North Carolina Division of Health Benefits Physician Administered Drug Program Catalog

•Unless otherwise indicated, the catalog contains procedure codes representing drugs, biologics, devices and vaccines which are only covered for FDA approved indications. Covered indications that are not FDA approved are identified with **

- •11 digit National Drug Codes (NDCs) are required to be billed along with their corresponding procedure code. Drugs and biologics must be classified as CMS covered outpatient drugs from a labeler/manufacturer participating in the Medicaid Drug Rebate Program (MDRP).
- •The Max Daily Units for radiopharmaceuticals represents one therapeutic dose or diagnostic dose.
 •The HCPCS Code effective date represents the date the HCPCS code was established
- Procedure codes for covered devices and vaccines are not required to be from a rebating labeler/manufacturer as they are not classified as covered outpatient drugs.
- •Medically Unlikely Edits (MUEs) are used by NC Medicaid to reduce the improper payment for medical drug claims. A MUE for a HCPCS/CPT code is the maximum units of service that a provider would report under most circumstances for a single beneficiary on a single date of service. Not all HCPCS/CPT codes have a MUE. CMS publishes MUE values on its website:

Drugs	J8499	Prescription drug, oral, non- chemotherapeutic, Not Otherwise Specified	2 grams	1/1/2000	Flagyi*	metronidazole, oral	Approved indications for use in the PADP: - Symptomatic Trichomoniasis: Flagyl is indicated for the treatment of T. vaginalis infection in females and males when the presence of the trichomonad has been confirmed by appropriate laboratory procedures (wet smears and/or cultures). - Asymptomatic Trichomoniasis: Flagyl is indicated in the treatment of asymptomatic T. vaginalis infection in females when the organism is associated with endocervicitis, cervicitis, or cervical erosion. Since there is evidence that presence of the trichomonad can interfere with accurate assessment of abnormal cytological smears, additional smears should be performed after enalication of the parasite. - Treatment of Asymptomatic Sexual Partners: T. vaginalis infection is a venereal disease. Therefore, asymptomatic sexual partners of treated patients should be treated simultaneously if the organism has been found to be present, in order to prevent reinfection of the partner. The decision as to whether to treat an asymptomatic male partner who has a negative culture one for whom no culture has been attempted is an individual one. In making this decision, it should be noted that there is evidence that a woman may become reinfected if the sexual partner is not treated. Also, since there can be considerable difficulty in isolating the organism from the asymptomatic male carrier, negative smears and cultures cannot be relied upon in this regard. In any event, the sexual partner should be treated with Flagyl in cases of reinfection.	2	N/A	N/A	N/A	Y	Y		9/10/2020

Drugs	J1940	Injection, furosemide, up to 20 mg	up to 20 mg	1/1/2000	Lasix®	furosemide injection	Indicated for the treatment of edema associated with congestive heart failure, cirrhosis of the liver, and renal disease, including the nephrotic syndrome. Furosemide is particularly useful when an agent with greater diuretic potential is desired. As an adjunct in the treatment of pulmonary edema. The intravenous administration of furosemide is indicated when a rapid onset of diuresis is desired. If gastrointestinal absorption is impaired or oral medication is not practical for any reason, furosemide is indicated by the intravenous or intramuscular route. Parenteral use should be replaced with oral furosemide as soon as practical.	310	N/A	N/A	N/A	Y	Y		10/26/2018

Drugs	J3410	Injection, hydroxyzine HCl, up to 25 mg	up to 25 mg	1/1/2000	Vistaril*	hydroxyzine hydrochloride injection for intramuscular use	The total management of anxiety, tension, and psychomotor agitation in conditions of emotional stress requires in most instances a combined approach of psychotherapy and chemotherapy. Hydroxyzine has been found to be particularly useful for this latter phase of therapy in its ability to render the disturbed patient more amenable to psychotherapy in long term treatment of the psychoneurotic and psychotic, although it should not be used as the sole treatment of psychosis or of clearly demonstrated cases of depression. Also useful in alleviating the manifestations of anxiety and tension as in the preparation for dental procedures and in acute emotional problems. It has also been recommended for the management of anxiety associated with organic disturbances and as adjunctive therapy in alchobisim and allergic conditions with strong emotional overlay, such as in asthma, chronic urticaria, and pruritus. Hydroxyzine hydrochloride intramuscular solution is useful in treating the following types of patients when intramuscular administration is indicated: —The acute or chronic alcoholic with anxiety withdrawal symptoms or delirium tremens. —As pre-and postoperative and pre- and postspartum adjunctive medication to permit reduction in narcotic dosage, allay anxiety and control emesis. Hydroxyzine hydrochloride has also demonstrated effectiveness in controlling nausea and vomiting, excluding nausea and vomiting of pregnancy. Hydroxyzine benefits the cardiac patient by its ability to allay the associated anxiety and apprehension attendant to certain types of hearth disease. Hydroxyline is not known to interfere with the action of digitalis in any way and may be used concurrently with this agent.	240	N/A	N/A	N/A	Y	Υ		10/26/2018
