to 1,000 mcg	up to 1,000 mcg	1/1/2000	N/A	cyanocobalamin injection, USP (vitamin B-12)	Indicated for vitamin B12 deficiencies due to malabsorption which may be associated with the following conditions: • Addisonian (pernicious) anemia • Gastrointestinal pathology, dysfunction, or surgery, including gluten enteropathy or sprue, small bowel bacteria overgrowth, total or partial gastrectomy • Fish tapeworm infestation • Malignancy of pancreas or bowel • Folic acid deficiency Cyanocobalamin injection is also suitable for the vitamin B12 absorption test (Schilling test).	10	N/A	N/A	N/A	Y	Y		9/27/2018
Drugs	J3430	Injection, phytonadione (vitamin K) per 1 mg	1 mg	1/1/2000	Mephyton®	phytonadione injectable emulsion, USP	Indicated in the following coagulation disorders which are due to faulty formation of factors II, VII, IX and X when caused by vitamin K deficiency or interference with vitamin K activity: • anticoagulant-induced prothrombin deficiency caused by coumarin or indanedione derivatives; • prophylaxis and therapy of hemorrhagic disease of the newborn; • hypoprothrombinemia due to antibacterial therapy; • hypoprothrombinemia secondary to factors limiting absorption or synthesis of vitamin K, e.g., obstructive jaundice, biliary fistula, sprue, ulcerative colitis, celiac disease, intestinal resection, cystic fibrosis of the pancreas, and regional enteritis; • other drug-induced hypoprothrombinemia where it is definitely shown that the result is due to interference with vitamin K metabolism, e.g., salicylates.	50	N/A	N/A	N/A	Y	Y		6/5/2019
Biologicals	J3470	Injection, hyaluronidase, up to 150 units	up to 150 units	1/1/2000	Amphadase®	hyaluronidase injection	Indicated as an adjuvant: • In subcutaneous fluid administration for achieving hydration. • To increase absorption and dispersion of other injected drugs. • In subcutaneous urography for improving resorption of radiopaque agents.	93	N/A	N/A	N/A	Y	Y		6/19/2023

Drugs	J3490	Unclassified drugs	1 mg	1/1/2000	Cleviprex®	clevidipine injectable emulsion, for intravenous use	Indicated for the reduction of blood pressure when oral therapy is not feasible or not desirable.	1,500	18 years	N/A	N/A	Y	Y		10/4/2018
Drugs	J3490	Unclassified drugs	1 mL	1/1/2000	Defitelio®	defibrotide sodium injection, for intravenous use	Indicated for the treatment of adult and pediatric patients with hepatic veno-occlusive disease (VOD), also known as sinusoidal obstruction syndrome (SOS), with renal or pulmonary dysfunction following hematopoietic stem-cell transplantation (HSCT).	1,395	18 years	N/A	N/A	Y	Y		6/10/2019
Drugs	J3490	Unclassified drugs	1 mg	1/1/2000	Depacon®	valproate sodium, for intravenous injection	Indicated as an intravenous alternative in patients in whom oral administration of valproate products is temporarily not feasible in the following conditions: • Monotherapy and adjunctive therapy of complex partial seizures and simple and complex absence seizures; adjunctive therapy in patients with multiple seizure types that include absence seizures.	119,000	2 years	N/A	N/A	Y	Y		5/30/2019
Drugs	J3490	Unclassified drugs	1 mg lidocaine USP base	1/1/2000	Lidocaine (various topical formulations)	lidocaine (various topical formulations)	Indicated for production of anesthesia of accessible mucous membranes of the oropharynx. It is also useful as an anesthetic lubricant for intubation and for the temporary relief of pain associated with minor burns, including sunburn, abrasions of the skin, and insect bites.	31,000	N/A	N/A	N/A	Y	Y		10/26/2018
Drugs	J3490	Unclassified drugs	1 mg	1/1/2000	N/A	nalmefene hydrochloride injection	Indicated: - for the complete or partial reversal of opioid drug effects, including respiratory depression, induced by either natural or synthetic opioids - in the management of known or suspected opioid overdose	20	18 years	N/A	N/A	Y	Y	12/2023: Due to NDA product Revex no longer being marketed, recommended dosing updated to align with ANDA product Prescribing Information and brand name Revex updated to N/A effective 6/22/2022.	1/26/2024

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Drugs	J3490	Unclassified drugs	50 mL	1/1/2000	N/A	sodium bicarbonate injection, solution	Indicated in: • The treatment of metabolic acidosis which may occur in severe renal disease, uncontrolled diabetes, circulatory insufficiency due to shock or severe dehydration, extracorporeal circulation of blood, cardiac arrest and severe primary lactic acidosis. • The treatment of certain drug intoxications, including barbiturates (where dissociation of the barbiturate-protein complex is desired), in poisoning by salicylates or methyl alcohol and in hemolytic reactions requiring alkalinization of the urine to diminish nephrotoxicity of blood pigments. • Severe diarrhea which is often accompanied by a significant loss of bicarbonate. • Treatment of metabolic acidosis should, if possible, be superimposed on measures designed to control the basic cause of the acidosis — e.g., insulin in uncomplicated diabetes, blood volume restoration in shock. But since an appreciable time interval may elapse before all of the ancillary effects are brought about, bicarbonate therapy is indicated to minimize risks inherent to the acidosis itself. • Vigorous bicarbonate therapy is required in any form of metabolic acidosis where a rapid increase in plasma total CO content is crucial — e.g., cardiac arrest, circulatory insufficiency due to shock or severe dehydration, and in severe primary lactic acidosis or severe diabetic acidosis.	403	N/A	N/A	N/A	Y	Y		10/31/2018
Drugs	J3490	Unclassified drugs	1 mg	1/1/2000	Noxafil®	posaconazole injection, for intravenous use	Indicated for the prophylaxis of invasive Aspergillus and Candida infections in patients who are at high risk of developing these infections due to being severely immunocompromised, such as HSCT recipients with GVHD or those with hematologic malignancies with prolonged neutropenia from chemotherapy. Indicated for the treatment of invasive aspergillosis in adults and pediatric patients 13 years of age and older.	9,600	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: Prophylaxis of invasive Aspergillus and Candida infections: 2 years of age and older Treatment of invasive aspergillosis: 13 years of age and older	7/27/2021
Drugs	J3490	Unclassified drugs	1 mg	1/1/2000	Opvee®	nalmefene nasal spray	Indicated for the emergency treatment of known or suspected overdose induced by natural or synthetic opioids in adults and pediatric patients aged 12 years and older, as manifested by respiratory and/or central nervous system depression.	27	12 years	N/A	N/A	Y	Y		10/26/2023
Drugs	J3490	Unclassified drugs	1 vial	1/1/2000	Prevymis®	letermovir injection, for intravenous use	Indicated for: - prophylaxis of cytomegalovirus (CMV) infection and disease in adult CMV-seropositive recipients [R+] of an allogeneic hematopoietic stem cell transplant (HSCT). - prophylaxis of CMV disease in adult kidney transplant recipients at high risk (Donor CMV seropositive/Recipient CMV seronegative [D+/R-]).	31	18 years	N/A	N/A	Y	Y		7/26/2023
Drugs	J3490	Unclassified drugs	1 mL	1/1/2000	Provayblue®	methylene blue injection, for intravenous use	Indicated for the treatment of pediatric and adult patients with acquired methemoglobinemia. This indication is approved under accelerated approval. Continued approval for this indication may be contingent upon verification of clinical benefit in subsequent trials.	60	N/A	N/A	N/A	Y	Y		3/17/2022
Drugs	J3490	Unclassified drugs	10 mg	1/1/2000	Revatio®	sildenafil injection, for intravenous use	Indicated for the treatment of pulmonary arterial hypertension (PAH) (WHO Group I) in adults to improve exercise ability and delay clinical worsening. Studies establishing effectiveness were short-term (12 to 16 weeks), and included predominately patients with NYHA Functional Class II-III symptoms. Etiologies were idiopathic (71%) or associated with connective tissue disease (25%). Limitation of Use: Adding sildenafil to bosentan therapy does not result in any beneficial effect on exercise capacity.	93	3 years	N/A	N/A	Y	Y		3/17/2022
Drugs	J3490	Unclassified drugs	1 mg	1/1/2000	Rezipres®	ephedrine hydrochloride injection, for intravenous use	Indicated for the treatment of clinically important hypotension occurring in the setting of anesthesia.	1,457	18 years	N/A	N/A	Y	Y		4/17/2022
Drugs	J3490	Unclassified drugs	1 mcg	1/1/2000	Uptravi®	selexipag for injection, for intravenous use	Indicated for the treatment of pulmonary arterial hypertension (PAH, WHO Group I) to delay disease progression and reduce the risk of hospitalization for PAH. Note: Use Uptravi for injection in patients who are temporarily unable to take oral therapy.	111,600	18 years	N/A	N/A	Y	Y		9/28/2021
Drugs	J3490	Unclassified drugs	10 mg	1/1/2000	Vimpat®	lacosamide injection, for intravenous use	Vimpat is indicated for: • Treatment of partial-onset seizures in patients 1 month of age and older. • Adjunctive therapy in the treatment of primary generalized tonic-clonic seizures in patients 4 years of age and older.	1,240	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: Partial-onset seizures: 1 month of age and older Primary generalized tonic-clonic seizures: 4 years of age and older	11/17/2021
Drugs	J3490	Unclassified drugs	0.6 mg	1/1/2000	Zegalogue®	dasiglucagon injection, for subcutaneous use	Indicated for the treatment of severe hypoglycemia in pediatric and adult patients with diabetes aged 6 years and above.	10	6 years	N/A	N/A	Y	Y		7/27/2021
Drugs	J3490	Unclassified drugs	1 mg	1/1/2000	Wainua™	eplontersen injection, for subcutaneous use	Eplontersen injection is indicated for the treatment of the polyneuropathy of hereditary transthyretin-mediated amyloidosis in adults.	45	18 years	N/A	N/A	Y	Y		3/25/2024
Biologicals	J3590	Unclassified biologics	11 mg (1 kit)	1/1/2002	Cablivi®	caplacizumab-yhdp for injection, for intravenous or subcutaneous use	Indicated for the treatment of adult patients with acquired thrombotic thrombocytopenic purpura (aTTP), in combination with plasma exchange and immunosuppressive therapy.	32	18 years	N/A	N/A	Y	Y		3/26/2019
Biologicals	J3590	Unclassified biologics	per daily dose	1/1/2002	Palforzia™	peanut (Arachis hypogaea) allergen powder-dnfp powder for oral administration	Indicated for the mitigation of allergic reactions, including anaphylaxis, that may occur with accidental exposure to peanut. Limitation of Use: Not indicated for the emergency treatment of allergic reactions, including anaphylaxis.	31	4 years	N/A	N/A	Y	Y	Initial Dose Escalation may be administered to patients aged 4 through 17 years. Up-Dosing and Maintenance may be continued in patients 4 years of age and older.	4/29/2020
Biologicals	J3590	Unclassified biologics	0.5 mL	1/1/2002	Plegridy™	peginterferon beta-1a injection, for subcutaneous or intramuscular use	Indicated for the treatment of patients with relapsing forms of multiple sclerosis.	3	18 years	N/A	N/A	Y	Y		2/25/2021

Biologicals	J7190	Factor VIII (antihemophilic factor [human]) per IU	1 IU	1/1/2000	Hemofil® M, Koate®-DVI, Monoclate-P®	factor VIII (antihemophilic factor, human) for intravenous injection	Koate: Indicated for the control and prevention of bleeding episodes or in order to perform emergency and elective surgery in patients with hemophilia A (hereditary Factor VIII deficiency). Limitation of Use: Koate is not indicated for the treatment of von Willebrand disease. Monoclate-P: Indicated for treatment of classical hemophilia (Hemophilia A). Affected individuals frequently require therapy following minor accidents. Surgery, when required in such individuals, must be preceded by temporary corrections of the clotting abnormality. Surgical prophylaxis in severe AHF deficiency can be accomplished with an appropriately-dosed pre-surgical IV bolus of Monoclate-P followed by intermittent maintenance doses. Monoclate P is not effective in controlling the bleeding of patients with von Willebrand disease. Hemofil M: Indicated in hemophilia A (classical hemophilia) for the prevention and control of hemorrhagic episodes. Hemofil M is not indicated in von Willebrand disease.	24,000	N/A	N/A	N/A	Y	Y		10/10/2018
Biologicals	J7192	Factor VIII (antihemophilic factor, recombinant) per IU, not otherwise specified	1 IU	1/1/2000	Advate®, Bioclate®, Helixate® FS, Kogenate® FS, Recombinate™, ReFacto®	factor VIII (antihemophilic factor, recombinant) for intravenous use	Kogenate: Indicated for: • On-demand treatment and control of bleeding episodes in adults and children with hemophilia A. • Perioperative management of bleeding in adults and children with hemophilia A. • Routine prophylaxis to reduce the frequency of bleeding episodes in children with hemophilia A and to reduce the risk of joint damage in children without pre-existing joint damage. • Routine prophylaxis to reduce the frequency of bleeding episodes in adults with hemophilia A. Kogenate is not indicated for the treatment of von Willebrand disease. Advate: Indicated for use in children and adults with hemophilia A for: • Control and prevention of bleeding episodes. • Perioperative management. • Routine prophylaxis to prevent or reduce the frequency of bleeding episodes. Advate is not indicated for the treatment of von Willebrand disease. Recombinate: Indicated in hemophilia A: • For the prevention and control of hemorrhagic episodes. • Perioperative management. Recombinate is not indicated in von Willebrand's disease.	54,000	N/A	N/A	N/A	Y	Y		10/10/2018
Biologicals	J7193	Factor IX (antihemophilic factor, purified, non-recombinant) per IU	1 IU	1/1/2002	AlphaNine® SD, Mononine®	coagulation factor IX (human)	Indicated for the prevention and control of bleeding episodes in patients with Factor IX deficiency (hemophilia B, Christmas disease).	42,000	N/A	N/A	N/A	Y	Y		10/10/2018
Biologicals	J7194	Factor IX, complex, per IU	per IU	1/1/2000	Bebulin® VH, Profilnine® SD, Profilnine®	factor IX complex for intravenous administration	Bebulin: Indicated for the prevention and control of bleeding episodes in adult patients with hemophilia B (congenital Factor IX deficiency or Christmas disease). Bebulin is not indicated for use in the treatment of Factor VII deficiency. No clinical studies have been conducted to show benefit from this product for treating deficiencies other than Factor IX deficiency. Profilnine: Indicated for the prevention and control of bleeding in patients with factor IX deficiency (hemophilia B). Profilnine contains non-therapeutic levels of factor VII and is not indicated for use in the treatment of factor VII deficiency.	59,500	18 years	N/A	N/A	Y	Y		10/26/2018
Biologicals	J7195	Injection factor IX (antihemophilic factor, recombinant) per IU, not otherwise specified	1 IU	1/1/2002	BeneFIX®	coagulation factor IX (recombinant) for intravenous use	Indicated for: • Control and prevention of bleeding episodes in adult and pediatric patients with hemophilia B. • Peri-operative management in adult and pediatric patients with hemophilia B. Limitations of Use: Benefix is not indicated for the treatment of other factor deficiencies (e.g. factors II, VII, VIII, and X), hemophilia A patients with inhibitors to factor VIII, reversal of coumarin-induced anticoagulation, and bleeding due to low levels of liver-dependent coagulation factors.	42,000	N/A	N/A	N/A	Y	Y		10/10/2018
Biologicals	J7196	Injection, antithrombin recombinant, 50 IU	50 IU	1/1/2011	ATryn®	antithrombin (recombinant) lyophilized powder for reconstitution	Indicated for the prevention of peri-operative and peri-partum thromboembolic events in hereditary antithrombin deficient patients.	1,100	18 years	N/A	N/A	Y	Y		9/25/2018
Biologicals	J7197	Antithrombin III (human), per IU	1 IU	1/1/2000	Thrombate III®	antithrombin III (human) lyophilized powder for solution for intravenous injection	Indicated in patients with hereditary antithrombin deficiency for: • Treatment and prevention of thromboembolism • Prevention of peri-operative and peri-partum thromboembolism	40,000	18 years	N/A	N/A	Y	Y		9/25/2018
Biologicals	J7198	Anti-inhibitor, per IU	per IU	1/1/2000	Feiba	anti-inhibitor coagulant complex, for intravenous use, lyophilized powder for solution	Indicated for use in hemophilia A and B patients with inhibitors for: • Control and prevention of bleeding episodes • Perioperative management • Routine prophylaxis to prevent or reduce the frequency of bleeding episodes. Feiba is not indicated for the treatment of bleeding episodes resulting from coagulation factor deficiencies in the absence of inhibitors to factor VIII or factor IX.	560,000	N/A	N/A	N/A	Y	Y		9/21/2018
Biologicals	J7200	Injection, factor IX, (antihemophilic factor, recombinant), Rixubis, per IU	1 IU	1/1/2015	Rixubis®	coagulation factor IX (recombinant) for intravenous injection	Indicated in adults and children with hemophilia B for control and prevention of bleeding episodes, perioperative management, and routine prophylaxis. Rixubis is not indicated for induction of immune tolerance in patients with Hemophilia B.	60,300	N/A	N/A	N/A	Y	Y		10/10/2018

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Recommended Uses from the National Heart, Lung, and Blood Institute: Asthma exacerbations for children through 12 years of age and adults.	186	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication Specific Age Restrictions: Treatment of bronchospasm associated with COPD: 18 years of age and older Asthma exacerbations: N/A	9/21/2022
Drugs	J7644	Ipratropium bromide, inhalation solution, FDA-approved final product, non-compounded, administered through DME, unit dose form, per milligram	1 mg	1/1/2000	N/A	ipratropium bromide inhalation solution, 0.02%	FDA Approved Indication: Indicated as a bronchodilator for maintenance treatment of bronchospasm associated with chronic obstructive pulmonary disease, including chronic bronchitis and emphysema. Recommended Uses from the National Heart, Lung, and Blood Institute: Asthma exacerbations for children through 12 years of age and adults.	93	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication Specific Age Restrictions: Maintenance treatment of bronchospasm associated with chronic obstructive pulmonary disease: 18 years of age and older Asthma exacerbations: N/A	9/23/2022
Drugs	J8499	Prescription drug, oral, non-chemotherapeutic, Not Otherwise Specified	2 grams	1/1/2000	Flagyl®, Likmez™	metronidazole, oral	Approved indications for use in the PADP: • Symptomatic Trichomoniasis: Metronidazole is indicated for the treatment of *T. vaginalis* infection in females and males when the presence of the trichomonad has been confirmed by appropriate laboratory procedures (wet smears and/or cultures). • Asymptomatic Trichomoniasis: Metronidazole is indicated in the treatment of asymptomatic *T. vaginalis* infection in females when the organism is associated with endocervicitis, cervicitis, or cervical erosion. Since there is evidence that presence of the trichomonad can interfere with accurate assessment of abnormal cytological smears, additional smears should be performed after eradication of the parasite. • Treatment of Asymptomatic Sexual Partners: *T. vaginalis* infection is a venereal disease. Therefore, asymptomatic sexual partners of treated patients should be treated simultaneously if the organism has been found to be present, in order to prevent reinfection of the partner. The decision as to whether to treat an asymptomatic male partner who has a negative culture or one for whom no culture has been attempted is an individual one. In making this decision, it should be noted that there is evidence that a woman may become reinfected if her sexual partner is not treated. Also, since there can be considerable difficulty in isolating the organism from the asymptomatic male carrier, negative smears and cultures cannot be relied upon in this regard. In any event, the sexual partner should be treated with Metronidazole in cases of reinfection.	2	N/A	N/A	N/A	Y	Y		12/1/2023
Drugs	J9000	Injection, doxorubicin hydrochloride, 10 mg	10 mg	1/1/2000	Adriamycin®	doxorubicin hydrochloride for injection, for intravenous use	Indicated: • As a component of multiagent adjuvant chemotherapy for treatment of women with axillary lymph node involvement following resection of primary breast cancer. • For the treatment of: acute lymphoblastic leukemia, acute myeloblastic leukemia, Hodgkin lymphoma, Non-Hodgkin lymphoma, metastatic breast cancer, metastatic Wilms' tumor, metastatic neuroblastoma, metastatic soft tissue sarcoma, metastatic bone sarcomas, metastatic ovarian carcinoma, metastatic transitional cell bladder carcinoma, metastatic thyroid carcinoma, metastatic gastric carcinoma, metastatic bronchogenic carcinoma.	38	N/A	N/A	N/A	Y	Y		4/10/2019
Drugs	J9015	Injection, aldesleukin, per single-use via	per single use vial	1/1/2000	Proleukin®	aldesleukin for injection, for intravenous infusion	Indicated for the treatment of adults with metastatic renal cell carcinoma and metastatic melanoma.	112	18 years	N/A	N/A	Y	Y		6/6/2019
Drugs	J9017	Injection, arsenic trioxide, 1 mg	1 mg	1/1/2000	Trisenox®	arsenic trioxide injection, for intravenous use	• Indicated for induction of remission and consolidation in patients with acute promyelocytic leukemia (APL) who are refractory to, or have relapsed from, retinoid and anthracycline chemotherapy, and whose APL is characterized by the presence of the t(15;17) translocation or PML/RAR-alpha gene expression. • Indicated in combination with tretinoin for treatment of adults with newly-diagnosed low-risk acute promyelocytic leukemia (APL) whose APL is characterized by the presence of the t(15;17) translocation or PML/RAR-alpha gene expression.	651	Indication Specific Age Restrictions (see comments)	N/A	N/A	Y	Y	Indication specific age restrictions: • In combination with tretinoin: 18 years of age and older • As a single agent: 5 years of age and older	9/25/2018

Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Biologicals	J9055	Injection, cetuximab, 10 mg	10 mg	1/1/2005	Erbitux®	cetuximab injection, for intravenous use	Indicated for: • Squamous Cell Carcinoma of the Head and Neck (SCCHN): - Locally or regionally advanced squamous cell carcinoma of the head and neck in combination with radiation therapy. - Recurrent locoregional disease or metastatic squamous cell carcinoma of the head and neck in combination with platinum-based therapy with fluorouracil. - Recurrent or metastatic squamous cell carcinoma of the head and neck progressing after platinum-based therapy. • K-Ras Wild-type, EGFR-expressing Colorectal Cancer (CRC) as determined by an FDA-approved test: - In combination with Folfiri for first-line treatment, - In combination with irinotecan in patients who are refractory to irinotecan-based chemotherapy, - As a single agent in patients who have failed oxaliplatin- and irinotecan-based chemotherapy or who are intolerant to irinotecan. Limitations of Use: Erbitux is not indicated for treatment of Ras-mutant colorectal cancer or when the results of the Ras mutation tests are unknown. • BRAF V600E Mutation-Positive Metastatic Colorectal Cancer (CRC) - in combination with encorafenib, for the treatment of adult patients with metastatic colorectal cancer (CRC) with a BRAF V600E mutation, as detected by an FDA-approved test, after prior therapy.	390	18 years	N/A	N/A	Y	Y		10/26/2021
Drugs	J9056	Injection, bendamustine hydrochloride (vivimusta), 1 mg	1 mg	7/1/2023	Vivimusta	bendamustine hydrochloride injection, for intravenous use	Indicated for treatment of patients with: • Chronic lymphocytic leukemia (CLL). Efficacy relative to first line therapies other than chlorambucil has not been established. • Indolent B-cell non-Hodgkin lymphoma (NHL) that has progressed during or within six months of treatment with rituximab or a rituximab-containing regimen.	1,200	18 years	N/A	N/A	Y	Y		6/22/2023
Drugs	J9057	Injection, copanlisib, 1 mg	1 mg	1/1/2019	Aliqopa™	copanlisib injection, for intravenous use	Indicated for the treatment of adult patients with relapsed follicular lymphoma (FL) who have received at least two prior systemic therapies. Accelerated approval was granted for this indication based on overall response rate. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial.	240	18 years	N/A	N/A	Y	Y		8/5/2021
Drugs	J9058	Injection, bendamustine hydrochloride (apotex), 1 mg	1 mg	7/1/2023	N/A	bendamustine hydrochloride injection, for intravenous use (Apotex)	Indicated for treatment of adult patients with: • Indolent B-cell non-Hodgkin lymphoma (NHL) that has progressed during or within six months of treatment with rituximab or a rituximab-containing regimen.	1,440	18 years	N/A	N/A	Y	Y		5/23/2024

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Drugs	J9059	Injection, bendamustine hydrochloride (baxter), 1 mg	1 mg	7/1/2023	N/A	bendamustine hydrochloride injection, for intravenous use (Baxter)	Indicated for treatment of adult patients with: • Chronic lymphocytic leukemia (CLL). Efficacy relative to first line therapies other than chlorambucil has not been established. • Indolent B-cell non-Hodgkin lymphoma (NHL) that has progressed during or within six months of treatment with rituximab or a rituximab-containing regimen.	1,200	18 years	N/A	N/A	Y	Y		6/22/2023
Drugs	J9060	Injection, cisplatin, powder or solution, per 10 mg	10 mg	1/1/2000	N/A	cisplatin injection	Indicated as therapy for: • Metastatic Testicular Tumors: In established combination therapy with other approved chemotherapeutic agents in patients with metastatic testicular tumors who have already received appropriate surgical and/or radiotherapeutic procedures. • Metastatic Ovarian Tumors: In established combination therapy with other approved chemotherapeutic agents in patients with metastatic ovarian tumors who have already received appropriate surgical and/or radiotherapeutic procedures. An established combination consists of cisplatin and cyclophosphamide. Cisplatin Injection, as a single agent, is indicated as secondary therapy in patients with metastatic ovarian tumors refractory to standard chemotherapy who have not previously received Cisplatin Injection therapy. • Advanced Bladder Cancer: Indicated as a single agent for patients with transitional cell bladder cancer which is no longer amenable to local treatments, such as surgery and/or radiotherapy.	50	18 years	N/A	N/A	Y	Y		9/27/2018
Biologicals	J9061	Injection, amivantamab-vmjw, 2 mg	2 mg	1/1/2022	Rybrevant™	amivantamab-vmjw injection, for intravenous use	Indicated: - as a single agent for the treatment of adult patients with locally advanced or metastatic non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR) exon 20 insertion mutations, as detected by an FDA-approved test, whose disease has progressed on or after platinum-based chemotherapy. - in combination with carboplatin and pemetrexed for the first-line treatment of adult patients with locally advanced or metastatic non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR) exon 20 insertion mutations, as detected by an FDA-approved test.	2,800	18 years	N/A	N/A	Y	Y		5/3/2024
Biologicals	J9063	Injection, mirvetuximab soravtansine-gynx, 1 mg	1 mg	7/1/2023	Elahere™	mirvetuximab soravtansine-gynx injection, for intravenous use	Indicated for the treatment of adult patients with FRα positive, platinum-resistant epithelial ovarian, fallopian tube, or primary peritoneal cancer, who have received one to three prior systemic treatment regimens. Select patients for therapy based on an FDA-approved test.	1,800	18 years	N/A	N/A	Y	Y		6/22/2023
Drugs	J9065	Injection, cladribine, per 1 mg	1 mg	1/1/2000	N/A	cladribine injection	Indicated for the treatment of active Hairy Cell Leukemia as defined by clinically significant anemia, neutropenia, thrombocytopenia, or disease-related symptoms.	91	18 years	N/A	N/A	Y	Y		6/4/2019
Drugs	J9071	Injection, cyclophosphamide (auromedics), 5 mg	5 mg	4/1/2022	N/A	cyclophosphamide for injection, for intravenous use (AuroMedics)	Indicated for the treatment of: Malignant Diseases: malignant lymphomas, Hodgkin's disease, lymphocytic lymphoma, mixed-cell type lymphoma, histiocytic lymphoma, Burkitt's lymphoma; multiple myeloma, leukemias, mycosis fungoides, neuroblastoma, adenocarcinoma of ovary, retinoblastoma, breast carcinoma.	2,500	N/A	N/A	N/A	Y	Y		3/17/2022
Drugs	J9072	Injection, cyclophosphamide (dr. reddy's), 5 mg	5 mg	1/1/2024	N/A	cyclophosphamide injection, for intravenous use (Dr. Reddy's)	Cyclophosphamide injection is indicated for treatment of adult and pediatric patients with: • Malignant Diseases: - malignant lymphomas: Hodgkin's disease, lymphocytic lymphoma, mixed-cell type lymphoma, histiocytic lymphoma, Burkitt's lymphoma; - multiple myeloma, leukemias, mycosis fungoides, neuroblastoma, adenocarcinoma of ovary, retinoblastoma, breast carcinoma. Limitations of Use: The safety and effectiveness for the treatment of nephrotic syndrome in adults or other renal disease has not been established.	2,500	N/A	N/A	N/A	Y	Y		12/22/2023
Drugs	J9073	Injection, cyclophosphamide (ingenus), 5 mg	5 mg	4/1/2024	N/A	cyclophosphamide injection, for intravenous use (Ingenus)	Cyclophosphamide is indicated for treatment of: • Malignant Diseases: malignant lymphomas: Hodgkin's disease, lymphocytic lymphoma, mixed-cell type lymphoma, histiocytic lymphoma, Burkitt's lymphoma; multiple myeloma, leukemias, mycosis fungoides, neuroblastoma, adenocarcinoma of ovary, retinoblastoma, breast carcinoma.	2,100	N/A	N/A	N/A	Y	Y		3/27/2024
Drugs	J9074	Injection, cyclophosphamide (sandoz), 5 mg	5 mg	4/1/2024	N/A	cyclophosphamide injection, for intravenous use (Sandoz)	Cyclophosphamide Injection is an alkylating drug indicated for treatment of adult patients with: Malignant Diseases: malignant lymphomas: Hodgkin's lymphoma, lymphocytic lymphoma, mixed-cell type lymphoma, histiocytic lymphoma, Burkitt's lymphoma; multiple myeloma, leukemias, mycosis fungoides, neuroblastoma, adenocarcinoma of ovary, retinoblastoma, breast carcinoma. Limitations of Use: This cyclophosphamide product is not indicated for use in pediatric patients due to the alcohol and propylene glycol content in this product. If treatment with cyclophosphamide is indicated in a pediatric patient, use a different cyclophosphamide product.	2,100	18 years	N/A	N/A	Y	Y		5/3/2024
Drugs	J9075	Injection, cyclophosphamide, not otherwise specified, 5 mg	5 mg	4/1/2024	N/A	cyclophosphamide for injection, for intravenous use	Indicated for the treatment of: Malignant Diseases: malignant lymphomas: Hodgkin's disease, lymphocytic lymphoma, mixed-cell type	2,500	N/A	N/A	N/A	Y	Y		3/22/2024
Drugs	J9100	Injection, cytarabine, 100 mg	100 mg	1/1/2000	N/A	cytarabine injection	In combination with other approved anticancer drugs, is indicated for remission induction in acute non-lymphocytic leukemia of adults and pediatric patients. It has also been found useful in the treatment of acute lymphocytic leukemia and the blast phase of chronic myelocytic leukemia. Intrathecal administration of cytarabine injection (preservative-free preparations only) is indicated in the prophylaxis and treatment of meningeal leukemia.	35	N/A	N/A	N/A	Y	Y		7/2/2018
Biologicals	J9118	Injection, calaspargase pegol-mknl, 10 units	10 units	10/1/2019	Asparlas™	calaspargase pegol-mknl injection, for intravenous use	Indicated for the treatment of acute lymphoblastic leukemia in pediatric and young adult patients age 1 month to 21 years.	1,500	1 month	21 years	N/A	Y	Y		12/3/2019

Physician Administered Drug Program Catalog

- Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
- 11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
- The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

North Carolina Division of Health Benefits
Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **.
•11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
•The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
•The HCPCS Code effective date represents the date the HCPCS code was established
•Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
•Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website: https://www.cms.gov/medicare/coding-billing/ncci-medicaid/medicaid-ncci-edit-files

Drugs	S0013	Esketamine, nasal spray, 1 mg	1 mg	1/1/2021	Spravato™	esketamine nasal spray	• Indicated, in conjunction with an oral antidepressant, for the treatment of treatment-resistant depression (TRD) in adults. • Indicated for depressive symptoms in adults with major depressive disorder (MDD) with acute suicidal ideation or behavior. Limitations of Use: Spravato is not approved as an anesthetic agent. The safety and effectiveness of Spravato as an anesthetic agent have not been established.	728	18 years	N/A	N/A	Y	Y		12/28/2020
Drugs	S0028	Injection, famotidine, 20 mg	20 mg	1/1/2000	Pepcid®	famotidine injection	Indicated in some hospitalized patients with pathological hypersecretory conditions or intractable ulcers, or as an alternative to the oral dosage forms for short term use in patients who are unable to take oral medication for the following conditions: 1. Short term treatment of active duodenal ulcer. Most adult patients heal within 4 weeks; there is rarely reason to use famotidine at full dosage for longer than 6 to 8 weeks. Studies have not assessed the safety of famotidine in uncomplicated active duodenal ulcer for periods of more than eight weeks. 2. Maintenance therapy for duodenal ulcer patients at reduced dosage after healing of an active ulcer. Controlled studies in adults have not extended beyond one year. 3. Short term treatment of active benign gastric ulcer. Most adult patients heal within 6 weeks. Studies have not assessed the safety or efficacy of famotidine in uncomplicated active benign gastric ulcer for periods of more than 8 weeks. 4. Short term treatment of gastroesophageal reflux disease (GERD). Famotidine is indicated for short term treatment of patients with symptoms of GERD. 5. Famotidine is also indicated for the short term treatment of esophagitis due to GERD including erosive or ulcerative disease diagnosed by endoscopy. 6. Treatment of pathological hypersecretory conditions (e.g., Zollinger-Ellison Syndrome, multiple endocrine adenomas).	62	1 year	N/A	N/A	Y	Y	11/2020 Coverage effective 1/1/2019 per DHB request 11/2023 Permanent code S0028 effective 12/1/2023 per DHB request	11/10/2023
